

# Contents

<b>Chapter 1. Celestial and Mechanical Clocks</b>	<b>1</b>
1.1 Cyclic Events in Nature	1
1.2 The Calendar	2
1.3 Solar Eclipses as Time Markers	3
1.4 The Tides	5
1.5 The Sidereal Day	6
1.6 The Precession of the Equinoxes	8
1.7 The Sundial	8
1.8 The Astrolabe	10
1.9 Water Clocks	11
1.10 Tower Clocks	14
1.11 The Pendulum Clock	16
1.12 The Spring–Balance–Wheel Clock	18
<b>Chapter 2. Oscillations and Fourier Analysis</b>	<b>23</b>
2.1 Oscillatory Motion in Matter	23
2.2 Simple Harmonic Motion	24
2.3 Forced Oscillations: Resonance	26
2.4 Waves in Extended Media	28
2.5 Wave Dispersion	31
2.6 Linear and Nonlinear Media	32
2.7 Normal Modes of Vibration	33
2.8 Parametric Excitations	36
2.9 Fourier Analysis	37
2.10 Coupled Oscillations	41
<b>Chapter 3. Oscillators</b>	<b>45</b>
3.1 Feedback in Amplifiers	45
3.2 Conditions for Oscillation	48

viii Contents

3.3	Resonators .....	49
3.4	The Klystron Microwave Tube .....	52
3.5	Oscillators at Optical Frequency .....	53
3.6	Stability of Oscillators .....	56
<b>Chapter 4. Quartz Clocks</b>		<b>63</b>
4.1	Historical Antecedents .....	63
4.2	Properties and Structure of Crystalline Quartz .....	66
4.3	Modes of Vibration of a Quartz Plate .....	70
4.4	X-Ray Crystallography .....	72
4.5	Fabrication of Quartz Resonators .....	74
4.6	Stability of Resonance Frequency .....	74
4.7	The Quartz Resonator as a Circuit Element .....	78
4.8	Frequency/Time Measurement .....	80
<b>Chapter 5. The Language of Electrons, Atoms, and Quanta</b>		<b>87</b>
5.1	Classical Lorentz Theory .....	87
5.2	Spectrum of Blackbody Radiation .....	88
5.3	The Quantum of Radiation: The Photon .....	89
5.4	Bohr's Theory of the Hydrogen Atom .....	90
5.5	The Schrödinger Wave Equation .....	92
5.6	Quantum Numbers of Atomic States .....	94
5.7	The Vector Model .....	95
5.8	The Shell Structure of Electron States .....	96
5.9	The Pauli Exclusion Principle .....	99
5.10	Spectroscopic Notation .....	100
5.11	The Hyperfine Interaction .....	101
5.12	Electrons in Solids: The Band Theory .....	106
<b>Chapter 6. Magnetic Resonance</b>		<b>113</b>
6.1	Introduction .....	113
6.2	Atomic Magnetism .....	113
6.3	The Zeeman Effect .....	114
6.4	Gyroscopic Motion in a Magnetic Field .....	117
6.5	Inducing Transitions .....	119
6.6	Motion of Global Moment: The Bloch Theory .....	122
6.7	Production of Global Polarization .....	124
<b>Chapter 7. Corrections to Observed Atomic Resonance</b>		<b>133</b>
7.1	Resonance Frequency Broadening .....	134
7.2	Thermal Doppler Broadening .....	136
7.3	Relativistic Effects .....	142
7.4	Conclusion .....	148

<b>Chapter 8. The Rubidium Clock</b>	<b>149</b>
8.1 The Reference Hyperfine Transition . . . . .	149
8.2 The Breit–Rabi Formula . . . . .	150
8.3 Optical Pumping of Hyperfine Populations . . . . .	152
8.4 Optical Hyperfine Pumping: Use of an Isotopic Filter . . . . .	154
8.5 The Use of Buffer Gases . . . . .	157
8.6 Light Shifts in the Reference Frequency . . . . .	159
8.7 Rubidium Frequency Control of Quartz Oscillator . . . . .	160
8.8 Frequency Stability of the Rubidium Standard . . . . .	163
8.9 The Miniaturization of Atomic Clocks . . . . .	165
<b>Chapter 9. The Classical Cesium Standard</b>	<b>167</b>
9.1 Definition of the Unit of Time . . . . .	167
9.2 Implementation of the Definition: The Cesium Standard . . . . .	167
9.3 The Physical Design . . . . .	171
9.4 Detection of Transitions . . . . .	183
9.5 Frequency-Lock of Flywheel Oscillator to Cesium . . . . .	184
9.6 Corrections to the Observed Cs Frequency . . . . .	187
<b>Chapter 10. Atomic and Molecular Oscillators: Masers</b>	<b>191</b>
10.1 The Ammonia Maser . . . . .	191
10.2 Basic Elements of a Beam Maser . . . . .	192
10.3 Inversion Spectrum in NH <sub>3</sub> . . . . .	193
10.4 The Electrostatic State Selector . . . . .	196
10.5 Stimulated Radiation in the Cavity . . . . .	200
10.6 Threshold for Sustained Oscillation . . . . .	201
10.7 Sources of Frequency Instability . . . . .	202
10.8 The Rubidium Maser . . . . .	206
<b>Chapter 11. The Hydrogen Maser</b>	<b>209</b>
11.1 Introduction . . . . .	209
11.2 The Hyperfine Structure of H Ground State . . . . .	211
11.3 Principles of the Hydrogen Maser . . . . .	214
11.4 Physical Design of the H-Maser . . . . .	220
11.5 Automatic Cavity Tuning . . . . .	229
11.6 The Wall Shift in Frequency . . . . .	230
11.7 The H-Maser Signal Handling . . . . .	232
<b>Chapter 12. The Confinement of Particles in Fields</b>	<b>237</b>
12.1 Introduction . . . . .	237
12.2 The Penning Trap . . . . .	238
12.3 The Paul High-Frequency Trap . . . . .	243
12.4 Field Distortion due to Ions . . . . .	257

x	Contents	
12.5	The Effect of Collisions . . . . .	258
12.6	Ion Observation . . . . .	259
12.7	Laser Resonance Fluorescence Detection . . . . .	262
<b>Chapter 13. Isolated Ion Clock: A New Approach</b>		<b>263</b>
13.1	The Original Concept . . . . .	263
13.2	Hyperfine Resonance in Trapped $^{199}\text{Hg}^+$ Ions . . . . .	264
13.3	A Portable $\text{Hg}^{199}$ Ion Microwave Standard . . . . .	276
<b>Chapter 14. Optical Frequency Oscillators: Lasers</b>		<b>283</b>
14.1	Fundamentals . . . . .	283
14.2	Laser Beam Properties . . . . .	298
14.3	Laser Optical Elements . . . . .	302
<b>Chapter 15. Laser Systems</b>		<b>311</b>
15.1	The Gas Lasers . . . . .	311
15.2	Liquid Dye Lasers . . . . .	316
15.3	Semiconductor Lasers . . . . .	323
15.4	Solid Crystalline Lasers . . . . .	327
<b>Chapter 16. Laser Cooling of Atoms and Ions</b>		<b>337</b>
16.1	Introduction . . . . .	337
16.2	Light Pressure . . . . .	338
16.3	Scattering of Light from Small Particles . . . . .	340
16.4	Scattering of Light by Atoms . . . . .	341
16.5	Optical Field Gradient Force . . . . .	344
16.6	Doppler Cooling . . . . .	344
16.7	Theoretical Limit . . . . .	347
16.8	Optical “Molasses” and the Magneto-Optical Trap . . . . .	348
16.9	Polarization Gradient Cooling: The Sisyphus Effect . . . . .	352
16.10	Laser Cooling of Trapped Ions . . . . .	357
<b>Chapter 17. Application of Lasers to Microwave Standards</b>		<b>363</b>
17.1	Observation of Individual Ions . . . . .	363
17.2	Optical Detection of Hyperfine Transitions . . . . .	367
17.3	The NIST Mercury Ion Microwave Standard . . . . .	373
17.4	The Proposed Ytterbium Ion Standard . . . . .	376
17.5	The Laser Pumped Cesium Beam Standard . . . . .	377
17.6	The Cesium Fountain Standard . . . . .	381

<b>Chapter 18. Optical Standards and Measurement</b>	<b>387</b>
18.1 Introduction . . . . .	387
18.2 Definition of the Meter in Terms of the Second . . . . .	388
18.3 Secondary Optical Frequency Standards . . . . .	389
18.4 Optical Standards Based on Laser Cooled Ions . . . . .	396
18.5 Optical Frequency Chains . . . . .	405
18.6 Optical Frequency Comb Generators . . . . .	410
<b>Chapter 19. Applications: Time-Based Navigation</b>	<b>417</b>
19.1 Introduction . . . . .	417
19.2 “Deep” Space Probes . . . . .	417
19.3 Very Long Baseline Interferometry . . . . .	418
19.4 The Motion of the Earth . . . . .	419
19.5 Radio Navigation . . . . .	420
19.6 Navigation by Satellite . . . . .	426
19.7 The Global Positioning System (GPS) . . . . .	428
<b>Chapter 20. Atomic Clocks and Fundamental Physics</b>	<b>445</b>
20.1 Introduction . . . . .	445
20.2 Einstein’s Equivalence Principle (EEP) . . . . .	447
20.3 Lorentz Symmetry . . . . .	448
20.4 Symmetry in Fundamental Physics . . . . .	449
20.5 The CPT Symmetry . . . . .	452
20.6 The String Theory . . . . .	455
20.7 Experiments on ISS (International Space Station) . . . . .	456
20.8 Conclusion . . . . .	459
