Modeling Earth Systems and Environment
Executive Editor-in-Chief: M.N. Islam
Editors-in-Chief: J. Aherne; D. Kitazawa; R.J. Schotting

- Merges modelers from various fields
- Endorses emerging topics related to our earth systems and environment
- Supports decision making by also dealing with modeling of anthropogenic or social phenomena and projections
- Edited by an international and interdisciplinary team of modeling experts

The peer-reviewed journal *Modeling Earth Systems and Environment* (MESE) provides a unique publication platform by discussing interdisciplinary problems and approaches through modeling. The focus of MESE is on modeling in earth and environment related fields, such as: earth and environmental engineering; climate change; hydrogeology; aquatic systems; atmospheric research and water; land use and vegetation change; modeling of forest and agricultural dynamics; and economic and energy systems. Furthermore, the journal combines these topics with modeling of anthropogenic or social phenomena and projections to be used by decision makers.
