Cellular Oncology
The official journal of the International Society for Cellular Oncology
Editor-in-Chief: A. Geurts van Kessel

- Focuses on translational research
- Addresses the conversion of cell biology to clinical applications

Cellular Oncology publishes scientific contributions from various biomedical and clinical disciplines involved in basic and translational cancer research on the cell and tissue level, technical and bioinformatics developments in this area, and clinical applications. This includes a variety of fields like genome technology, micro-arrays and other high-throughput techniques, genomic instability, SNP, DNA methylation, signaling pathways, DNA organization, (sub)microscopic imaging, proteomics, bioinformatics, functional effects of genomics, drug design and development, molecular diagnostics and targeted cancer therapies, genotype-phenotype interactions.

A major goal is to translate the latest developments in these fields from the research laboratory into routine patient management. To this end Cellular Oncology forms a platform of scientific information exchange between molecular biologists and geneticists, technical developers, pathologists, (medical) oncologists and other clinicians involved in the management of cancer patients.

In vitro studies are preferentially supported by validations in tumor tissue with clinicopathological associations.

Impact Factor: 3.786 (2016), Journal Citation Reports®
