CONTENTS

Preface ................................................................................................ xiii

1. Tissue Scarring: Lessons from Wound Healing ................................. 1
   Mohammed S. Razzaque, Moussa El-Hallak, Abdallah Azouz
   and Takashi Taguchi
   Wound Healing ............................................................................ 1
   Fetal Wound Healing .................................................................. 2
   Tissue Scarring .......................................................................... 3

2. Pathological Significance of Renal Expression
   of Proinflammatory Molecules .................................................... 9
   Takashi Wada, Mohammed S. Razzaque, Kouji Matsushima,
   Takashi Taguchi and Hitoshi Yokoyama
   Participants in Renal Inflammation ............................................. 10
   Major Mediators Involved in Renal Inflammation ...................... 11
   Leukocyte Trafficking During Renal Inflammation ..................... 12
   Chemokine Systems in the Kidney from Acute Injury
   to Renal Scarring: The Chemokine Cascade ............................... 12
   The MCP-1/CCL2-TGF-β Axis: A Common Regulatory
   Pathway of Chronic Renal Inflammation Resulting
   in Renal Scarring ..................................................................... 13
   Molecular Basis of Inflammation in Various Renal Diseases ....... 14
   Effectiveness of Anti-Chemokine/Cytokine Therapy
   and Its Possible Therapeutic Implications in Renal Diseases ....... 21

3. Oxidative Stress, Lipoproteins and Angiotensin II:
   The Unholy Triad in the Pathogenesis of Renal Fibrosis ............... 27
   Jan Galle, Thomas Quaschning and Stefan Seibold
   What Generates Oxidative Stress? ............................................. 28
   Biological Effects of Oxidative Stress ...................................... 28
   Biological Effects of Oxidative Stress on Renal Fibrosis ............ 28
   Oxidative Stress and Changes in Cell Number and Cell Size ....... 30
   Oxidative Stress and Proteinuria ............................................. 30
   Functional Consequence of Ang II-Induced Oxidative Stress
   in Renal Tissue ....................................................................... 31
   Lipoproteins and Oxidative Stress .......................................... 31
   Functional Consequence of OxLDL-Induced Oxidative Stress
   in Renal Tissue ..................................................................... 32

4. Involvement of NF-κB in Renal Inflammation and Sclerosis .......... 38
   Laurent Baud, Bruno Fouqueray, Agnes Bellocq,
   Jean-Philippe Haymann and Julie Peltier
   Structure and Activation Pathways of NF-κB ............................ 38
   Origin of NF-κB Activation in Inflammatory Reaction ............... 39
   Monitoring of NF-κB Activation ............................................. 39
   Role of NF-κB in the Development of Renal Inflammation ....... 40
Role of NF-κB in the Development of Renal Fibrosis ......................... 40
NF-κB Pathway As a Target for New Anti-Inflammatory
and Anti-Fibrotic Treatments .......................................................... 41

5. Low-Density Lipoprotein and Glomerulosclerosis ..................... 45
   Hyun Soon Lee
   Effects of Lipoprotein Abnormalities on the Glomerulus
   in Experimental Animals ............................................................... 46
   Effects of LDL on Mesangial Cells ............................................ 46
   Effects of LDL on Glomerular Epithelial Cells ....................... 53

6. Molecular Developments in the Treatment of Renal Fibrosis .......... 61
   Gavin J. Becker and Tim D. Hewitson
   Initiation ..................................................................................... 62
   Fibrogenesis .............................................................................. 63
   Treatment Options Available and Developing ....................... 66
   Future Perspectives ............................................................... 70

7. Myocardial Infarction and Cardiac Fibrogenesis ....................... 77
   Shozo Kusachi and Yoshifumi Ninomiya
   Cellular and Molecular Events after Induction
   of the Myocardial Infarction ..................................................... 78
   ECM Assembly ........................................................................ 81
   ECM Components of Basement Membrane ............................ 83
   Proteoglycans ......................................................................... 84
   Matrix Proteins ....................................................................... 85
   Mediators Affecting ECM Reformation ................................. 87
   Noninfarct Zone ...................................................................... 88
   Intervention in Infarct Fibrogenesis ...................................... 88

8. Cardiac Fibrosis and Aging ....................................................... 97
   Serge Masson, Roberto Latini, Monica Salio and Fabio Fiordaliso
   Age-Dependent Cardiac Fibrosis ............................................. 97
   Why Does Collagen Accumulate in the Aged Myocardium? .... 99
   Attenuation of Myocardial Stiffness During Aging .................. 100
   Diastolic Dysfunction and Failure ....................................... 101

9. Matrix Remodeling and Atherosclerosis Effect of Age .............. 104
   Ladislao Robert
   The Genesis of the Disease ....................................................... 105
   Impact of Cell Biology ............................................................ 105
   Other Etiological Factors ........................................................ 106
   Role of Immune Factors ........................................................ 107
   Role of Elastolysis .................................................................. 107
   Mechanism of Elastolysis ...................................................... 108
Role of Lipids and of Calcium ........................................................... 110
Nature of Vascular Fibrosis ............................................................... 111
Role of Proteoglycans ........................................................................ 112
Role of Receptors .............................................................................. 112

10. Molecular and Cellular Aspects of Liver Fibrosis ............................. 118
Norifumi Kawada
Stellate Cell As a Principal Player of Liver Fibrosis ............................ 118
Novel Therapeutic Strategy for Preventing Liver Fibrosis ................. 119

11. Recent Therapeutic Developments in Hepatic Fibrosis ..................... 122
Ichiro Shimizu
Hepatocyte Injury and Oxidative Stress ............................................. 123
HSC Activation and Growth Factors ................................................. 125
Antifibrotic Therapy .......................................................................... 128

12. Reversibility of Liver Fibrosis: Role of Matrix Metalloproteinases ...... 143
Iao Okazaki, Tetsu Watanabe, Maki Niioka, Yoshihiko Sugiooka and Yutaka Inagaki
Reversibility of Human Liver Fibrosis ............................................... 144
Reversibility of Experimental Liver Fibrosis ....................................... 145
Biological Collagenase Activity in Recovery Stage of Liver Fibrosis .................................................. 146
Gene Expression of MMPs and TIMPs in Both Progressive Stage of Liver Fibrosis and Its Recovery .......................... 148
Stem/Progenitor Cells Expressing MMP-13 mRNA Appear in Recovery from Liver Cirrhosis .......................... 152
Different Mechanisms in Recovery from Liver Fibrosis and That from Liver Cirrhosis .......................... 153

Wesam Ahmed, Mohammed S. Razzaque and Takashi Taguchi
Apoptosis ......................................................................................... 161
Mechanisms of Apoptosis ................................................................. 161
The Intrinsic (Mitochondrial) Death Pathway ................................... 162
The Extrinsic (Receptor Mediated) Death Pathway ........................... 164
Cross Talk between Pathways ......................................................... 165
Bcl-2 Proteins and Apoptosis ............................................................ 166
Signal Transduction (MAP Kinase) Pathways and Apoptosis .......... 166
PI3K/AKT Pathway and Apoptosis ................................................... 166
Other Modes of Cell Death .............................................................. 168
Paraptosis ......................................................................................... 170
Apoptosis and Tissue Scarring ......................................................... 170
