Preface ................................................................. vii
Acknowledgements ............................................. xi

1 Introduction ......................................................... 1
  1.1 Prognosis and Prediction in Medicine ......................... 1
    1.1.1 Prediction Models and Decision-Making ................ 1
  1.2 Statistical Modelling for Prediction .......................... 2
    1.2.1 Model Uncertainty ....................................... 3
    1.2.2 Sample Size ............................................. 4
  1.3 Structure of the Book ....................................... 5
    1.3.1 Part I: Prediction Models in Medicine ................. 5
    1.3.2 Part II: Developing Valid Prediction Models .......... 6
    1.3.3 Part III: Generalizability of Prediction Models ..... 6
    1.3.4 Part IV: Applications ................................... 7
    1.3.5 Questions and Exercises ............................... 7

Part I Prediction Models in Medicine

2 Applications of Prediction Models .......................... 9
  2.1 Applications: Medical Practice and Research ............... 11
  2.2 Prediction Models for Public Health ......................... 12
    2.2.1 Targeting of Preventive Interventions ................ 12
    2.2.2 Example: Incidence of Breast Cancer ................ 12
  2.3 Prediction Models for Clinical Practice .................... 13
    2.3.1 Decision Support on Test Ordering .................... 13
    2.3.2 Example: Predicting Renal Artery Stenosis .......... 14
    2.3.3 Starting Treatment: the Treatment Threshold .......... 15
    2.3.4 Example: Probability of Deep Venous Thrombosis .... 16
    2.3.5 Intensity of Treatment ................................ 16
    2.3.6 Example: Defining a Poor Prognosis Subgroup in Cancer .............................. 18
2.3.7 Cost-Effectiveness of Treatment 18
2.3.8 Delaying Treatment 19
2.3.9 Example: Spontaneous Pregnancy Chances 19
2.3.10 Surgical Decision-Making 21
2.3.11 Example: Replacement of Risky Heart Valves 21

2.4 Prediction Models for Medical Research 23
2.4.1 Inclusion and Stratification in an RCT 23
2.4.2 Example: Selection for TBI Trials 24
2.4.3 Covariate Adjustment in an RCT 25
2.4.4 Gain in Power by Covariate Adjustment 26
2.4.5 Example: Analysis of the GUSTO-III Trial 27
2.4.6 Prediction Models and Observational Studies 27
2.4.7 Propensity Scores 28
2.4.8 Example: Statin Treatment Effects 28
2.4.9 Provider Profiling 29
2.4.10 Example: Ranking Cardiac Outcome 29

2.5 Concluding Remarks 30

3 Study Design for Prediction Models 33
3.1 Study Design 33
3.2 Cohort Studies for Prognosis 33
3.2.1 Retrospective Designs 35
3.2.2 Example: Predicting Early Mortality in Oesophageal Cancer 35
3.2.3 Prospective Designs 35
3.2.4 Example: Predicting Long-Term Mortality in Oesophageal Cancer 36
3.2.5 Registry Data 36
3.2.6 Example: Surgical Mortality in Oesophageal Cancer 37
3.2.7 Nested Case–Control Studies 37
3.2.8 Example: Perioperative Mortality in Major Vascular Surgery 38

3.3 Studies for Diagnosis 38
3.3.1 Cross-Sectional Study Design and Multivariable Modelling 38
3.3.2 Example: Diagnosing Renal Artery Stenosis 38
3.3.3 Case–Control Studies 39
3.3.4 Example: Diagnosing Acute Appendicitis 39

3.4 Predictors and Outcome 39
3.4.1 Strength of Predictors 39
3.4.2 Categories of Predictors 40
3.4.3 Costs of Predictors 40
3.4.4 Determinants of Prognosis 41
3.4.5 Prognosis in Oncology 41
3.5 Reliability of Predictors

3.5.1 Observer Variability

3.5.2 Example: Histology in Barrett’s Oesophagus

3.5.3 Biological Variability

3.5.4 Regression Dilution Bias

3.5.5 Example: Simulation Study on Reliability of a Binary Predictor

3.5.6 Choice of Predictors

3.6 Outcome

3.6.1 Types of Outcome

3.6.2 Survival Endpoints

3.6.3 Example: Relative Survival in Cancer Registries

3.6.4 Composite End Points

3.6.5 Example: Mortality and Composite End Points in Cardiology

3.6.6 Choice of Prognostic Outcome

3.6.7 Diagnostic End Points

3.6.8 Example: PET Scans in Oesophageal Cancer

3.7 Phases of Biomarker Development

3.8 Statistical Power

3.8.1 Statistical Power to Identify Predictor Effects

3.8.2 Examples of Statistical Power Calculations

3.8.3 Statistical Power for Reliable Predictions

3.9 Concluding Remarks

4 Statistical Models for Prediction

4.1 Continuous Outcomes

4.1.1 Examples of Linear Regression

4.1.2 Economic Outcomes

4.1.3 Example: Prediction of Costs

4.1.4 Transforming the Outcome

4.1.5 Performance: Explained Variation

4.1.6 More Flexible Approaches

4.2 Binary Outcomes

4.2.1 $R^2$ in Logistic Regression Analysis

4.2.2 Calculation of $R^2$ on the Log Likelihood Scale

4.2.3 Models Related to Logistic Regression

4.2.4 Bayes Rule

4.2.5 Example: Calculations with Likelihood Ratios

4.2.6 Prediction with Naïve Bayes

4.2.7 Examples of Naïve Bayes

4.2.8 Calibration and Naïve Bayes

4.2.9 Logistic Regression and Bayes

4.2.10 More Flexible Approaches to Binary Outcomes
## Contents

4.2.11 Classification and Regression Trees .......................... 67  
4.2.12 Example: Mortality in Acute MI Patients .................... 67  
4.2.13 Advantages and Disadvantages of Tree Models ............... 67  
4.2.14 Trees as Special Cases of Logistic Regression Modelling .................................................. 69  
4.2.14 Other Methods for Binary Outcomes .......................... 70  
4.2.15 Summary on Binary Outcomes ............................... 71  
4.3 Categorical Outcomes ........................................ 71  
4.3.1 Polytomous Logistic Regression ............................... 72  
4.3.2 Example: Histology of Residual Masses ....................... 72  
4.3.3 Alternative Models .......................................... 73  
4.3.4 Comparison of Modelling Approaches .......................... 74  
4.4 Ordinal Outcomes ............................................. 74  
4.4.1 Proportional Odds Logistic Regression ......................... 75  
4.4.2 Alternative: Continuation Ratio Model ....................... 77  
4.4.3 Alternative Models .......................................... 73  
4.4.4 Comparison of Modelling Approaches .......................... 74  
4.5 Survival Outcomes ............................................. 77  
4.5.1 Cox Proportional Hazards Regression ......................... 77  
4.5.2 Predicting with Cox .......................................... 78  
4.5.3 Proportionality Assumption .................................. 78  
4.5.4 Kaplan–Meier Analysis ....................................... 79  
4.5.5 Example: NFI After Treatment of Leprosy ..................... 79  
4.5.6 Parametric Survival ......................................... 80  
4.5.7 Example: Replacement of Risky Heart Valves ................ 80  
4.5.8 Summary on Survival Outcomes ............................... 81  
4.6 Concluding Remarks ........................................... 81  
5 Overfitting and Optimism in Prediction Models ..................... 83  
5.1 Overfitting and Optimism ........................................ 83  
5.1.1 Example: Surgical Mortality in Oesophagectomy .............. 84  
5.1.2 Variability within One Centre ................................. 84  
5.1.3 Variability between Centres: Noise vs. True Heterogeneity .................................................. 85  
5.1.4 Predicting Mortality by Centre: Shrinkage .................... 87  
5.2 Overfitting in Regression Models ................................ 87  
5.2.1 Model Uncertainty: Testimation ............................... 87  
5.2.2 Other Biases ................................................. 89  
5.2.3 Overfitting by Parameter Uncertainty .......................... 90  
5.2.4 Optimism in Model Performance .............................. 90  
5.2.5 Optimism-Corrected Performance ............................. 92  
5.3 Bootstrap Resampling ........................................... 92  
5.3.1 Applications of the Bootstrap ................................. 93  
5.3.2 Bootstrapping for Regression Coefficients .................... 93  
5.3.3 Bootstrapping for Optimism Correction ....................... 94  
5.3.4 Calculation of Optimism-Corrected Performance ............ 95
8 Case Study on Dealing with Missing Values .......................... 139
8.1 Introduction ....................................................... 139
8.1.1 Aim .......................................................... 139
8.1.2 Patient Selection .............................................. 140
8.1.3 Selection of Potential Predictors .............................. 140
8.1.4 Coding and Time Dependency of Predictors ................ 141
8.2 Missing Values in the IMPACT Study ............................. 142
8.2.1 Missing Values in Outcome ................................... 142
8.2.2 Quantification of Missingness of Predictors ................ 143
8.2.3 Patterns of Missingness ....................................... 144
8.3 Imputation of Missing Predictor Values .......................... 147
8.3.1 Correlations Between Predictors .............................. 147
8.3.2 Imputation Model ............................................. 147
8.3.3 Distributions of Imputed Values .............................. 149
8.4 Estimating Adjusted Effects ...................................... 149
8.4.1 Adjusted Analysis for Complete Predictors: Age and Motor Score ...................... 151
8.4.2 Adjusted Analysis for Incomplete Predictors: Pupils .................. 154
8.5 Multivariable Analyses ........................................... 155
8.6 Concluding Remarks ................................................ 155

9 Coding of Categorical and Continuous Predictors .................... 159
9.1 Categorical Predictors ............................................. 159
9.1.1 Examples of Categorical Coding ............................... 160
9.2 Continuous Predictors ............................................. 161
9.2.1 Examples of Continuous Predictors ......................... 161
9.2.2 Categorization of Continuous Predictors ................... 162
9.3 Non-Linear Functions for Continuous Predictors ................ 163
9.3.1 Polynomials ................................................... 164
9.3.2 Fractional Polynomials ....................................... 164
9.3.3 Splines ......................................................... 165
9.3.4 Example: Functional Forms with RCS or FP .................. 166
9.3.5 Extrapolation and Robustness ................................. 166
9.4 Outliers and Truncation ........................................ 167
  9.4.1 Example: Glucose Values and Outcome of TBI .... 168
9.5 Interpretation of Effects of Continuous Predictors .......... 170
  9.5.1 Example: Predictor Effects in TBI ....................... 171
9.6 Concluding Remarks ........................................... 172
  9.6.1 Software .................................................... 172

10 Restrictions on Candidate Predictors ............................ 175
  10.1 Selection Before Studying the Predictor–Outcome
       Relationship .................................................. 175
    10.1.1 Selection Based on Subject Knowledge ............... 175
    10.1.2 Example: Too Many Candidate Predictors .......... 176
    10.1.3 Meta-Analysis for Candidate Predictors ............ 176
    10.1.4 Example: Predictors in Testicular Cancer .......... 176
    10.1.5 Selection Based on Distributions ................... 177
  10.2 Combining Similar Variables .................................. 177
    10.2.1 Example: Coding of Comorbidity .................... 178
    10.2.2 Assessing the Equal Weights Assumption .......... 178
    10.2.3 Logical Weighting ....................................... 179
    10.2.4 Statistical Combination .................................. 180
  10.3 Averaging Effects ............................................ 180
    10.3.1 Example: Chlamydia Trachomatis Infection Risks .... 180
    10.3.2 Example: Acute Surgery Risk Relevant for
        Elective Patients? ......................................... 180
  10.4 Case study: Family History for Prediction of a
       Genetic Mutation ........................................... 181
    10.4.1 Clinical Background and Patient Data ............... 181
    10.4.2 Similarity of Effects ...................................... 182
    10.4.3 CRC and Adenoma in a Proband ...................... 184
    10.4.4 Age of CRC in Family History ....................... 185
    10.4.5 Full Prediction Model for Mutations ............... 186
  10.5 Concluding Remarks .......................................... 187

11 Selection of Main Effects ........................................... 191
  11.1 Predictor Selection ........................................... 191
    11.1.1 Reduction Before Modelling .......................... 191
    11.1.2 Reduction While Modelling ............................ 192
    11.1.3 Collinearity .............................................. 192
    11.1.4 Parsimony ................................................... 193
    11.1.5 Should Non-Significant Variables Be Removed? .... 193
    11.1.6 Summary Points ........................................... 194
  11.2 Stepwise Selection ............................................ 194
    11.2.1 Stepwise Selection Variants ......................... 194
    11.2.2 Stopping Rules in Stepwise Selection .............. 195
Advantages of Stepwise Methods .................. 196
Disadvantages of Stepwise Methods .................. 197
  11.4.1 Instability of selection .................. 197
  11.4.2 Biased Estimation of Coefficients ............. 199
  11.4.3 Bias of Stepwise Selection and Events Per Variable 199
  11.4.4 Misspecification of Variability .............. 201
  11.4.5 Exaggeration of P-Values .................. 204
  11.4.6 Predictions of Worse Quality Than from a Full Model 204
Influence of Noise Variables ..................... 205
Univariate Analyses and Model Specification ......... 206
  11.6.1 Pros and Cons of Univariate Pre-Selection ........ 207
  11.6.2 Testing of Predictors within Domains ............ 207
Modern Selection Methods ..................... 207
  11.7.1 Bootstrapping for Selection ............... 208
  11.7.2 Bagging and Boosting .................. 208
  11.7.3 Bayesian Model Averaging (BMA) ............ 208
  11.7.4 Practical Advantages of BMA ............. 209
  11.7.5 Shrinkage of Regression Coefficients to Zero 210
Concluding Remarks ...................... 210

Assumptions in Regression Models: Additivity and Linearity 213
  12.1 Additivity and Interaction Terms .............. 213
    12.1.1 Potential Interaction Terms to Consider ....... 214
    12.1.2 Interactions with Treatment ............... 214
    12.1.3 Other Potential Interactions ............. 215
    12.1.4 Example: Time and Survival After Valve Replacement .......... 216
  12.2 Selection, Estimation and Performance with Interaction Terms 216
    12.2.1 Example: Age Interactions in GUSTO-I .......... 217
    12.2.2 Estimation of Interaction Terms ............ 217
    12.2.3 Better Prediction with Interaction Terms? ...... 219
    12.2.4 Summary Points ...................... 220
  12.3 Non-linearity in Multivariable Analysis ........ 220
    12.3.1 Multivariable Restricted Cubic Splines (RCS) .... 220
    12.3.2 Multivariable Fractional Polynomials (FP) ...... 221
    12.3.3 Multivariable Splines in GAM ............ 222
  12.4 Example: Non-Linearity in Testicular Cancer Case Study .... 222
    12.4.1 Details of Multivariable FP and GAM Analyses .... 224
    12.4.2 GAM in Univariate and Multivariable Analysis .... 224
    12.4.3 Predictive Performance .................. 226
    12.4.4 R code for Non-Linear Modelling ........... 227
  12.5 Concluding Remarks ...................... 227
    12.5.1 Recommendations ..................... 228
13 Modern Estimation Methods

13.1 Predictions from Regression and Other Models

13.2 Shrinkage

13.2.1 Uniform Shrinkage

13.2.2 Uniform Shrinkage in GUSTO-I

13.3 Penalized Estimation

13.3.1 Penalized Maximum Likelihood Estimation

13.3.2 Penalized ML in Sample

13.3.3 Shrinkage, Penalization, and Model Selection

13.4 Lasso

13.4.1 Estimation of Lasso Model

13.4.2 Lasso in GUSTO-I

13.4.3 Predictions after Shrinkage

13.4.4 Model Performance after Shrinkage

13.5 Concluding Remarks

14 Estimation with External Information

14.1 Combining Literature and Individual Patient Data

14.1.1 Adaptation Method 1

14.1.2 Adaptation Method 2

14.1.3 Estimation

14.1.4 Simulation Results

14.1.5 Performance of Adapted Model

14.1.6 Improving Calibration

14.2 Example: Mortality of Aneurysm Surgery

14.2.1 Meta-Analysis

14.2.2 Individual Patient Data Analysis

14.2.3 Adaptation Results

14.3 Alternative Approaches

14.3.1 Overall Calibration

14.3.2 Bayesian Methods: Using Data Priors to Regression Modelling

14.3.3 Example: Predicting Neonatal Death

14.3.4 Example: Mortality of Aneurysm Surgery

14.4 Concluding Remarks

15 Evaluation of Performance

15.1 Overall Performance Measures

15.1.1 Explained Variation: $R^2$

15.1.2 Brier Score

15.1.3 Example: Performance of Testicular Cancer Prediction Model

15.1.4 Overall Performance Measures in Survival
Part III Generalizability of Prediction Models

19 Patterns of External Validity ........................................ 333

19.1 Determinants of External Validity ............................. 335
19.1.1 Case-Mix ....................................................... 335
19.1.2 Differences in Case-Mix ................................. 336
19.1.3 Differences in Regression Coefficients ................. 336

19.2 Impact on Calibration, Discrimination, and Clinical
Usefulness .......................................................... 337
19.2.1 Simulation Set-Up ........................................... 338
19.2.2 Performance Measures .................................... 339

19.3 Distribution of Predictors ........................................ 340
19.3.1 More- or Less-Severe Case-Mix According to X ...... 340
19.3.2 Example: Interpretation of Testicular Cancer
Validation .............................................................. 341
19.3.3 More or Less Heterogeneous Case-Mix
According to X ...................................................... 341
19.3.4 More- or Less-Severe Case-Mix According to Z ...... 342
19.3.5 More or Less Heterogeneous Case-Mix
According to Z ...................................................... 344

19.4 Distribution of Observed Outcomes $Y$ ......................... 344

19.5 Coefficients $\beta$ .................................................. 345
19.5.1 Coefficient of Linear Predictor $< 1$ ..................... 345
19.5.2 Coefficients Different ....................................... 346
19.5.3 R Code ......................................................... 346
19.5.4 Influence of Different Coefficients ..................... 347
19.5.5 Other Scenarios of Invalidity ............................ 348
19.5.6 Summary of Patterns of Invalidity ..................... 348

19.6 Reference Values for Performance .............................. 349
19.6.1 Calculation of Reference Values ....................... 349
19.6.2 R Code ......................................................... 350
19.6.3 Performance with Refitting ............................... 350
19.6.4 Examples: Testicular Cancer and TBI ................. 351
19.7 Estimation of Performance ............................................. 352
  19.7.1 Uncertainty in Validation of Performance ............... 352
  19.7.2 Estimating Standard Errors in Validation Studies ....... 354
  19.7.3 Summary Points ...................................................... 354
19.8 Design of External Validation Studies .......................... 355
  19.8.1 Power of External Validation Studies ...................... 355
  19.8.2 Required Sample Sizes for Validation Studies .......... 356
  19.8.3 Summary Points ...................................................... 357
19.9 Concluding Remarks .................................................. 358

20 Updating for a New Setting .......................................... 361
  20.1 Updating the Intercept ................................................ 361
    20.1.1 Simple Updating Methods ...................................... 362
    20.1.2 Bayesian Updating ................................................. 362
  20.2 Approaches to More-Extensive Updating ......................... 363
    20.2.1 A comparison of Eight Updating Methods ............... 364
  20.3 Case Study: Validation and Updating in GUSTO-I ............ 366
    20.3.1 Validity of TIMI-II Model for GUSTO-I .................. 366
    20.3.2 Updating the TIMI-II Model for GUSTO-I ............... 368
    20.3.3 Performance of Updated Models ......................... 369
    20.3.4 R Code for Updating Methods ............................... 370
  20.4 Shrinkage and Updating .............................................. 371
    20.4.1 Example: Shrinkage towards Re-calibrated Values in
     GUSTO-I ................................................................. 371
    20.4.2 R code for Shrinkage and Penalization in Updating ... 372
  20.5 Sample Size and Updating Strategy .............................. 373
    20.5.1 Simulations of Sample Size, Shrinkage, and Updating
     Strategy ............................................................... 374
  20.6 Validation and Updating of Tree Models ......................... 376
    20.6.1 Example: Tree Modelling in Testicular Cancer .......... 377
  20.7 Validation and Updating of Survival Models ................... 378
    20.7.1 Case Study: Validation of a Simple Index for
     Non-Hodgkin’s Lymphoma ........................................... 379
    20.7.2 Updating the Prognostic Index ................................ 380
    20.7.3 Re-calibration for Groups by Time Points ............... 380
    20.7.4 Re-calibration with a Cox Regression Model ............ 381
    20.7.5 Parametric Re-calibration ...................................... 382
    20.7.6 Summary Points ...................................................... 384
  20.8 Continuous Updating ................................................ 384
    20.8.1 A Continuous Updating Strategy ............................. 385
    20.8.2 Example: Continuous Updating in GUSTO-I ............... 386
  20.9 Concluding Remarks ................................................ 388
21 Updating for Multiple Settings

21.1 Differences Between Settings

21.1.1 Testing for Calibration-in-the Large

21.1.2 Illustration of Heterogeneity in GUSTO-I

21.1.3 Updating for Better Calibration-in-the Large

21.1.4 Empirical Bayes Estimates

21.1.5 Illustration of Updating in GUSTO-I

21.1.6 Testing and Updating of Predictor Effects

21.1.7 Heterogeneity of Predictor Effects in GUSTO-I

21.1.8 R Code for Random Effect Analyses

21.2 Provider Profiling

21.2.1 Indicators for Differences Between Centres

21.2.2 Ranking of Centres

21.2.3 Example: Provider Profiling in Stroke

21.2.4 Testing of Differences Between Centres

21.2.5 Estimation of Differences Between Centres

21.2.6 Uncertainty in Differences

21.2.7 Ranking of Centres

21.2.8 Essential R Code for Provider Profiling

21.2.9 Guidelines for Provider Profiling

21.3 Concluding Remarks

21.3.1 Bibliographic Notes

Part IV Applications

22 Prediction of a Binary Outcome: 30-Day Mortality After Acute Myocardial Infarction

22.1 GUSTO-I Study

22.1.1 Acute Myocardial Infarction

22.1.2 Treatment Results from GUSTO-I

22.1.3 Prognostic Modelling in GUSTO-I

22.2 General Considerations of Model Development

22.2.1 Research Question and Intended Application

22.2.2 Outcome and Predictors

22.2.3 Study Design and Analysis

22.3 Seven Modelling Steps in GUSTO-I

22.3.1 Data Inspection

22.3.2 Coding of Predictors

22.3.3 Model Specification

22.3.4 Model Estimation

22.3.5 Model Performance

22.3.6 Model Validation

22.3.7 Presentation
22.4 Validity ................................. 421
22.4.1 Internal Validity: Overfitting .......... 421
22.4.2 External Validity: Generalizability .... 421
22.4.3 Summary Points ....................... 421
22.5 Translation into Clinical Practice .......... 422
22.5.1 Score Chart for Choosing Thrombolytic Therapy .... 422
22.5.2 Predictions for Choosing Thrombolytic Therapy .... 423
22.5.3 Covariate Adjustment in GUSTO-I .... 424
22.6 Concluding Remarks ...................... 425

23 Case Study on Survival Analysis: Prediction
of Secondary Cardiovascular Events .......... 427
23.1 Prognosis in the SMART Study ............ 427
23.1.1 Patients in SMART ..................... 428
23.2 General Considerations in SMART ......... 429
23.2.1 Research Question and Intended Application .... 429
23.2.2 Outcome and Predictors ............... 429
23.2.3 Study Design and Analysis ............ 432
23.3 Data Inspection Steps in the SMART Cohort .... 432
23.4 Coding of Predictors ..................... 435
23.4.1 Extreme Values ....................... 435
23.4.2 Transforming Continuous Predictors .... 436
23.4.2 Combining Predictors with Similar Effects .... 437
23.5 Model Specification ....................... 438
23.5.1 Selection ......................... 440
23.6 Model Estimation, Performance, Validation, and Presentation .... 440
23.6.1 Model Estimation ..................... 440
23.6.2 Model Performance .................... 442
23.6.3 Model Validation: Stability ............ 442
23.6.4 Model Validation: Optimism ............ 444
23.6.5 Model Presentation .................... 444
23.7 Concluding Remarks ....................... 444

24 Lessons from Case Studies .................. 447
24.1 Sample Size .............................. 447
24.1.1 Example: Sample Size and Number of Predictors .... 447
24.1.2 Number of Predictors .................. 448
24.1.3 Potential Solutions .................... 449
24.2 Validation ................................ 450
24.2.1 Examples of Internal and External Validation .... 450
24.3 Subject Matter Knowledge .................. 451
24.4 Data Sets ................................ 452
24.4.1 GUSTO-I Prediction Models ............. 453
24.4.2 Modern Learning Methods in GUSTO-I .... 453
24.4.3 Modelling Strategies in Small Data Sets from GUSTO-I ...................................................... 453
24.4.4 SMART Case Study .......................................................... 453
24.4.5 Testicular Cancer Case Study ........................................... 455
24.4.6 Abdominal Aortic Aneurysm Case Study ......................... 455
24.4.7 Traumatic Brain Injury Data Set ................................. 459
24.5 Concluding Remarks .......................................................... 459
