The *International Journal of Mechanical and Materials Engineering (IJMME)* is a peer-reviewed open access journal published under the SpringerOpen brand. It is an international and interdisciplinary journal that provides a forum for cross-disciplinary research contributions covering a broad spectrum of issues pertaining to the mechanical and machining properties of materials as well as materials science, and how they apply to materials used in equipment and structures. Important topics include: nanomaterial, material synthesis and characterization, principles of the micro-macro transition; elastic behavior; plastic behavior; high-temperature creep, fatigue, and fracture; as well as metals, polymers, ceramics, intermetallics, and their composites. Other areas of interest are: tribology, joining; mechanical behavior; environmental effects, machining; nonconventional machining, materials processing; constitutive relations; and microstructure property relationships. The journal also deals with problems of kinematics and dynamics of rigid bodies, theory of machines and mechanisms, vibration and balancing of machine parts, stability of mechanical systems, mechanics of continuum, strength of materials, fatigue of materials, hydromechanics, aerodynamics, thermodynamics, heat transfer, thermo fluids, nanofluids, energy systems, renewable and alternative energy, engine, fuels, and experimental methods in dynamics. The journal accepts *Reviews, Theoretical and Experimental Works as contributions*. The journal also publishes special issues with selected papers from relevant conferences.
