Authors are invited to submit their manuscripts on the new submission and review tracking site: https://www.editorialmanager.com/jofa/.

The average time interval for the initial review process, if it involves both editorial and peer reviews, is approximately 3 weeks. Occasionally, there are unavoidable delays, usually because of multiple reviews or several revisions on a manuscript. Decisions conveyed may be acceptance with or without revision, non-acceptance with encouragement to make revisions and resubmit; non-acceptance with encouragement to resubmit in another format (e.g., letter to the editor), or rejection.

The Journal of Frailty & Aging publishes Original Papers, Reviews, Brief Reports, Editorials, Letters to the Editor, and Book Reviews. Authors of Review papers are encouraged to contact the Editor, Matteo Cesari (macesari@gmail.com) with a pre-submission enquiry on their proposed topic and scope prior to submission.

Brief Reports are research investigation or clinical experience reports whose findings are somewhat preliminary or a clinical study reporting on narrowly focused or limited findings. Description of complex clinical cases (with aspects of novelty and/or didactical purposes) may be presented in this format, too.

Letters to the Editor should be brief commentaries on published articles in the Journal of Frailty & Aging proposing alternative interpretations, different data, and/or things to ponder.

**ABSTRACT**

The Journal of Frailty & Aging requires that abstracts of manuscripts submitted for the Original papers be in a structured form conforming to guidelines published in the Journal of the American Medical Association (1998;280:23–24). See also Annals of Internal Medicine (1990;113:69–76). Abstracts (maximum 300 words) should include the following headings: Background, Objectives, Design, Setting, Participants, Intervention (if any), Measurements, Results, and Conclusions. Specify the sample size. Emphasize clinical relevance in the abstract’s conclusion. Failure to adhere to this format will delay or unduly prolong the review process. Following the abstract conclusion, list 3 to 5 key words to be used for indexing.

For Reviews and Brief Reports, a narrative abstract (maximum 250 words) is required.

Editorials, Letters to the Editor, and Book Reviews do not require an abstract.

**KEY WORDS**

Authors should include 3 to 5 key words at the end of the abstract for all papers except Editorials, Letters to the Editor, and Book Reviews.

**CONFLICT OF INTEREST DISCLOSURE FORM**

All potential benefits in any form from a commercial party related directly or indirectly to the subject of this manuscript or any of the authors must be acknowledged. For each source of funds, both the research funder and the grant number should be given. All authors must complete the Copyright Form individually even if an author has no conflict of interest to disclose. If all participating authors declare no conflict of interest, it is still required for each author to include a disclosure statement in the manuscript text. All forms must be completed as instructed from each author and there must be a disclosure statement included in the manuscript text for each author before the manuscript can be sent out for peer review.

**PERMISSIONS**

Use or reproduction of materials from other sources (e.g., journal, book) must be accompanied by a statement or document from both author and publisher giving permission to the Journal of Frailty & Aging for reproduction.

**REFERENCES**

Citation. Reference citations in the text should be identified by numbers in brackets.

Reference list. The list of references should only include works that are cited in the text and that have been published or accepted for publication. Personal communications and unpublished works should only be mentioned in the text. Do not use footnotes or endnotes as a substitute for a reference list. The entries in the list should be numbered consecutively. Always use the standard abbreviation of a journal’s name according to the ISSN List of Title Word Abbreviations, see www.isssn.org/2-22661-LTWA-online.php

**PUBLICATION FEES**

All the articles exceeding 2 printed pages of the journal will be charged 306 euros/328 US dollars per extra page.

**PAPER LENGTH**

Original Research: Limit the manuscript to a maximum of 2,500 text words, 5 graphics (tables, figures, or appendices), and 30 references. A structured abstract is required (see under Abstract).

Review: Limit the manuscript to a maximum of 3,500 text words, 5 graphics (tables, figures, or appendices), and 60 references. A narrative abstract is required (see under Abstract).

Brief Reports: Limited to 1,500 text words, 2 graphics (tables, figures, or appendices), and 15 references, plus a brief unstructured abstract (see under Abstract).

Letters to the Editor: Limited to 800 text words, 1 graphic (tables, figures, or appendices), and 5 references. No abstract is required.

Book Reviews: Limited to 800 text words, 1 graphic (tables, figures, or appendices), and 5 references. No abstract is required.

Editorials, Special Articles: These papers are specifically invited by the Editor-in-Chief to a researcher or group of researchers with the aim of developing a specific theme of interest for the journal. A narrative abstract (see under Abstract) may be required according to the length of the contribution. The size of this type of contributions is decided ad hoc with the Editor-in-Chief.

**PERMISSION TO REPRINTS**

Requests for permission to republish material previously printed in the Journal of Frailty & Aging in another journal should be directed to Carine Giry (carine.giry@serdi-publisher.com).

**PERMISSIONS FOR REPRINTS**

The Journal of Frailty & Aging does not consider any publication of which the author has not signed the Copyright Form. The Copyright Form is to be signed by all authors before the manuscript can be considered for publication and carried the following statement: ‘The undersigned authors of this Original Research/Review/Book - Chapter/Brief Report/Letter to the Editor acknowledge, that the manuscript is an original work, and that all the authors have had an opportunity to review this manuscript”.
Please, visit the journal website (www.jfrailtyaging.com) for the more information.

**PUBLICATION ETHICS**

It is necessary to agree upon standards of expected ethical behavior for all parties involved in the act of publishing: the Authors, the Editor-in-Chief, the Peer-Reviewers and the Publisher.

The following ethic statements are based on COPE’s Best Practice Guidelines for Journal Editors and on the International Committee of Medical Journal Editors (« Uniform Requirements for Manuscripts Submitted to Biomedical Journals », February 2000).

**Publication decisions**

The Editor-in-Chief of the Journal of Frailty & Aging is responsible for deciding which of the articles submitted to the journal should be published. The Editor-in-Chief may be guided by the policies of the journal’s editorial board and constrained by such legal requirements as shall then be in force regarding libel, copyright infringement and plagiarism. The Editor-in-Chief may confer with other editors or reviewers in making this decision. They evaluate manuscripts for their intellectual content without regard to race, gender, sexual orientation, religious belief, ethnic origin, citizenship, or political philosophy of the authors. The editorial staff must not disclose any information about a submitted manuscript to anyone other than the corresponding author, reviewers, other editorial advisers, and the publisher, as appropriate. Unpublished materials disclosed in a submitted manuscript must not be used in an Editor’s own research without the express written consent of the Author.

**Duties of Authors**

Authors of contributions and studies should present an accurate account of the work performed as well as an objective discussion of its significance. Underlying data should be represented accurately in the paper. A paper should contain sufficient detail and references to permit others to replicate the work. Fraudulent or knowingly inaccurate statements constitute unethical behavior and are unacceptable.

Authors are asked to provide the raw data in connection with a paper for editorial review. The authors should ensure that they have written entirely original works, and if the authors have used the work and/or words of others that this has been appropriately cited or quoted.

Authors should not submit manuscripts describing essentially the same research in more than one journal or primary publication, or previously published elsewhere (whether in print or online). Submitting the same manuscript to more than one journal concurrently constitutes unethical publishing behaviour and is unacceptable.

Proper acknowledgment of the work of others must always be given. Authors should cite publications that have been influential in determining the nature of the reported work.

Authorship should be limited to those who have made a significant contribution to the conception, design, execution, or interpretation of the reported study. All those who have made significant contributions should be listed as co-authors. Where there are others who have participated in certain substantive aspects of the research project, they should be acknowledged or listed as contributors.

The corresponding author should ensure that all appropriate co-authors and no inappropriate co-authors are included on the paper, and that all co-authors have seen and approved the final version of the paper and have agreed to its submission for publication.

All authors should disclose in their manuscript any financial or other substantive conflict of interest that might be construed to influence the results or interpretation of their manuscript. All sources of financial support for the project should be disclosed.

When an author discovers a significant error or inaccuracy in his/her own published work, it is the author’s obligation to promptly notify the journal editor or publisher and cooperate with the editor to retract or correct the paper.

**Conflicts of Interest**

Public trust in the peer review process and the credibility of published articles depend in part on how well conflict of interest is handled during writing, peer review, and editorial decision making. Conflict of interest exists when an author (or the author’s institution), reviewer, or editor has financial or personal relationships that inappropriately influence (bias) his or her actions (such relationships are also known as dual commitments, competing interests, or competing loyalties). These relationships vary from those with negligible potential to those with great potential to influence judgment, and not all relationships represent true conflict of interest. The potential for conflict of interest can exist whether or not an individual believes that the relationship affects his or her scientific judgment. Financial relationships (such as employment, consultancies, stock ownership, honoraria, paid expert testimony) are the most easily identifiable conflicts of interest and the most likely to undermine the credibility of the journal, the authors, and of science itself. However, conflicts can occur for other reasons, such as personal relationships, academic competition, and intellectual passion.

**Statement of Informed Consent**

Patients have a right to privacy that should not be infringed without informed consent. Identifying information, including patients’ names, initials, or hospital numbers, should not be published in written descriptions, photographs, and pedigrees unless the information is essential for scientific purposes and the patient (or parent or guardian) gives written informed consent for publication. Informed consent for this purpose requires that a patient who is identifiable be shown the manuscript to be published. Authors should identify individuals who provide writing assistance and disclose the funding source for this assistance. Identifying details should be omitted if they are not essential. Complete anonymity is difficult to achieve, however, and informed consent should be obtained if there is any doubt. For example, masking the eye region in photographs of patients is inadequate to protect anonymity, such as in genetic pedigrees, authors should provide assurance that alterations do not distort scientific meaning and editors should so note. The requirement for informed consent should be included in the journal’s instructions for authors. When informed consent has been obtained it should be indicated in the published article.

**Statement of Human and Animal Rights**

When reporting experiments on human subjects, authors should indicate whether the procedures followed were in accordance with the ethical standards of the responsible committee on human experimentation (institutional and national) and with the Helsinki Declaration of 1975, as revised in 2000. If doubt exists whether the research was conducted in accordance with the Helsinki Declaration, the authors must explain the rationale for their approach, and demonstrate that the institutional review body explicitly approved the doubtful aspects of the study. When reporting experiments on animals, authors should be asked to indicate whether the institutional and national guide for the care and use of laboratory animals was followed.
