Neurotherapeutics

The Journal of the American Society for Experimental NeuroTherapeutics

Editor-in-Chief: M. Mouradian

- ▶ Publishes critical reviews of broad interest on the treatment of neurologic disorders by renowned experts.
- ▶ Covers emerging treatments for neurologic disorders.
- ▶ Publishes cutting edge original translational research in unmet medical needs for diseases of the nervous system.
- ▶ Explores the molecular underpinnings of neurologic diseases as rationale for targeted therapies.
- ▶ Provides a platform for publishing points-of-view by key opinion leaders on current hot topics.

Neurotherapeutics® is the journal of the American Society for Experimental NeuroTherapeutics (ASENT). Each issue provides critical reviews of an important topic relating to the treatment of neurological disorders, written by international authorities.

The Journal also publishes original research articles in translational neuroscience including descriptions of cutting edge therapies that cross disciplinary lines and represent important contributions to neurotherapeutics for medical practitioners and other researchers in the field.

Neurotherapeutics® delivers a multidisciplinary perspective on the frontiers of translational neuroscience, provides perspectives on current research and practice, and covers social and ethical as well as scientific issues.

Impact Factor: 4.676 (2015), Journal Citation Reports®, Thomson Reuters
