Preface	vii
Acknowledgements	ix
Guiding the Reader	xv
Index of Notations	xvii
Introduction	1
1 How Many Prime Numbers Are There?	3
I Euclid's Proof	3
II Goldbach Did It Too!	6
III Euler's Proof	8
IV Thue's Proof	9
V Three Forgotten Proofs	10
A Perott's Proof	10
B Auric's Proof	11
C Métrod's Proof	11
VI Washington's Proof	11
VII Furstenberg's Proof	12
2 How to Recognize Whether a Natural Number is a Prime	15
I The Sieve of Eratosthenes	16

II	Some Fundamental Theorems on Congruences	17
A	Fermat's Little Theorem and Primitive Roots Modulo a Prime	17
B	The Theorem of Wilson	21
C	The Properties of Giuga and of Wolstenholme	21
D	The Power of a Prime Dividing a Factorial	24
E	The Chinese Remainder Theorem	26
F	Euler's Function	28
G	Sequences of Binomials	33
H	Quadratic Residues	37
III	Classical Primality Tests Based on Congruences	39
IV	Lucas Sequences	44
V	Primality Tests Based on Lucas Sequences	63
VI	Fermat Numbers	70
VII	Mersenne Numbers	75
VIII	Pseudoprimes	88
A	Pseudoprimes in Base 2 (psp)	88
B	Pseudoprimes in Base a (psp(a))	92
C	Euler Pseudoprimes in Base a (eppsp(a))	95
D	Strong Pseudoprimes in Base a (sppsp(a))	96
IX	Carmichael Numbers	100
X	Lucas Pseudoprimes	103
A	Fibonacci Pseudoprimes	104
B	Lucas Pseudoprimes (lpsp(P, Q))	106
C	Euler-Lucas Pseudoprimes (elpsp(P, Q)) and Strong Lucas Pseudoprimes (slpsp(P, Q))	106
D	Carmichael–Lucas Numbers	108
XI	Primality Testing and Factorization	109
A	The Cost of Testing	110
B	More Primality Tests	111
C	Titanic and Curious Primes	119
D	Factorization	122
E	Public Key Cryptography	126
3	Are There Functions Defining Prime Numbers?	131
I	Functions Satisfying Condition (a)	131
II	Functions Satisfying Condition (b)	137
III	Prime-Producing Polynomials	138
A	Prime Values of Linear Polynomials	139

	B	On Quadratic Fields	140
	C	Prime-Producing Quadratic Polynomials	144
	D	The Prime Values and Prime Factors Races . .	148
	IV	Functions Satisfying Condition (c)	151
4		How Are the Prime Numbers Distributed?	157
	I	The Function $\pi(x)$	158
		A History Unfolding	159
		B Sums Involving the Möbius Function	172
		C Tables of Primes	173
		D The Exact Value of $\pi(x)$ and Comparison with $x/\log x$, $\text{Li}(x)$, and $R(x)$	174
		E The Nontrivial Zeros of $\zeta(s)$	177
		F Zero-Free Regions for $\zeta(s)$ and the Error Term in the Prime Number Theorem	180
		G Some Properties of $\pi(x)$	181
		H The Distribution of Values of Euler's Function	183
	II	The n th Prime and Gaps Between Primes	184
		A The n th Prime	185
		B Gaps Between Primes	186
	III	Twin Primes	192
	IV	Prime k -Tuplets	197
	V	Primes in Arithmetic Progression	204
		A There Are Infinitely Many!	204
		B The Smallest Prime in an Arithmetic Progression	207
		C Strings of Primes in Arithmetic Progression . .	209
	VI	Goldbach's Famous Conjecture	211
	VII	The Distribution of Pseudoprimes and of Carmichael Numbers	216
		A Distribution of Pseudoprimes	216
		B Distribution of Carmichael Numbers	218
		C Distribution of Lucas Pseudoprimes	220
5		Which Special Kinds of Primes Have Been Considered?	223
	I	Regular Primes	223
	II	Sophie Germain Primes	227
	III	Wieferich Primes	230
	IV	Wilson Primes	234

V	Repunits	235
VI	Numbers $k \times b^n \pm 1$	237
VII	Primes and Second-Order Linear Recurrence Sequences	243
6	Heuristic and Probabilistic Results About Prime Numbers	249
I	Prime Values of Linear Polynomials	250
II	Prime Values of Polynomials of Arbitrary Degree . . .	253
III	Polynomials with Many Successive Composite Values .	261
IV	Partitio Numerorum	263
	Appendix 1	269
	Appendix 2	275
	Conclusion	279
	Bibliography	281
	Web Site Sources	325
	Primes up to 10,000	327
	Index of Tables	331
	Index of Records	333
	Index of Names	335
	Subject Index	349
