# Contents

<b>1</b>	<b>Introduction</b> .....	1
1.1	No Arbitrage and Its Consequences .....	1
1.2	Exercises .....	11
<b>2</b>	<b>The Binomial Model for Stock Options</b> .....	13
2.1	The Basic Model .....	13
2.2	Why Is $\pi$ Called a Risk Neutral Probability? .....	21
2.3	More on Arbitrage .....	24
2.4	The Model of Cox-Ross-Rubinstein .....	25
2.5	Call-Put Parity Formula .....	27
2.6	Non Arbitrage Inequalities .....	29
2.7	Exercises .....	34
<b>3</b>	<b>The Binomial Model for Other Contracts</b> .....	41
3.1	Forward Contracts .....	41
3.2	Contingent Premium Options .....	43
3.3	Exchange Rates .....	45
3.4	Interest Rate Derivatives .....	55
3.5	Exercises .....	61
<b>4</b>	<b>Multiperiod Binomial Models</b> .....	65
4.1	The Labelling of the Nodes .....	65
4.2	The Labelling of the Processes .....	65
4.3	Generalized Quantities .....	66

4.4	Generalized Backward Induction Pricing Formula . . . . .	67
4.5	Pricing European Style Contingent Claims . . . . .	68
4.6	The CRR Multiperiod Model . . . . .	68
4.7	Jamshidian's Forward Induction Formula . . . . .	69
4.8	Application to CRR Model . . . . .	71
4.9	The CRR Option Pricing Formula . . . . .	73
4.10	Discussion of the CRR Formula . . . . .	75
4.11	Exercises . . . . .	78
<b>5</b>	<b>Hedging</b> . . . . .	<b>81</b>
5.1	Hedging . . . . .	81
5.2	Exercises . . . . .	88
<b>6</b>	<b>Forward and Futures Contracts</b> . . . . .	<b>89</b>
6.1	The Forward Contract . . . . .	89
6.2	The Futures Contract . . . . .	90
6.3	Exercises . . . . .	96
<b>7</b>	<b>American and Exotic Option Pricing</b> . . . . .	<b>97</b>
7.1	American Style Options . . . . .	97
7.2	Barrier Options . . . . .	99
7.3	Examples of the Application of Barrier Options . . . . .	102
7.4	Exercises . . . . .	106
<b>8</b>	<b>Path-Dependent Options</b> . . . . .	<b>109</b>
8.1	Notation for Non-Recombining Trees . . . . .	109
8.2	Asian Options . . . . .	110
8.3	Floating Strike Options . . . . .	112
8.4	Lookback Options . . . . .	113
8.5	More on Average Rate Options . . . . .	114
8.6	Exercises . . . . .	118

<b>9</b>	<b>The Greeks</b> .....	121
9.1	The Delta ( $\Delta$ ) of an Option .....	121
9.2	The Gamma ( $\Gamma$ ) of an Option .....	123
9.3	The Theta ( $\Theta$ ) of an Option .....	124
9.4	The Vega ( $\kappa$ ) of an Option .....	125
9.5	The Rho ( $\rho$ ) of an Option .....	125
9.6	Exercises .....	126
<b>10</b>	<b>Dividends</b> .....	127
10.1	Some Basic Results about Forwards .....	128
10.2	Dividends as Percentage of Spot Price .....	129
10.3	Binomial Trees with Known Dollar Dividends .....	132
10.4	Exercises .....	134
<b>11</b>	<b>Implied Volatility Trees</b> .....	135
11.1	The Recursive Calculation .....	136
11.2	The Inputs $V^{put}$ and $V^{call}$ .....	138
11.3	A Simple Smile Example .....	141
11.4	In General .....	144
11.5	The Barle and Cakici Approach .....	145
11.6	Exercises .....	149
<b>12</b>	<b>Implied Binomial Trees</b> .....	153
12.1	The Inputs .....	153
12.2	Time T Risk-Neutral Probabilities .....	154
12.3	Constructing the Binomial Tree .....	155
12.4	A Basic Theorem and Applications .....	158
12.5	Choosing Time T Data .....	161
12.6	Some Proofs and Discussion .....	164
12.7	Jackwerth's Extension .....	168
12.8	Exercises .....	170

<b>13 Interest Rate Models</b> .....	171
13.1 $P(0, T)$ from Treasury Data .....	172
13.2 $P(0, T)$ from Bank Data .....	174
13.3 The Ho and Lee Model .....	184
13.4 The Pedersen, Shiu and Thorlacius Model .....	189
13.5 The Morgan and Neave Model .....	191
13.6 The Black, Derman and Toy Model .....	193
13.7 Defaultable Bonds .....	205
13.8 Exercises .....	205
<b>14 Real Options</b> .....	209
14.1 Examples .....	210
14.2 Options on Non-Tradeable Assets .....	214
14.3 Correlation with Tradeable Assets .....	229
14.4 Approximate Methods .....	233
14.5 Exercises .....	235
<b>A The Binomial Distribution</b> .....	237
A.1 Bernoulli Random Variables .....	237
A.2 Bernoulli Trials .....	239
A.3 Binomial Distribution .....	239
A.4 Central Limit Theorem (CLT) .....	243
A.5 Berry-Esséen Theorem .....	245
A.6 Complementary Binomials and Normals .....	246
A.7 CRR and the Black and Scholes Formula .....	247
<b>B An Application of Linear Programming</b> .....	249
B.1 Incomplete Markets .....	250
B.2 Solutions to Incomplete Markets .....	251
B.3 The Duality Theorem of Linear Programming .....	253
B.4 The First Fundamental Theorem of Finance .....	257
B.5 The Duality Theorem .....	261
B.6 The Second Fundamental Theorem of Finance .....	264
B.7 Transaction Costs .....	266

<b>C</b>	<b>Volatility Estimation</b> .....	269
	C.1 Historical Volatility Estimation .....	270
	C.2 Implied Volatility Estimation .....	272
	C.3 Exercises .....	278
<b>D</b>	<b>Existence of a Solution</b> .....	279
	D.1 Farkas' Lemma .....	279
	D.2 An Application to the Problem .....	281
<b>E</b>	<b>Some Generalizations</b> .....	285
	E.1 Preliminary Observations .....	285
	E.2 Solution to System in van der Hoek's Method .....	287
	E.3 Exercises .....	288
<b>F</b>	<b>Yield Curves and Splines</b> .....	289
	F.1 An Alternative representation of Function (F.1) .....	290
	F.2 Imposing Smoothness .....	291
	F.3 Unknown Coefficients .....	291
	F.4 Observations .....	292
	F.5 Determination of Unknown Coefficients .....	293
	F.6 Forward Interest Rates .....	295
	F.7 Yield Curve .....	296
	F.8 Other Issues .....	296
	<b>References</b> .....	297
	<b>Index</b> .....	301
