### Chapter 4. Single-Step Processes 76

- 4.1 Introduction 76
- 4.2 The basic process model and Little’s Law 77
- 4.3 Queuing systems 86
- 4.4 Transient queuing behavior 101
- 4.5 Further modeling with queuing systems 104

### Chapter 5. Multistep Serial Workflow Processes 106

- 5.1 Introduction 106
- 5.2 Modeling multistep processes in ithink 108
- 5.3 Specifying models/modeling objectives 109
- 5.4 An uncoupled process: An order handling process 110
- 5.5 A tightly coupled process: A fast food restaurant process 121
- 5.6 Other configurations 129
- 5.7 Material control systems 131

### Chapter 6. Multistep Parallel Workflow Processes 140

- 6.1 Introduction 140
- 6.2 Parallel queuing models: Designing a checkout system 141
- 6.3 Resource implications: The fast food restaurant revisited 144
- 6.4 Telephone call center model: Balking 149
- 6.5 Machine repair model 154
- 6.6 Batching: A laboratory analysis model 162

### Chapter 7. The Supplier Interface: Managing Risk 170

- 7.1 Introduction 170
- 7.2 First-moment managers 171
- 7.3 Second-moment managers 171
- 7.4 Third-moment managers 175
- 7.5 Fourth-moment managers 176

### Chapter 8. Customer Interface 179

- 8.1 Introduction 179
- 8.2 Controlling the inventory level: Make-to-Stock model 180
- 8.3 The Make-to-Order process: Customer interface 187

### Chapter 9. The Tradeoffs Among Quality, Speed, and Cost 192

- 9.1 Introduction 192
- 9.2 Model development 193
- 9.3 The tradeoffs 195
- 9.4 Coping with uncertainty 198
Chapter 10. Modeling Supply Chains 200

10.1 Introduction 200
10.2 Introduction to the Beer Game 203
10.3 The Beer Game model 205
10.4 Further analysis of the Beer Game model 218
10.5 Modifications to the basic model 222
10.6 Using the Beer Game model in game mode 223

Chapter 11. The Dynamics of Management Strategy: An Ecological Metaphor 226

11.1 Introduction 226
11.2 Hierarchy in nature 227
11.3 A model demonstrating the hierarchical nature of an expanding business 228
11.4 Equations for the complete model 236

Chapter 12. Modeling Improvement Processes 240

12.1 Introduction 240
12.2 Learning curves 241
12.3 Modeling an improvement process 247
12.4 Model results 251
12.5 Other types of learning curves 257

Appendix A. Modeling Random Variation in Business Systems 259

A.1 Introduction 259
A.2 The uniform distribution 262
A.3 The triangular distribution 263
A.4 The normal distribution: Common cause process variation 265
A.5 The exponential distribution: Equipment failure times 267
A.6 The Poisson distribution: Modeling defects in products 269
A.7 The pass/fail and binomial distribution: Product failures 271
A.8 Bimodal distributions: Parallel process flows 273
A.9 Custom distributions 274
A.10 The relative comparison of random variation 276

Appendix B. Economic Value Added 279

Appendix C. Derivation of Equations 6.2, 6.3, and 6.4 282
Appendix D. Optimization Techniques for the Customer Interface Model 284

D.1 Optimizing the model 284
D.2 Optimizing the physical model 284
D.3 Disappointment with the physical criterion for optimization 286
D.4 Finding the optimal financial controls 287

Appendix E. System Requirements for the CD-ROM 293
