Requirements Engineering

Editor-in-Chief: P. Loucopoulos

- ▶ Free app available on iTunes and Google Play Store
- ▶ Includes Theories and models relevant to requirements engineering
- ▶ Explores the intersection of requirements engineering with business engineering
- ▶ Assesses the states of practice, including evaluation of different approaches in industrial-size projects: papers on problems in requirements

The journal provides a focus for the dissemination of new results about the elicitation, representation and validation of requirements of software intensive information systems or applications. Theoretical and applied submissions are welcome, but all papers must explicitly address:

- the practical consequences of the ideas for the design of complex systems
- how the ideas should be evaluated by the reflective practitioner

The journal is motivated by a multi-disciplinary view that considers requirements not only in terms of software components specification but also in terms of activities for their elicitation, representation and agreement, carried out within an organisational and social context. To this end, contributions are sought from fields such as software engineering, information systems, occupational sociology, cognitive and organisational psychology, human-computer interaction, computer-supported cooperative work, linguistics and philosophy for work addressing specifically requirements engineering issues.

Impact Factor: 2.381 (2016), Journal Citation Reports®
