Theory and Applications of Computability

In cooperation with the association Computability in Europe

Series Editors: L. Bienvenu, P. Bonizzoni, V. Brattka, E. Mayordomo, P. Panangaden

Books published in this series will be of interest to the research community and graduate students, with a unique focus on issues of computability. The perspective of the series is multidisciplinary, recapturing the spirit of Turing by linking theoretical and real-world concerns from computer science, mathematics, biology, physics, and the philosophy of science. The series includes research monographs, advanced and graduate texts, and books that offer an original and informative view of computability and computational paradigms.

Recently published:

R.I. Soare

Turing Computability

Theory and Applications

J. Longley, D. Normann

Higher-Order Computability

D.S. Bridges, L.S. Viță

Apertness and Uniformity

A Constructive Development

Upcoming Volumes:

S.B. Cooper, M.I. Soskova (Eds.)

The Incomputable

Journeys Beyond the Turing Barrier
