## Contents

**Foreword** ............................................................. v  
*Teresa K. Woodruff and Karrie Ann Snyder*  

**Foreword** ............................................................. vii  
*Lindsay Beck and Joyce Reinecke*  

**Contributors** ......................................................... xvii  

**Part I Introduction**  

1. **The Emergence of a New Interdiscipline: Oncofertility** ............... 3  
*Teresa K. Woodruff*  

   Oncofertility: The New Offensive in the War on Cancer ................... 3  
   Secondary Effects of Treatment on the Health and Quality  
   of Life of Young Survivors of Cancer ................................. 4  
   Fertility Threats Due to Cancer Treatment ............................ 5  
   An Emerging Urgent Unmet Need for Young Cancer Patients:  
   Balancing Life-Preserving but Fertility-Threatening  
   Cancer Treatments .................................................. 6  
   *Information GAP* .................................................. 9  
   *Data GAP* .......................................................... 10  
   *Option GAP* ....................................................... 10  
   Conclusion .................................................................. 11  

**Part II Fertility Risk and Treatment Options**  

2. **Fertility Management for Women With Cancer** ......................... 15  
*Sanjay K. Agarwal and R. Jeffrey Chang*  

   Ovarian Physiology .................................................... 15  
   Impact of Cancer Therapies on Ovarian Function ..................... 18  
   Current Techniques of Fertility Preservation ......................... 20  
   *Embryo Freezing* .................................................... 20  
   *Ovarian Tissue Freezing* .......................................... 22
Contents

Common Cancers in Children and their Treatment ........................................ 58
Fertility Risks for Young Females ................................................................. 58
Gonadotoxicity of Cancer Treatments ............................................................ 58
Chemotherapy ................................................................................................. 59
Radiation ........................................................................................................ 59
Effects on the Hypothalamic-Pituitary-Ovarian Axis ..................................... 61
Pregnancy Outcomes in Cancer Survivors ....................................................... 63
Options for Preserving Fertility in Girls and Young Women ......................... 63
Fertility Risks for Young Men ......................................................................... 64
Chemotherapy ................................................................................................. 65
Radiotherapy .................................................................................................. 65
Options for Preserving Fertility in Boys and Young Men ................................. 66
Ethical Issues in Pediatric Patients .................................................................. 67
Conclusion ....................................................................................................... 67
References ........................................................................................................ 68

Part III Oncofertility Techniques and Research

6. Bioengineering and the Ovarian Follicle ........................................................ 75
   Min Xu, Teresa K. Woodruff, and Lonnie D. Shea
   Follicle Growth In Vivo .................................................................................. 76
   Culture Systems for Follicle Growth ............................................................... 77
   Hydrogels for Three-Dimensional Culture In Vitro ...................................... 78
   Ovarian Transplantation Using Biomaterials ................................................ 79
   Conclusion ..................................................................................................... 80
   References ..................................................................................................... 80

7. The Science of Cryobiology .......................................................................... 83
   Steven F. Mullen and John K. Critser
   Introduction .................................................................................................... 83
   Anatomy of Cryopreservation ....................................................................... 83
   The Effects of Water Precipitation (as Ice) During Cooling ......................... 84
   Ice Nucleation, Crystallization, Vitrification, and Devitrification ................ 84
   Solute Concentration as a Result of Ice Crystallization, The
   Associated Osmotic Effects, and Cell Death at Supra-Optimal
   Cooling Rates ................................................................................................ 86
   Cell Death at Sub-Optimal Cooling Rates and the
   Role of Cryoprotectants in Mitigating Cell Damage ...................................... 90
   Cryoprotectants: Beneficial Effects .............................................................. 91
   Cryoprotectants: Detrimental Effects ........................................................... 94
   Cell Death at Sub-Optimal Cooling Rates .................................................... 98
   Cooling and Cooling Injury/Cold Shock ....................................................... 99
   Vitrification as an Alternate to Equilibrium cryopreservation ....................... 102
   References ..................................................................................................... 103
8. Ovarian Tissue Cryopreservation and Transplantation: Banking Reproductive Potential for the Future .......................... 110
   David Lee
   Indications for Ovarian Tissue Banking .................................. 110
   Scope of the Clinical Problem and Incidence of Ovarian Failure .... 110
   Gonadotoxicity of Chemotherapy ........................................... 111
   Gonadotoxicity of Radiation Therapy ..................................... 112
   Limitations of Fertility: Preserving Techniques .......................... 113
   The Promise of Ovarian Tissue Banking ................................... 115
   Cryopreservation of Ovarian Tissue has been Successful .............. 116
   Autotransplantation of Ovarian Tissue has been Successful ........... 117
   Problems with Ovarian Transplantation: Re-Introduction of Cancer ... 123
   Xenografting as a Potential Solution ..................................... 124
   Conclusion ................................................................. 126
   References ............................................................... 126

9. Progress, History and Promise of Ovarian Cryopreservation and Transplantation for Pediatric Cancer Patients ................... 130
   Yasmin Gosiengfiao
   References ............................................................... 132

Part IV Health Care Decision-Making

10. Oncofertility and the Social Sciences ................................. 137
    Karrie Ann Snyder
    Studying Cancer Within the Social Sciences ............................ 138
    Gender and Oncofertility .................................................. 139
    Gender and Patient-Physician Interactions ............................ 140
    Gender and the Experience of Infertility .............................. 141
    Race/Ethnicity and Oncofertility ........................................ 142
    Race/Ethnicity and Patient–Physician Interactions .................... 143
    Race/Ethnicity and Family and Community Involvement ............... 144
    The Digital Divide and Race/Ethnicity .................................. 145
    Conclusion ................................................................. 146
    References ............................................................... 147

    Marla L. Clayman, Kathleen M. Galvin, and Paul Arntson
    The Current State of Pediatric Oncofertility ............................ 150
    Family Communication in Context ...................................... 151
    Shared Decision Making in Theory and in Practice ................. 152
Part V Ethical and Psychosocial Impact of Cancer-Related Infertility

12. Today's Research, Tomorrows Cures: The Ethical Implications of Oncofertility 163
   
   Leilah E. Backhus and Laurie Zoloth

   Expanding Options for Women – Follicle Preservation and Maturation 165

   A Prairie Horizon: The Long View of Research on Fertility 165

   The Role of Oncologists and Infertility Specialists 168

   Ethical Issues in the Case of Childhood Cancers 170

   The Special Case of Young Girls 170

   Research in Children 171

   Assessing the Intervention: A Community Consent Process in Action 173

   The Ethical Implications for a New Terrain: Therapy or Enhancement? 174

   Recalling a Complex History 176

   Conclusion 178

   References 178

13. The Psychosocial Context of Cancer-Related Infertility 180

   Matthew J. Loscalzo and Karen L. Clark

   The Social Context 180

   Psychosocial Screening for Infertility Concerns 183

   Biopsychosocial Screening Instrument: How Can We Help You and Your Family? 183

   Discussion and Implications 188

   References 190

14. Childhood Cancer: Fertility and Psychosocial Implications 191

   Karen E. Kinahan, Aarati Didwania, and Carrie L. Nieman

   Recent Research on Late Effects and Infertility 191

   Addressing the Threat of Infertility 193

   Childhood Cancer Survivors and Fertility Preservation 194

   Male Infertility 196

   Access to Care 197

   Conclusion 198

   References 198
15. Fertility Preservation and Adolescent Cancer Patients: Lessons from Adult Survivors of Childhood Cancer and Their Parents .................................................. 201

Methods ............................................. 203
Study Design and Sample Recruitment ............................................ 203
Data Collection and Analysis .................................................. 203
Results .................................................. 204
Sample Characteristics .................................................. 204
Content Analysis ........................................ 204
Discussion ............................................. 211
Conclusion ............................................. 215
References ............................................. 216

Part VI Training in a New Medical Discipline and Medical Guidelines

16. Oncofertility: A New Medical Discipline and the Emerging Scholar ............................................. 221
  Laxmi A. Kondapalli

Infertility: An Unmet Clinical Need for Young Cancer Patients ........ 222
Oncofertility and the Oncofertility Scholar ...................................... 226
Reproductive Endocrinology and Infertility as the Springboard to a New Oncofertility Scholar ............................................. 226
Research Directions ........................................ 229
Future Directions ........................................ 230
Conclusion ............................................. 231
References ............................................. 233

17. Oncofertility Consortium Consensus Statement: Guidelines for Ovarian Tissue Cryopreservation ............................................. 235
  Leilah E. Backhus, Laxmi A. Kondapalli, R. Jeffrey Chang, Christos Coutifaris, Ralph Kazer, and Teresa K. Woodruff

References ............................................. 239

Part VII Patient Stories and Oncofertility

18. Personal Accounts of Cancer and Infertility ......................... 243
  Provided by Fertile Hope

A New Generation of Hope: Antoinette’s Story ......................... 243
Starting a Family One Day: Adriane’s Story .............................. 244
Oncofertility
Fertility Preservation for Cancer Survivors
Woodruff, T.; Snyder, K.A. (Eds.)
2007, XVIII, 263 p., Hardcover
ISBN: 978-0-387-72292-4
