Computational Cognitive Science
Editor-in-Chief: D. Powers
Managing Editor: W. Daelemans; R. Leibbrandt

The Journal Computational Cognitive Science is a peer-reviewed open access journal published under the SpringerOpen brand. It is an international and interdisciplinary journal that provides a forum for cross-disciplinary research contributions and debate relating to all aspects of the computational modelling of cognitive theories, and the implementation of intelligent systems that implicitly or explicitly draw on or inform research across multiple cognitive science disciplines. Specific themes of interest include the acquisition of language and ontology, integrated models of sensory-motor perception and interaction, affect and emotion, gesture and expression, cognition and consciousness, and/or implemented or implementable systems based on computational or robotic models and cognitive or evolutionary theory. Contributions will overlap some or all of Artificial Intelligence, Autonomous Robotics, Behavioural Science, Biomedical Science, Brain Science, Cognitive Linguistics, Cognitive Psychology, Cognitive Neuroscience, Cognitive Systems, Computational Intelligence, Computational Psycholinguistics, Developmental and Evolutionary Robotics, Evolutionary and Developmental Biology, Human Factors Evaluation, Human Computer Interface, Image Processing, Intelligent Systems, Natural Language Learning, Neural Networks, Speech Processing, Theory of Computation, Theory of Mind, Virtual Reality, and the many other research foci, methodologies and application areas of Cognitive Science and Computational Intelligence.

Giving authors in their area of expertise the opportunity to publish open access

- High visibility thanks to unrestricted online access
- Rigorous peer-review and high-quality author services
- Creative Commons licensed – authors retain copyright
- Citation tracking and inclusion in bibliographic databases
- Easy compliance with open access mandates
