Preface to Volume Two of the Second Edition of *Bergey's Manual® of Systematic Bacteriology* ................................................. ix
Preface to the First Edition of *Bergey's Manual® of Systematic Bacteriology* ............................................. xi
Preface to the First Edition of *Bergey's Manual® of Determinative Bacteriology* ......................................................... xiii
Contributors ........................................................................... xix

Class I. *Alphaproteobacteria* .............................................. 1
Order I. *Rhodospirillales* .................................................. 1
  Family I. *Rhodospirillaceae* ......................................... 1
    Genus I. *Rhodospirillum* ........................................... 1
    Genus II. *Azospirillum* ............................................. 7
    Genus III. *Levispirillum* .......................................... 27
    Genus IV. *Magnetospirillum* ..................................... 28
    Genus V. *Phaeospirillum* .......................................... 32
    Genus VI. *Rhodocista* .............................................. 33
    Genus VII. *Rhodospira* ............................................ 35
    Genus VIII. *Rhodovibrio* ......................................... 36
    Genus IX. *Roseospira* ............................................. 37
    Genus X. *Roseospirillum* ......................................... 39
    Genus XI. *Skermanella* ........................................... 39
    Genus Incertae Sedis XII. “*Sporospirillum*” .................. 40

Family II. *Acetobacteraceae* ............................................. 41
  Genus I. *Acetobacter* ............................................... 51
  Genus II. *Acidiphilium* ............................................ 54
  Genus III. *Acidisphaera* ........................................... 62
  Genus IV. *Acidocella* .............................................. 65
  Genus V. *Acidomonas* ............................................... 68
  Genus VI. *Asaia* .................................................... 69
  Genus VII. *Craurococcus* .......................................... 70
  Genus VIII. *Gluconacetobacter* .................................. 72
  Genus IX. *Gluconobacter* .......................................... 77
  Genus X. *Paracraurococcus* ....................................... 81
  Genus XI. *Rhodopila* ................................................ 83
  Genus XII. *Roseococcus* .......................................... 85
  Genus XIII. *Roseomonas* .......................................... 88
  Genus XIV. *Stella* .................................................. 93
  Genus XV. *Zavarzinia* ............................................. 95

Order II. *Rickettsiales* .................................................. 96
  Family I. *Rickettsiaceae* ......................................... 96
    Genus I. *Rickettsia* ............................................... 96
    Genus II. *Orientia* ............................................... 114

Family II. *Anaplasmataceae* ........................................... 117
  Genus I. *Anaplasma* .............................................. 117
  Genus II. *Ehrlichia* ............................................... 125
