Preface ................................................................. vii
Acknowledgements .................................................. xi

1 Introduction .......................................................... 1
  1.1 Prognosis and Prediction in Medicine ......................... 1
    1.1.1 Prediction Models and Decision-Making ............... 1
  1.2 Statistical Modelling for Prediction .......................... 2
    1.2.1 Model Uncertainty .................................. 3
    1.2.2 Sample Size ....................................... 4
  1.3 Structure of the Book ....................................... 5
    1.3.1 Part I: Prediction Models in Medicine ............... 5
    1.3.2 Part II: Developing Valid Prediction Models .......... 6
    1.3.3 Part III: Generalizability of Prediction Models .... 6
    1.3.4 Part IV: Applications ............................... 7
    1.3.5 Questions and Exercises ............................. 7

Part I Prediction Models in Medicine

2 Applications of Prediction Models ............................. 9
  2.1 Applications: Medical Practice and Research .............. 11
  2.2 Prediction Models for Public Health ....................... 12
    2.2.1 Targeting of Preventive Interventions ............... 12
    2.2.2 Example: Incidence of Breast Cancer ............... 12
  2.3 Prediction Models for Clinical Practice .................... 13
    2.3.1 Decision Support on Test Ordering ................... 13
    2.3.2 Example: Predicting Renal Artery Stenosis .......... 14
    2.3.3 Starting Treatment: the Treatment Threshold ........ 15
    2.3.4 Example: Probability of Deep Venous Thrombosis .... 16
    2.3.5 Intensity of Treatment ............................. 16
    2.3.6 Example: Defining a Poor Prognosis Subgroup in Cancer .......... 18
2.3.7 Cost-Effectiveness of Treatment .............................. 18
2.3.8 Delaying Treatment ........................................ 19
2.3.9 Example: Spontaneous Pregnancy Chances ........... 19
2.3.10 Surgical Decision-Making ................................. 21
2.3.11 Example: Replacement of Risky Heart Valves ....... 21

2.4 Prediction Models for Medical Research ................. 23
2.4.1 Inclusion and Stratification in an RCT .................. 23
2.4.2 Example: Selection for TBI Trials ...................... 24
2.4.3 Covariate Adjustment in an RCT ......................... 25
2.4.4 Gain in Power by Covariate Adjustment ............... 26
2.4.5 Example: Analysis of the GUSTO-III Trial .......... 27
2.4.6 Prediction Models and Observational Studies ......... 27
2.4.7 Propensity Scores ......................................... 28
2.4.8 Example: Statin Treatment Effects ..................... 28
2.4.9 Provider Profiling ......................................... 29
2.4.10 Example: Ranking Cardiac Outcome ................. 29

2.5 Concluding Remarks .......................................... 30

3 Study Design for Prediction Models ........................ 33
3.1 Study Design ..................................................... 33
3.2 Cohort Studies for Prognosis ............................... 33
3.2.1 Retrospective Designs .................................... 35
3.2.2 Example: Predicting Early Mortality in Oesophageal Cancer .............................................. 35
3.2.3 Prospective Designs ........................................ 35
3.2.4 Example: Predicting Long-Term Mortality in Oesophageal Cancer ............................................ 36
3.2.5 Registry Data ............................................... 36
3.2.6 Example: Surgical Mortality in Oesophageal Cancer ......................................................... 37
3.2.7 Nested Case–Control Studies ......................... 37
3.2.8 Example: Perioperative Mortality in Major Vascular Surgery ................................................. 38
3.3 Studies for Diagnosis ............................................ 38
3.3.1 Cross-Sectional Study Design and Multivariable Modelling .................................................. 38
3.3.2 Example: Diagnosing Renal Artery Stenosis ......... 38
3.3.3 Case–Control Studies ...................................... 39
3.3.4 Example: Diagnosing Acute Appendicitis .......... 39
3.4 Predictors and Outcome ....................................... 39
3.4.1 Strength of Predictors ..................................... 39
3.4.2 Categories of Predictors .................................. 40
3.4.3 Costs of Predictors ........................................ 40
3.4.4 Determinants of Prognosis .............................. 41
3.4.5 Prognosis in Oncology ................................... 41
3.5 Reliability of Predictors ........................................... 42
  3.5.1 Observer Variability ........................................ 42
  3.5.2 Example: Histology in Barrett’s Oesophagus .......... 42
  3.5.3 Biological Variability ..................................... 43
  3.5.4 Regression Dilution Bias ................................. 43
  3.5.5 Example: Simulation Study on Reliability of a 
    Binary Predictor ............................................. 43
  3.5.6 Choice of Predictors ..................................... 44
3.6 Outcome .............................................................. 44
  3.6.1 Types of Outcome .......................................... 44
  3.6.2 Survival Endpoints ....................................... 45
  3.6.3 Example: Relative Survival in Cancer Registries ..... 45
  3.6.4 Composite End Points ................................... 46
  3.6.5 Example: Mortality and Composite End Points 
    in Cardiology ................................................ 46
  3.6.6 Choice of Prognostic Outcome ........................... 46
  3.6.7 Diagnostic End Points ................................... 47
  3.6.8 Example: PET Scans in Oesophageal Cancer .......... 47
3.7 Phases of Biomarker Development ............................... 47
3.8 Statistical Power ................................................... 48
  3.8.1 Statistical Power to Identify Predictor Effects ....... 49
  3.8.2 Examples of Statistical Power Calculations .......... 49
  3.8.3 Statistical Power for Reliable Predictions ........... 50
3.9 Concluding Remarks ............................................... 51

4 Statistical Models for Prediction ................................. 53
  4.1 Continuous Outcomes ......................................... 53
    4.1.1 Examples of Linear Regression ......................... 54
    4.1.2 Economic Outcomes ..................................... 54
    4.1.3 Example: Prediction of Costs ........................ 54
    4.1.4 Transforming the Outcome .............................. 54
    4.1.5 Performance: Explained Variation ........................
    4.1.6 More Flexible Approaches ............................... 55
  4.2 Binary Outcomes .................................................. 57
    4.2.1 \( R^2 \) in Logistic Regression Analysis .................. 58
    4.2.2 Calculation of \( R^2 \) on the Log Likelihood Scale ... 58
    4.2.3 Models Related to Logistic Regression ................. 60
    4.2.4 Bayes Rule .............................................. 61
    4.2.5 Example: Calculations with Likelihood Ratios ......... 62
    4.2.6 Prediction with Naïve Bayes ............................ 63
    4.2.7 Examples of Naïve Bayes ............................... 65
    4.2.8 Calibration and Naïve Bayes ............................ 65
    4.2.9 Logistic Regression and Bayes .......................... 65
    4.2.10 More Flexible Approaches to Binary Outcomes ....... 65
4.2.11 Classification and Regression Trees .................................... 67
4.2.12 Example: Mortality in Acute MI Patients ............................ 67
4.2.13 Advantages and Disadvantages of Tree Models ..................... 67
4.2.14 Trees as Special Cases of Logistic Regression Modelling .......... 69
4.2.14 Other Methods for Binary Outcomes ................................. 70
4.2.15 Summary on Binary Outcomes ........................................... 71
4.3 Categorical Outcomes ......................................................... 71
4.3.1 Polytomous Logistic Regression ........................................ 72
4.3.2 Example: Histology of Residual Masses ............................... 72
4.3.3 Alternative Models ....................................................... 73
4.3.4 Comparison of Modelling Approaches ................................ 74
4.4 Ordinal Outcomes ............................................................. 74
4.4.1 Proportional Odds Logistic Regression .................................. 75
4.4.2 Alternative: Continuation Ratio Model ................................ 77
4.5 Survival Outcomes ............................................................. 77
4.5.1 Cox Proportional Hazards Regression ................................. 77
4.5.2 Predicting with Cox .......................................................... 78
4.5.3 Proportionality Assumption ............................................. 78
4.5.4 Kaplan–Meier Analysis ...................................................... 79
4.5.5 Example: NFI After Treatment of Leprosy .............................. 79
4.5.6 Parametric Survival ......................................................... 80
4.5.7 Example: Replacement of Risky Heart Valves ......................... 80
4.5.8 Summary on Survival Outcomes ........................................ 81
4.6 Concluding Remarks ......................................................... 81

5 Overfitting and Optimism in Prediction Models .............................. 83
5.1 Overfitting and Optimism .................................................... 83
5.1.1 Example: Surgical Mortality in Oesophagectomy .................... 84
5.1.2 Variability within One Centre ........................................... 84
5.1.3 Variability between Centres: Noise vs. True Heterogeneity ........ 85
5.1.4 Predicting Mortality by Centre: Shrinkage ............................ 87
5.2 Overfitting in Regression Models .......................................... 87
5.2.1 Model Uncertainty: Testimation ......................................... 87
5.2.2 Other Biases ................................................................... 89
5.2.3 Overfitting by Parameter Uncertainty ................................. 90
5.2.4 Optimism in Model Performance ....................................... 90
5.2.5 Optimism-Corrected Performance ..................................... 92
5.3 Bootstrap Resampling .......................................................... 92
5.3.1 Applications of the Bootstrap ........................................... 93
5.3.2 Bootstrapping for Regression Coefficients .......................... 93
5.3.3 Bootstrapping for Optimism Correction ............................... 94
5.3.4 Calculation of Optimism-Corrected Performance ................... 95
8 Case Study on Dealing with Missing Values

8.1 Introduction

8.1.1 Aim

8.1.2 Patient Selection

8.1.3 Selection of Potential Predictors

8.1.4 Coding and Time Dependency of Predictors

8.2 Missing Values in the IMPACT Study

8.2.1 Missing Values in Outcome

8.2.2 Quantification of Missingness of Predictors

8.2.3 Patterns of Missingness

8.3 Imputation of Missing Predictor Values

8.3.1 Correlations Between Predictors

8.3.2 Imputation Model

8.3.3 Distributions of Imputed Values

8.4 Estimating Adjusted Effects

8.4.1 Adjusted Analysis for Complete Predictors: Age and Motor Score

8.4.2 Adjusted Analysis for Incomplete Predictors: Pupils

8.5 Multivariable Analyses

8.6 Concluding Remarks

9 Coding of Categorical and Continuous Predictors

9.1 Categorical Predictors

9.1.1 Examples of Categorical Coding

9.2 Continuous Predictors

9.2.1 Examples of Continuous Predictors

9.2.2 Categorization of Continuous Predictors

9.3 Non-Linear Functions for Continuous Predictors

9.3.1 Polynomials

9.3.2 Fractional Polynomials

9.3.3 Splines

9.3.4 Example: Functional Forms with RCS or FP

9.3.5 Extrapolation and Robustness
9.4 Outliers and Truncation ................................................. 167
  9.4.1 Example: Glucose Values and Outcome of TBI ............... 168
9.5 Interpretation of Effects of Continuous Predictors ................. 170
  9.5.1 Example: Predictor Effects in TBI ............................. 171
9.6 Concluding Remarks .................................................. 172
  9.6.1 Software ......................................................... 172

10 Restrictions on Candidate Predictors ................................ 175
  10.1 Selection Before Studying the Predictor–Outcome
      Relationship .......................................................... 175
    10.1.1 Selection Based on Subject Knowledge ....................... 175
    10.1.2 Example: Too Many Candidate Predictors .................. 176
    10.1.3 Meta-Analysis for Candidate Predictors .................... 176
    10.1.4 Example: Predictors in Testicular Cancer .................. 176
    10.1.5 Selection Based on Distributions ............................ 177
  10.2 Combining Similar Variables ...................................... 177
    10.2.1 Example: Coding of Comorbidity ............................ 178
    10.2.2 Assessing the Equal Weights Assumption ................... 178
    10.2.3 Logical Weighting ............................................. 179
    10.2.4 Statistical Combination ..................................... 180
  10.3 Averaging Effects .................................................. 180
    10.3.1 Example: Chlamydia Trachomatis Infection Risks .......... 180
    10.3.2 Example: Acute Surgery Risk Relevant for
      Elective Patients? ................................................... 180
  10.4 Case study: Family History for Prediction of a
      Genetic Mutation .................................................... 181
    10.4.1 Clinical Background and Patient Data ....................... 181
    10.4.2 Similarity of Effects ........................................ 182
    10.4.3 CRC and Adenoma in a Proband ............................. 184
    10.4.4 Age of CRC in Family History ............................... 185
    10.4.5 Full Prediction Model for Mutations ....................... 186
  10.5 Concluding Remarks ................................................ 187

11 Selection of Main Effects ............................................. 191
  11.1 Predictor Selection ................................................ 191
    11.1.1 Reduction Before Modelling .................................. 191
    11.1.2 Reduction While Modelling ................................... 192
    11.1.3 Collinearity ................................................... 192
    11.1.4 Parsimony ..................................................... 193
    11.1.5 Should Non-Significant Variables Be Removed? ............. 193
    11.1.6 Summary Points ............................................... 194
  11.2 Stepwise Selection ................................................ 194
    11.2.1 Stepwise Selection Variants ................................ 194
    11.2.2 Stopping Rules in Stepwise Selection ....................... 195
11.3 Advantages of Stepwise Methods ......................... 196
11.4 Disadvantages of Stepwise Methods ...................... 197
11.4.1 Instability of selection ................................ 197
11.4.2 Biased Estimation of Coefficients .................... 199
11.4.3 Bias of Stepwise Selection and Events Per Variable . 199
11.4.4 Misspecification of Variability ....................... 201
11.4.5 Exaggeration of P-Values ............................. 204
11.4.6 Predictions of Worse Quality Than from a Full Model . 204
11.5 Influence of Noise Variables .............................. 205
11.6 Univariate Analyses and Model Specification ............. 206
11.6.1 Pros and Cons of Univariate Pre-Selection ............ 207
11.6.2 Testing of Predictors within Domains ................ 207
11.7 Modern Selection Methods ............................... 207
11.7.1 Bootstrapping for Selection .......................... 208
11.7.2 Bagging and Boosting ................................ 208
11.7.3 Bayesian Model Averaging (BMA) ..................... 208
11.7.4 Practical Advantages of BMA ......................... 209
11.7.5 Shrinkage of Regression Coefficients to Zero ........ 210
11.8 Concluding Remarks .................................... 210

12 Assumptions in Regression Models: Additivity and Linearity . 213
12.1 Additivity and Interaction Terms .......................... 213
12.1.1 Potential Interaction Terms to Consider .............. 214
12.1.2 Interactions with Treatment .......................... 214
12.1.3 Other Potential Interactions ......................... 215
12.1.4 Example: Time and Survival After Valve Replacement ................ 216
12.2 Selection, Estimation and Performance with Interaction Terms ... 216
12.2.1 Example: Age Interactions in GUSTO-I .............. 217
12.2.2 Estimation of Interaction Terms ....................... 217
12.2.3 Better Prediction with Interaction Terms? ............ 219
12.2.4 Summary Points ...................................... 220
12.3 Non-linearity in Multivariable Analysis .................. 220
12.3.1 Multivariable Restricted Cubic Splines (RCS) ....... 220
12.3.2 Multivariable Fractional Polynomials (FP) ........... 221
12.3.3 Multivariable Splines in GAM ....................... 222
12.4 Example: Non-Linearity in Testicular Cancer Case Study .... 222
12.4.1 Details of Multivariable FP and GAM Analyses ...... 224
12.4.2 GAM in Univariate and Multivariable Analysis ....... 224
12.4.3 Predictive Performance ............................... 226
12.4.4 R code for Non-Linear Modelling .................... 227
12.5 Concluding Remarks .................................... 227
12.5.1 Recommendations ................................. 228
13 Modern Estimation Methods

13.1 Predictions from Regression and Other Models
13.2 Shrinkage
  13.2.1 Uniform Shrinkage
  13.2.2 Uniform Shrinkage in GUSTO-I
13.3 Penalized Estimation
  13.3.1 Penalized Maximum Likelihood Estimation
  13.3.2 Penalized ML in Sample4
  13.3.3 Shrinkage, Penalization, and Model Selection
13.4 Lasso
  13.4.1 Estimation of Lasso Model
  13.4.2 Lasso in GUSTO-I
  13.4.3 Predictions after Shrinkage
  13.4.4 Model Performance after Shrinkage
13.5 Concluding Remarks

14 Estimation with External Information

14.1 Combining Literature and Individual Patient Data
  14.1.1 Adaptation Method 1
  14.1.2 Adaptation Method 2
  14.1.3 Estimation
  14.1.4 Simulation Results
  14.1.5 Performance of Adapted Model
  14.1.6 Improving Calibration
14.2 Example: Mortality of Aneurysm Surgery
  14.2.1 Meta-Analysis
  14.2.2 Individual Patient Data Analysis
  14.2.3 Adaptation Results
14.3 Alternative Approaches
  14.3.1 Overall Calibration
  14.3.2 Bayesian Methods: Using Data Priors to Regression Modelling
  14.3.3 Example: Predicting Neonatal Death
  14.3.4 Example: Mortality of Aneurysm Surgery
14.4 Concluding Remarks

15 Evaluation of Performance

15.1 Overall Performance Measures
  15.1.1 Explained Variation: R^2
  15.1.2 Brier Score
  15.1.3 Example: Performance of Testicular Cancer Prediction Model
  15.1.4 Overall Performance Measures in Survival

19.6.1 Calculation of Reference Values ................... 349
19.6.2 R Code ........................................ 350
19.6.3 Performance with Refitting ....................... 350
19.6.4 Examples: Testicular Cancer and TBI .................. 351
19.7 Estimation of Performance ................................................. 352
  19.7.1 Uncertainty in Validation of Performance .................... 352
  19.7.2 Estimating Standard Errors in Validation Studies ............ 354
  19.7.3 Summary Points .................................................. 354
19.8 Design of External Validation Studies ............................... 355
  19.8.1 Power of External Validation Studies .......................... 355
  19.8.2 Required Sample Sizes for Validation Studies ................. 356
  19.8.3 Summary Points .................................................. 357
19.9 Concluding Remarks..................................................... 358

20 Updating for a New Setting .............................................. 361
  20.1 Updating the Intercept ............................................... 361
    20.1.1 Simple Updating Methods ..................................... 362
    20.1.2 Bayesian Updating ............................................. 362
  20.2 Approaches to More-Extensive Updating ............................ 363
    20.2.1 A comparison of Eight Updating Methods ..................... 364
  20.3 Case Study: Validation and Updating in GUSTO-I ................ 366
    20.3.1 Validity of TIMI-II Model for GUSTO-I ....................... 366
    20.3.2 Updating the TIMI-II Model for GUSTO-I ..................... 368
    20.3.3 Performance of Updated Models ................................ 369
    20.3.4 R Code for Updating Methods .................................. 370
  20.4 Shrinkage and Updating .............................................. 371
    20.4.1 Example: Shrinkage towards Re-calibrated Values in
         GUSTO-I ............................................................ 371
    20.4.2 R code for Shrinkage and Penalization in Updating ........ 372
  20.5 Sample Size and Updating Strategy ................................ 373
    20.5.1 Simulations of Sample Size, Shrinkage, and Updating
         Strategy ............................................................ 374
  20.6 Validation and Updating of Tree Models ........................... 376
    20.6.1 Example: Tree Modelling in Testicular Cancer ................ 377
  20.7 Validation and Updating of Survival Models ....................... 378
    20.7.1 Case Study: Validation of a Simple Index for
         Non-Hodgkin’s Lymphoma ........................................ 379
    20.7.2 Updating the Prognostic Index .................................. 380
    20.7.3 Re-calibration for Groups by Time Points ..................... 380
    20.7.4 Re-calibration with a Cox Regression Model .................. 381
    20.7.5 Parametric Re-calibration ..................................... 382
    20.7.6 Summary Points .................................................. 384
  20.8 Continuous Updating .................................................. 384
    20.8.1 A Continuous Updating Strategy ............................... 385
    20.8.2 Example: Continuous Updating in GUSTO-I ................... 386
  20.9 Concluding Remarks..................................................... 388
21 Updating for Multiple Settings

21.1 Differences Between Settings

21.1.1 Testing for Calibration-in-the Large

21.1.2 Illustration of Heterogeneity in GUSTO-I

21.1.3 Updating for Better Calibration-in-the Large

21.1.4 Empirical Bayes Estimates

21.1.5 Illustration of Updating in GUSTO-I

21.1.6 Testing and Updating of Predictor Effects

21.1.7 Heterogeneity of Predictor Effects in GUSTO-I

21.1.8 R Code for Random Effect Analyses

21.2 Provider Profiling

21.2.1 Indicators for Differences Between Centres

21.2.2 Ranking of Centres

21.2.3 Example: Provider Profiling in Stroke

21.2.4 Testing of Differences Between Centres

21.2.5 Estimation of Differences Between Centres

21.2.6 Uncertainty in Differences

21.2.7 Ranking of Centres

21.2.8 Essential R Code for Provider Profiling

21.2.9 Guidelines for Provider Profiling

21.3 Concluding Remarks

21.3.1 Bibliographic Notes

Part IV Applications

22 Prediction of a Binary Outcome: 30-Day Mortality After Acute Myocardial Infarction

22.1 GUSTO-I Study

22.1.1 Acute Myocardial Infarction

22.1.2 Treatment Results from GUSTO-I

22.1.3 Prognostic Modelling in GUSTO-I

22.2 General Considerations of Model Development

22.2.1 Research Question and Intended Application

22.2.2 Outcome and Predictors

22.2.3 Study Design and Analysis

22.3 Seven Modelling Steps in GUSTO-I

22.3.1 Data Inspection

22.3.2 Coding of Predictors

22.3.3 Model Specification

22.3.4 Model Estimation

22.3.5 Model Performance

22.3.6 Model Validation

22.3.7 Presentation
### 22.4 Validity
- 22.4.1 Internal Validity: Overfitting
- 22.4.2 External Validity: Generalizability
- 22.4.3 Summary Points

### 22.5 Translation into Clinical Practice
- 22.5.1 Score Chart for Choosing Thrombolytic Therapy
- 22.5.2 Predictions for Choosing Thrombolytic Therapy
- 22.5.3 Covariate Adjustment in GUSTO-I

### 22.6 Concluding Remarks

### 23 Case Study on Survival Analysis: Prediction of Secondary Cardiovascular Events
- 23.1 Prognosis in the SMART Study
  - 23.1.1 Patients in SMART
- 23.2 General Considerations in SMART
  - 23.2.1 Research Question and Intended Application
  - 23.2.2 Outcome and Predictors
  - 23.2.3 Study Design and Analysis
- 23.3 Data Inspection Steps in the SMART Cohort
- 23.4 Coding of Predictors
  - 23.4.1 Extreme Values
  - 23.4.2 Transforming Continuous Predictors
  - 23.4.3 Combining Predictors with Similar Effects
- 23.5 Model Specification
  - 23.5.1 Selection
- 23.6 Model Estimation, Performance, Validation, and Presentation
  - 23.6.1 Model Estimation
  - 23.6.2 Model Performance
  - 23.6.3 Model Validation: Stability
  - 23.6.4 Model Validation: Optimism
  - 23.6.5 Model Presentation
- 23.7 Concluding Remarks

### 24 Lessons from Case Studies
- 24.1 Sample Size
  - 24.1.1 Example: Sample Size and Number of Predictors
  - 24.1.2 Number of Predictors
  - 24.1.3 Potential Solutions
- 24.2 Validation
  - 24.2.1 Examples of Internal and External Validation
- 24.3 Subject Matter Knowledge
- 24.4 Data Sets
  - 24.4.1 GUSTO-I Prediction Models
  - 24.4.2 Modern Learning Methods in GUSTO-I
24.4.3 Modelling Strategies in Small Data Sets from GUSTO-I ........................................ 453
24.4.4 SMART Case Study ........................................ 453
24.4.5 Testicular Cancer Case Study .............................. 455
24.4.6 Abdominal Aortic Aneurysm Case Study .................. 455
24.4.7 Traumatic Brain Injury Data Set ............................ 459
24.5 Concluding Remarks ........................................... 459
