Undergraduate Topics in Computer Science

Series Ed.: I. Mackie

'Undergraduate Topics in Computer Science' (UTiCS) delivers high-quality instructional content for undergraduates studying in all areas of computing and information science. From core foundational and theoretical material to final-year topics and applications, UTiCS books take a fresh, concise, and modern approach and are ideal for self-study or for a one- or two-semester course. The texts are all authored by established experts in their fields, reviewed by an international advisory board, and contain numerous examples and problems, many of which include fully worked solutions.

The UTiCS concept relies on high-quality, concise books in softback format, and generally a maximum of 275-300 pages. For undergraduate textbooks that are likely to be longer, more expository, Springer continues to offer the highly regarded Texts in Computer Science series, to which we refer potential authors.

Recently published:

T.Æ. Mogensen

Introduction to Compiler Design

B. Upadhyaya

Programming with Scala

Language Exploration

P. Sestoft

Programming Language Concepts

Upcoming Volumes:

K.D. Lee

Foundations of Programming Languages

P.C. Ölveczky

Designing Reliable Distributed Systems

A Formal Methods Approach Based on Executable Modeling in Maude

J.T. Streib, T. Soma

Guide to Data Structures

A Concise Introduction Using Java

W. Ertel

Introduction to Artificial Intelligence

T. Jenkyns, B. Stephenson

Fundamentals of Discrete Math for Computer Science

A Problem-Solving Primer
