Preface .................................................................................................................. v

Part I Overview of Quantitative Finance and Risk Management Research

1 Theoretical Framework of Finance .................................................................. 3
   1.1 Introduction .......................................................................................... 3
   1.2 Discounted Cash-Flow Valuation Theory ........................................... 3
   1.3 M and M Valuation Theory ................................................................. 6
   1.4 Markowitz Portfolio Theory ............................................................... 10
   1.5 Capital Asset Pricing Model .............................................................. 10
   1.6 Arbitrage Pricing Theory .................................................................. 12
   1.7 Option Valuation .............................................................................. 14
   1.8 Futures Valuation and Hedging ......................................................... 15
   1.9 Conclusion ....................................................................................... 22
References .......................................................................................................... 22

2 Investment, Dividend, Financing, and Production Policies: Theory and Implications ...................................................... 23
   2.1 Introduction ........................................................................................ 23
   2.2 Investment and Dividend Interactions: The Internal Versus External Financing Decision ............................................... 23
   2.3 Interactions Between Dividend and Financing Policies .................... 25
   2.4 Interactions Between Financing and Investment Decisions ............. 28
   2.5 Implications of Financing and Investment Interactions for Capital Budgeting ...................................................... 30
   2.6 Implications of Different Policies on the Beta Coefficient ............... 34
   2.7 Conclusion ....................................................................................... 36
References .......................................................................................................... 36

Appendix 2A Stochastic Dominance and its Applications to Capital-Structure Analysis with Default Risk .............................................................................. 38
   2A.1 Introduction .................................................................................... 38
   2A.2 Concepts and Theorems of Stochastic Dominance ....................... 38
   2A.3 Stochastic-Dominance Approach to Investigating the Capital-Structure Problem with Default Risk ......................... 39
   2A.4 Summary ...................................................................................... 40

### Contents

- **Appendix 7A** A Linear-Programming Approach to Portfolio-Analysis Models ............................................. 122
- **Appendix 7B** Expected Return, Variance, and Covariance for a Multi-index Model ..................................... 123

#### 8 Performance-Measure Approaches for Selecting Optimum Portfolios ......................................................... 125
Cheng-Few Lee, Hong-Yi Chen, and Jessica Shin-Ying Mai

8.1 Introduction ................................................................................................................................. 125
8.2 Sharpe Performance-Measure Approach with Short Sales Allowed .............................................. 125
8.3 Treynor-Measure Approach with Short Sales Allowed .................................................................... 128
8.4 Treynor-Measure Approach with Short Sales Not Allowed ............................................................. 130
8.5 Impact of Short Sales on Optimal-Weight Determination ................................................................ 132
8.6 Economic Rationale of the Treynor Performance-Measure Method ................................................ 132
8.7 Conclusion .................................................................................................................................. 133

References ............................................................................................................................................. 133
Appendix 8A Derivation of Equation (8.6) .......................................................................................... 133
Appendix 8B Derivation of Equation (8.10) ......................................................................................... 134
Appendix 8C Derivation of Equation (8.15) ......................................................................................... 135

#### 9 The Creation and Control of Speculative Bubbles in a Laboratory Setting ................................................... 137
James S. Ang, Dean Diavatopoulos, and Thomas V. Schwarz

9.1 Introduction ..................................................................................................................................... 137
9.2 Bubbles in the Asset Markets ....................................................................................................... 139
9.3 Experimental Design ..................................................................................................................... 140
9.4 Results and Analysis ...................................................................................................................... 145
9.5 Conclusions ................................................................................................................................... 161

References ............................................................................................................................................. 163

#### 10 Portfolio Optimization Models and Mean–Variance Spanning Tests .......................................................... 165
Wei-Peng Chen, Huimin Chung, Keng-Yu Ho, and Tsui-Ling Hsu

10.1 Introduction of Markowitz Portfolio-Selection Model ....................................................................... 165
10.2 Measurement of Return and Risk .................................................................................................. 166
10.3 Efficient Portfolio .......................................................................................................................... 166
10.4 Mean–Variance Spanning Test ....................................................................................................... 172
10.5 Alternative Computer Program to Calculate Efficient Frontier ...................................................... 175
10.6 Conclusion .................................................................................................................................... 182

References ............................................................................................................................................. 184

#### 11 Combining Fundamental Measures for Stock Selection .............................................................................. 185
Kenton K. Yee

11.1 Introduction ................................................................................................................................... 185
11.2 Bayesian Triangulation .................................................................................................................. 187
11.3 Triangulation in Forensic Valuation ............................................................................................... 189
11.4 Bayesian Triangulation in Asset Pricing Settings ............................................................................ 190
11.5 The Data Snooping Trap ............................................................................................................... 194
11.6 Using Guidance from Theory to Mitigate Data Snooping ............................................................... 195
11.7 Avoiding Data-Snooping Pitfalls in Financial Statement Analysis ................................................ 197
11.8 Conclusion ................................................................................................................................... 199

References ............................................................................................................................................. 200
Appendix 11A Proof of Theorem 11.1 ..................................................................................................... 201

11A.1 Generalization of Theorem 11.1 ................................................................................................... 201
16.9 Portfolio Analysis of a Two-Asset Portfolio ........................................... 262
16.10 Mathematical Portfolio Analysis .......................................................... 265
16.11 Calculus Minimization of Risk: A Three-Security Portfolio .................... 265
16.12 Conclusion .............................................................................................. 266
References ........................................................................................................ 266

17 Portfolio Theory, CAPM and Performance Measures ............................... 267
Luis Ferruz, Fernando Gómez-Bezares, and María Vargas
17.1 Portfolio Theory and CAPM: Foundations and Current Application ......... 267
17.2 Performance Measures Related to Portfolio Theory and the CAPM: Classic
Indices, Derivative Indices, and New Approaches ........................................ 274
17.3 Empirical Analysis: Performance Rankings and Performance Persistence .... 277
17.4 Summary and Conclusions ...................................................................... 280
References ........................................................................................................ 280

18 Intertemporal Equilibrium Models, Portfolio Theory and the Capital Asset
Pricing Model .................................................................................................. 283
Stephen J. Brown
18.1 Introduction ................................................................................................ 283
18.2 Intertemporal Equilibrium Models ............................................................ 283
18.3 Relationship to Observed Security Returns ............................................. 284
18.4 Intertemporal Equilibrium and the Capital Asset Pricing Model ............... 285
18.5 Hansen Jagannathan Bounds .................................................................... 285
18.6 Are Stochastic Discount Factors Positive? .............................................. 286
18.7 Conclusion .............................................................................................. 286
References ........................................................................................................ 287

19 Persistence, Predictability, and Portfolio Planning ...................................... 289
Michael J. Brennan and Yihong Xia
19.1 Introduction ................................................................................................ 289
19.2 Detecting and Exploiting Predictability .................................................... 290
19.3 Stock Price Variation and Variation in the Expected Returns .................... 296
19.4 Economic Significance of Predictability .................................................. 298
19.5 Forecasts of Equity Returns ..................................................................... 303
19.6 Conclusion .............................................................................................. 314
References ........................................................................................................ 314
Appendix 19A The Optimal Strategy .............................................................. 315
Appendix 19B The Unconditional Strategy ..................................................... 316
Appendix 19C The Myopic Strategy ............................................................... 317
Appendix 19D The Optimal Buy-and-Hold Strategy ...................................... 317

Lan-chih Ho, John Cadle, and Michael Theobald
20.1 Introduction ................................................................................................ 319
20.2 Theory of Alternative Portfolio Insurance Strategies ............................ 319
20.3 Empirical Comparison of Alternative Portfolio Insurance Strategies .......... 324
20.4 Recent Market Developments ................................................................... 329
20.5 Implications for Financial Market Stability ............................................. 331
20.6 Conclusion .............................................................................................. 332
References ........................................................................................................ 332
## Security Market Microstructure: The Analysis of a Non-Frictionless Market
