
Contents

1	Introduction	1
	1.1 Integrals	1
	1.2 Random Walks	4
	Exercises	6
2	Brownian Motion	7
	2.1 Definition of Brownian Motion	7
	2.2 Simple Properties of Brownian Motion	8
	2.3 Wiener Integral	9
	2.4 Conditional Expectation	14
	2.5 Martingales	17
	2.6 Series Expansion of Wiener Integrals	20
	Exercises	21
3	Constructions of Brownian Motion	23
	3.1 Wiener Space	23
	3.2 Borel–Cantelli Lemma and Chebyshev Inequality	25
	3.3 Kolmogorov’s Extension and Continuity Theorems	27
	3.4 Lévy’s Interpolation Method	34
	Exercises	35
4	Stochastic Integrals	37
	4.1 Background and Motivation	37
	4.2 Filtrations for a Brownian Motion	41
	4.3 Stochastic Integrals	43
	4.4 Simple Examples of Stochastic Integrals	48
	4.5 Doob Submartingale Inequality	51
	4.6 Stochastic Processes Defined by Itô Integrals	52
	4.7 Riemann Sums and Stochastic Integrals	57
	Exercises	58

5	An Extension of Stochastic Integrals	61
	5.1 A Larger Class of Integrand	61
	5.2 A Key Lemma	64
	5.3 General Stochastic Integrals	65
	5.4 Stopping Times	68
	5.5 Associated Stochastic Processes	70
	Exercises	73
6	Stochastic Integrals for Martingales	75
	6.1 Introduction	75
	6.2 Poisson Processes	76
	6.3 Predictable Stochastic Processes	79
	6.4 Doob–Meyer Decomposition Theorem	80
	6.5 Martingales as Integrators	84
	6.6 Extension for Integrand	89
	Exercises	91
7	The Itô Formula	93
	7.1 Itô’s Formula in the Simplest Form	93
	7.2 Proof of Itô’s Formula	96
	7.3 Itô’s Formula Slightly Generalized	99
	7.4 Itô’s Formula in the General Form	102
	7.5 Multidimensional Itô’s Formula	106
	7.6 Itô’s Formula for Martingales	109
	Exercises	113
8	Applications of the Itô Formula	115
	8.1 Evaluation of Stochastic Integrals	115
	8.2 Decomposition and Compensators	117
	8.3 Stratonovich Integral	119
	8.4 Lévy’s Characterization Theorem	124
	8.5 Multidimensional Brownian Motions	129
	8.6 Tanaka’s Formula and Local Time	133
	8.7 Exponential Processes	136
	8.8 Transformation of Probability Measures	138
	8.9 Girsanov Theorem	141
	Exercises	145
9	Multiple Wiener–Itô Integrals	147
	9.1 A Simple Example	147
	9.2 Double Wiener–Itô Integrals	150
	9.3 Hermite Polynomials	155
	9.4 Homogeneous Chaos	159
	9.5 Orthonormal Basis for Homogeneous Chaos	164
	9.6 Multiple Wiener–Itô Integrals	168

9.7	Wiener–Itô Theorem	176
9.8	Representation of Brownian Martingales	180
	Exercises	183
10	Stochastic Differential Equations	185
10.1	Some Examples	185
10.2	Bellman–Gronwall Inequality	188
10.3	Existence and Uniqueness Theorem	190
10.4	Systems of Stochastic Differential Equations	196
10.5	Markov Property	197
10.6	Solutions of Stochastic Differential Equations	203
10.7	Some Estimates for the Solutions	208
10.8	Diffusion Processes	211
10.9	Semigroups and the Kolmogorov Equations	216
	Exercises	229
11	Some Applications and Additional Topics	231
11.1	Linear Stochastic Differential Equations	231
11.2	Application to Finance	234
11.3	Application to Filtering Theory	246
11.4	Feynman–Kac Formula	249
11.5	Approximation of Stochastic Integrals	254
11.6	White Noise and Electric Circuits	258
	Exercises	265
	References	267
	Glossary of Notation	271
	Index	273
