Renewables: Wind, Water, and Solar
Editor-in-Chief: C. Nayar

- A platform for Academia and Industry to contribute alike
- Addresses environmental and sustainable issues with regard to renewables and water treatment and delivery
- Partnering with international academia and industry to get the best of both
- Rapid and effective dissemination of knowledge in the area to the world

Renewables: Wind, Water, and Solar is a peer-reviewed open access journal published under the SpringerOpen brand. It provides a multidisciplinary and international forum for the rapid dissemination of knowledge of the various ideas, products, technologies, discussions of policy and regulatory issues that affect renewable energy technologies and their implementation. The journal serves as a forum for specialists from both academic institutions, research laboratories and industries involved in R&D projects, system implementation and policy formulations in this field. Peer-reviewed original research papers as well as articles which present quality analysis or incremental improvements to past work are published in the Journal. Review papers prepared in consultation with the Editor are also accepted.

Giving authors in their area of expertise the opportunity to publish open access
- High visibility thanks to unrestricted online access
- Rigorous peer-review and high-quality author services
- Creative Commons licensed – authors retain copyright
- Citation tracking and inclusion in bibliographic databases
- Easy compliance with open access mandates
