Contents

Part I Basic Theory

1 Introduction 3
1.1 Definition and History 3
1.2 Speaker Recognition Branches 5
1.2.1 Speaker Verification (Speaker Authentication) 5
1.2.2 Speaker Identification (Closed-Set and Open-Set) 7
1.2.3 Speaker and Event Classification 8
1.2.4 Speaker Segmentation 9
1.2.5 Speaker Detection 11
1.2.6 Speaker Tracking 11
1.3 Speaker Recognition Modalities 12
1.3.1 Text-Dependent Speaker Recognition 12
1.3.2 Text-Independent Speaker Recognition 13
1.3.3 Text-Prompted Speaker Recognition 14
1.3.4 Knowledge-Based Speaker Recognition 15
1.4 Applications 16
1.4.1 Financial Applications 16
1.4.2 Forensic and Legal Applications 18
1.4.3 Access Control (Security) Applications 19
1.4.4 Audio and Video Indexing (Diarization) Applications 19
1.4.5 Surveillance Applications 20
1.4.6 Teleconferencing Applications 21
1.4.7 Proctorless Oral Testing 21
1.4.8 Other Applications 23
1.5 Comparison to Other Biometrics 23
1.5.1 Deoxyribonucleic Acid (DNA) 24
1.5.2 Ear 25
1.5.3 Face 27
1.5.4 Fingerprint and Palm 28
1.5.5 Hand and Finger Geometry 30

1.5.6 Iris . . . 30
1.5.7 Retina . . . 31
1.5.8 Thermography . . . 32
1.5.9 Vein . . . 32
1.5.10 Gait . . . 33
1.5.11 Handwriting . . . 34
1.5.12 Keystroke . . . 35
1.5.13 Multimodal . . . 35
1.5.14 Summary of Speaker Biometric Characteristics . . . 37
References . . . 38

2 The Anatomy of Speech . . . 43
2.1 The Human Vocal System . . . 44
2.1.1 Trachea and Larynx . . . 44
2.1.2 Vocal Folds (Vocal Chords) . . . 44
2.1.3 Pharynx . . . 47
2.1.4 Soft Palate and the Nasal System . . . 48
2.1.5 Hard Palate . . . 48
2.1.6 Oral Cavity Exit . . . 48
2.2 The Human Auditory System . . . 48
2.2.1 The Ear . . . 50
2.3 The Nervous System and the Brain . . . 51
2.3.1 Neurons – Elementary Building Blocks . . . 52
2.3.2 The Brain . . . 54
2.3.3 Function Localization in the Brain . . . 59
2.3.4 Specializations of the Hemispheres of the Brain . . . 62
2.3.5 Audio Production . . . 64
2.3.6 Auditory Perception . . . 66
2.3.7 Speaker Recognition . . . 71
References . . . 72

3 Signal Representation of Speech . . . 75
3.1 Sampling The Audio . . . 77
3.1.1 The Sampling Theorem . . . 78
3.1.2 Convergence Criteria for the Sampling Theorem . . . 84
3.1.3 Extensions of the Sampling Theorem . . . 84
3.2 Quantization and Amplitude Errors . . . 85
3.3 The Speech Waveform . . . 87
3.4 The Spectrogram . . . 87
3.5 Formant Representation . . . 89
3.6 Practical Sampling and Associated Errors . . . 92
3.6.1 Ideal Sampler . . . 98
3.6.2 Aliasing . . . 99
3.6.3 Truncation Error . . . 102
3.6.4 Jitter . . . 103

3.6.5 Loss of Information . . . 104
References . . . 105

4 Phonetics and Phonology . . . 107
4.1 Phonetics . . . 107
4.1.1 Initiation . . . 109
4.1.2 Phonation . . . 109
4.1.3 Articulation . . . 110
4.1.4 Coordination . . . 111
4.1.5 Vowels . . . 112
4.1.6 Pulmonic Consonants . . . 115
4.1.7 Whisper . . . 119
4.1.8 Whistle . . . 119
4.1.9 Non-Pulmonic Consonants . . . 120
4.2 Phonology and Linguistics . . . 122
4.2.1 Phonemic Utilization Across Languages . . . 122
4.2.2 Whisper . . . 125
4.2.3 Importance of Vowels in Speaker Recognition . . . 127
4.2.4 Evolution of Languages toward Discriminability . . . 129
4.3 Suprasegmental Features of Speech . . . 131
4.3.1 Prosodic Features . . . 132
4.3.2 Metrical features of Speech . . . 138
4.3.3 Temporal features of Speech . . . 140
4.3.4 Co-Articulation . . . 140
References . . . 141

5 Signal Processing of Speech and Feature Extraction . . . 143
5.1 Auditory Perception . . . 144
5.1.1 Pitch . . . 146
5.1.2 Loudness . . . 149
5.1.3 Timbre . . . 151
5.2 The Sampling Process . . . 152
5.2.1 Anti-Aliasing . . . 153
5.2.2 Hi-Pass Filtering . . . 153
5.2.3 Pre-Emphasis . . . 153
5.2.4 Quantization . . . 155
5.3 Spectral Analysis and Direct Method Features . . . 157
5.3.1 Framing the Signal . . . 160
5.3.2 Windowing . . . 162
5.3.3 Discrete Fourier Transform (DFT) and Spectral Estimation 167
5.3.4 Frequency Warping . . . 169
5.3.5 Magnitude Warping . . . 172
5.3.6 Mel Frequency Cepstral Coefficients (MFCC) . . . 173
5.3.7 Mel Cepstral Dynamics . . . 175
5.4 Linear Predictive Cepstral Coefficients (LPCC) . . . 176

5.4.1 Autoregressive (AR) Estimate of the PSD . . . 177
5.4.2 LPC Computation . . . 184
5.4.3 Partial Correlation (PARCOR) Features . . . 185
5.4.4 Log Area Ratio (LAR) Features . . . 189
5.4.5 Linear Predictive Cepstral Coefficient (LPCC) Features . . . 189
5.5 Perceptual Linear Predictive (PLP) Analysis . . . 190
5.5.1 Spectral Analysis . . . 191
5.5.2 Bark Frequency Warping . . . 191
5.5.3 Equal-Loudness Pre-emphasis . . . 192
5.5.4 Magnitude Warping . . . 193
5.5.5 Inverse DFT . . . 193
5.6 Other Features . . . 193
5.6.1 Wavelet Filterbanks . . . 194
5.6.2 Instantaneous Frequencies . . . 197
5.6.3 Empirical Mode Decomposition (EMD) . . . 198
5.7 Signal Enhancement and Pre-Processing . . . 199
References . . . 199

6 Probability Theory and Statistics . . . 205
6.1 Set Theory . . . 205
6.1.1 Equivalence and Partitions . . . 208
6.1.2 R-Rough Sets (Rough Sets) . . . 210
6.1.3 Fuzzy Sets . . . 211
6.2 Measure Theory . . . 211
6.2.1 Measure . . . 212
6.2.2 Multiple Dimensional Spaces . . . 216
6.2.3 Metric Space . . . 217
6.2.4 Banach Space (Normed Vector Space) . . . 218
6.2.5 Inner Product Space (Dot Product Space) . . . 219
6.2.6 Infinite Dimensional Spaces (Pre-Hilbert and Hilbert) . . . 219
6.3 Probability Measure . . . 221
6.4 Integration . . . 227
6.5 Functions . . . 228
6.5.1 Probability Density Function . . . 229
6.5.2 Densities in the Cartesian Product Space . . . 232
6.5.3 Cumulative Distribution Function . . . 235
6.5.4 Function Spaces . . . 236
6.5.5 Transformations . . . 238
6.6 Statistical Moments . . . 239
6.6.1 Mean . . . 239
6.6.2 Variance . . . 242
6.6.3 Skewness (skew) . . . 245
6.6.4 Kurtosis . . . 246
6.7 Discrete Random Variables . . . 247
6.7.1 Combinations of Random Variables . . . 250

6.7.2 Convergence of a Sequence . . . 250
6.8 Sufficient Statistics . . . 251
6.9 Moment Estimation . . . 253
6.9.1 Estimating the Mean . . . 253
6.9.2 Law of Large Numbers (LLN) . . . 254
6.9.3 Different Types of Mean . . . 257
6.9.4 Estimating the Variance . . . 258
6.10 Multi-Variate Normal Distribution . . . 259
References . . . 261

7 Information Theory . . . 265
7.1 Sources . . . 266
7.2 The Relation between Uncertainty and Choice . . . 269
7.3 Discrete Sources . . . 269
7.3.1 Entropy or Uncertainty . . . 270
7.3.2 Generalized Entropy . . . 278
7.3.3 Information . . . 279
7.3.4 The Relation between Information and Entropy . . . 280
7.4 Discrete Channels . . . 282
7.5 Continuous Sources . . . 284
7.5.1 Differential Entropy (Continuous Entropy) . . . 284
7.6 Relative Entropy . . . 286
7.6.1 Mutual Information . . . 291
7.7 Fisher Information . . . 294
References . . . 299

8 Metrics and Divergences . . . 301
8.1 Distance (Metric) . . . 301
8.1.1 Distance Between Sequences . . . 302
8.1.2 Distance Between Vectors and Sets of Vectors . . . 302
8.1.3 Hellinger Distance . . . 304
8.2 Divergences and Directed Divergences . . . 304
8.2.1 Kullback-Leibler's Directed Divergence . . . 305
8.2.2 Jeffreys' Divergence . . . 305
8.2.3 Bhattacharyya Divergence . . . 306
8.2.4 Matsushita Divergence . . . 307
8.2.5 F-Divergence . . . 308
8.2.6 δ-Divergence . . . 309
8.2.7 χ^{α} Directed Divergence . . . 310
References . . . 310

9 Decision Theory . . . 313
9.1 Hypothesis Testing . . . 313
9.2 Bayesian Decision Theory . . . 316
9.2.1 Binary Hypothesis . . . 320

9.2.2 Relative Information and Log Likelihood Ratio 321
9.3 Bayesian Classifier 322
9.3.1 Multi-Dimensional Normal Classification 326
9.3.2 Classification of a Sequence 328
9.4 Decision Trees 331
9.4.1 Tree Construction 332
9.4.2 Types of Questions 333
9.4.3 Maximum Likelihood Estimation (MLE) 336
References 338

10 Parameter Estimation 341
10.1 Maximum Likelihood Estimation 342
10.2 Maximum A-Posteriori (MAP) Estimation 344
10.3 Maximum Entropy Estimation 345
10.4 Minimum Relative Entropy Estimation 346
10.5 Maximum Mutual Information Estimation (MMIE) 348
10.6 Model Selection 349
10.6.1 Akaike Information Criterion (AIC) 350
10.6.2 Bayesian Information Criterion (BIC) 353
References 354

11 Unsupervised Clustering and Learning 357
11.1 Vector Quantization (VQ) 358
11.2 Basic Clustering Techniques 359
11.2.1 Standard k-Means (Lloyd) Algorithm 360
11.2.2 Generalized Clustering 363
11.2.3 Overpartitioning 364
11.2.4 Merging 364
11.2.5 Modifications to the k-Means Algorithm 365
11.2.6 k-Means Wrappers 368
11.2.7 Rough k-Means 375
11.2.8 Fuzzy k-Means 377
11.2.9 k-Harmonic Means Algorithm 378
11.2.10 Hybrid Clustering Algorithms 380
11.3 Estimation using Incomplete Data 381
11.3.1 Expectation Maximization (EM) 381
11.4 Hierarchical Clustering 388
11.4.1 Agglomerative (Bottom-Up) Clustering (AHC) 389
11.4.2 Divisive (Top-Down) Clustering (DHC) 389
11.5 Semi-Supervised Learning 390
References 390

12 Transformation . . . 393
12.1 Principal Component Analysis (PCA) . . . 394
12.1.1 Formulation . . . 394
12.2 Generalized Eigenvalue Problem . . . 397
12.3 Nonlinear Component Analysis . . . 399
12.3.1 Kernel Principal Component Analysis (Kernel PCA) . . . 400
12.4 Linear Discriminant Analysis (LDA) . . . 401
12.4.1 Integrated Mel Linear Discriminant Analysis (IMELDA) . 404
12.5 Factor Analysis . . . 404
References . . . 409

13 Hidden Markov Modeling (HMM) . . . 411
13.1 Memoryless Models . . . 413
13.2 Discrete Markov Chains . . . 415
13.3 Markov Models . . . 416
13.4 Hidden Markov Models . . . 418
13.5 Model Design and States . . . 421
13.6 Training and Decoding . . . 423
13.6.1 Trellis Diagram Representation . . . 428
13.6.2 Forward Pass Algorithm . . . 430
13.6.3 Viterbi Algorithm . . . 432
13.6.4 Baum-Welch (Forward-Backward) Algorithm . . . 433
13.7 Gaussian Mixture Models (GMM) . . . 442
13.7.1 Training . . . 444
13.7.2 Tractability of Models . . . 449
13.8 Practical Issues . . . 451
13.8.1 Smoothing . . . 451
13.8.2 Model Comparison . . . 453
13.8.3 Held-Out Estimation . . . 456
13.8.4 Deleted Estimation . . . 461
References . . . 462

14 Neural Networks . . . 465
14.1 Perceptron . . . 466
14.2 Feedforward Networks . . . 466
14.2.1 Auto Associative Neural Networks (AANN) . . . 469
14.2.2 Radial Basis Function Neural Networks (RBFNN) . . . 469
14.2.3 Training (Learning) Formulation . . . 470
14.2.4 Optimization Problem . . . 473
14.2.5 Global Solution . . . 474
14.3 Recurrent Neural Networks (RNN) . . . 476
14.4 Time-Delay Neural Networks (TDNNs) . . . 477
14.5 Hierarchical Mixtures of Experts (HME) . . . 479
14.6 Practical Issues . . . 479

15 Support Vector Machines 485
15.1 Risk Minimization 488
15.1.1 Empirical Risk Minimization 492
15.1.2 Capacity and Bounds on Risk 493
15.1.3 Structural Risk Minimization 493
15.2 The Two-Class Problem 494
15.2.1 Dual Representation 497
15.2.2 Soft Margin Classification 500
15.3 Kernel Mapping 503
15.3.1 The Kernel Trick 504
15.4 Positive Semi-Definite Kernels 506
15.4.1 Linear Kernel 506
15.4.2 Polynomial Kernel 506
15.4.3 Gaussian Radial Basis Function (GRBF) Kernel 507
15.4.4 Cosine Kernel 508
15.4.5 Fisher Kernel 508
15.4.6 GLDS Kernel 509
15.4.7 GMM-UBM Mean Interval (GUMI) Kernel 510
15.5 Non Positive Semi-Definite Kernels 511
15.5.1 Jeffreys Divergence Kernel 511
15.5.2 Fuzzy Hyperbolic Tangent (tanh) Kernel 512
15.5.3 Neural Network Kernel 513
15.6 Kernel Normalization 513
15.7 Kernel Principal Component Analysis (Kernel PCA) 514
15.8 Nuisance Attribute Projection (NAP) 516
15.9 The multiclass (Γ-Class) Problem 518
References 519

Part II Advanced Theory

16 Speaker Modeling 525
16.1 Individual Speaker Modeling 526
16.2 Background Models and Cohorts 527
16.2.1 Background Models 528
16.2.2 Cohorts 529
16.3 Pooling of Data and Speaker Independent Models 529
16.4 Speaker Adaptation 530
16.4.1 Factor Analysis (FA) 530
16.4.2 Joint Factor Analysis (JFA) 531
16.4.3 Total Factors (Total Variability) 532
16.5 Audio Segmentation 532
16.6 Model Quality Assessment 534
16.6.1 Enrollment Utterance Quality Control 534
16.6.2 Speaker Menagerie 536
References 538

17 Speaker Recognition 543
17.1 The Enrollment Task 543
17.2 The Verification Task 544
17.2.1 Text-Dependent 546
17.2.2 Text-Prompted 546
17.2.3 Knowledge-Based 548
17.3 The Identification Task 548
17.3.1 Closed-Set Identification 548
17.3.2 Open-Set Identification 549
17.4 Speaker Segmentation 549
17.5 Speaker and Event Classification 550
17.5.1 Gender and Age Classification (Identification) 551
17.5.2 Audio Classification 553
17.5.3 Multiple Codebooks 553
17.5.4 Farfield Speaker Recognition 553
17.5.5 Whispering Speaker Recognition 554
17.6 Speaker Diarization 554
17.6.1 Speaker Position and Orientation 555
References 555

18 Signal Enhancement and Compensation 561
18.1 Silence Detection, Voice Activity Detection (VAD) 561
18.2 Audio Volume Estimation 564
18.3 Echo Cancellation 564
18.4 Spectral Filtering and Cepstral Liftering 565
18.4.1 Cepstral Mean Normalization (Subtraction) – CMN (CMS) 567
18.4.2 Cepstral Mean and Variance Normalization (CMVN) 569
18.4.3 Cepstral Histogram Normalization (Histogram Equalization) 570
18.4.4 RelAtive SpecTrAl (RASTA) Filtering 571
18.4.5 Other Lifters 571
18.4.6 Vocal Tract Length Normalization (VTLN) 573
18.4.7 Other Normalization Techniques 576
18.4.8 Steady Tone Removal (Narrowband Noise Reduction) 579
18.4.9 Adaptive Wiener Filtering 580
18.5 Speaker Model Normalization 581
18.5.1 Z-Norm 581
18.5.2 T-Norm (Test Norm) 582
18.5.3 H-Norm 582
18.5.4 HT-Norm 582
18.5.5 AT-Norm 582
18.5.6 C-Norm 582
18.5.7 D-Norm 583
18.5.8 F-Norm (F-Ratio Normalization) 583
18.5.9 Group-Specific Normalization 583

18.5.10 Within Class Covariance Normalization (WCCN) 583
18.5.11 Other Normalization Techniques 583

24 Integral Transforms 647
24.1 Complex Variable Theory in Integral Transforms 648
24.1.1 Complex Variables 648
24.1.2 Limits 651
24.1.3 Continuity and Forms of Discontinuity 652
24.1.4 Convexity and Concavity of Functions 658
24.1.5 Odd, Even and Periodic Functions 661
24.1.6 Differentiation 663
24.1.7 Analyticity 665
24.1.8 Integration 672
24.1.9 Power Series Expansion of Functions 683
24.1.10 Residues 686
24.2 Relations Between Functions 688
24.2.1 Convolution 688
24.2.2 Correlation 689
24.3 Orthogonality of Functions 690
24.4 Integral Equations 694
24.5 Kernel Functions 696
24.5.1 Hilbert's Expansion Theorem 698
24.5.2 Eigenvalues and Eigenfunctions of the Kernel 700

24.6 Fourier Series Expansion . . . 708
24.6.1 Convergence of the Fourier Series . . . 713
24.6.2 Parseval's Theorem . . . 714
24.7 Wavelet Series Expansion . . . 716
24.8 The Laplace Transform . . . 717
24.8.1 Inversion . . . 720
24.8.2 Some Useful Transforms . . . 721
24.9 Complex Fourier Transform (Fourier Integral Transform) . . . 722
24.9.1 Translation . . . 724
24.9.2 Scaling . . . 724
24.9.3 Symmetry Table . . . 724
24.9.4 Time and Complex Scaling and Shifting . . . 725
24.9.5 Convolution . . . 725
24.9.6 Correlation . . . 726
24.9.7 Parseval's Theorem . . . 726
24.9.8 Power Spectral Density . . . 728
24.9.9 One-Sided Power Spectral Density . . . 728
24.9.10 PSD-per-unit-time . . . 729
24.9.11 Wiener-Khintchine Theorem . . . 729
24.10 Discrete Fourier Transform (DFT) . . . 731
24.10.1 Inverse Discrete Fourier Transform (IDFT) . . . 732
24.10.2 Periodicity . . . 734
24.10.3 Plancherel and Parseval's Theorem . . . 734
24.10.4 Power Spectral Density (PSD) Estimation . . . 735
24.10.5 Fast Fourier Transform (FFT) . . . 736
24.11 Discrete-Time Fourier Transform (DTFT) . . . 738
24.11.1 Power Spectral Density (PSD) Estimation . . . 739
24.12 Complex Short-Time Fourier Transform (STFT) . . . 740
24.12.1 Discrete-Time Short-Time Fourier Transform DTSTFT . . . 744
24.12.2 Discrete Short-Time Fourier Transform DSTFT . . . 746
24.13 Discrete Cosine Transform (DCT) . . . 748
24.13.1 Efficient DCT Computation . . . 749
24.14 The z-Transform . . . 750
24.14.1 Translation . . . 756
24.14.2 Scaling . . . 756
24.14.3 Shifting – Time Lag . . . 757
24.14.4 Shifting – Time Lead . . . 757
24.14.5 Complex Translation . . . 757
24.14.6 Initial Value Theorem . . . 758
24.14.7 Final Value Theorem . . . 758
24.14.8 Real Convolution Theorem . . . 759
24.14.9 Inversion . . . 760
24.15 Cepstrum . . . 762
References . . . 769

25 Nonlinear Optimization 773
25.1 Gradient-Based Optimization 775
25.1.1 The Steepest Descent Technique 775
25.1.2 Newton's Minimization Technique 777
25.1.3 Quasi-Newton or Large Step Gradient Techniques 779
25.1.4 Conjugate Gradient Methods 793
25.2 Gradient-Free Optimization 803
25.2.1 Search Methods 804
25.2.2 Gradient-Free Conjugate Direction Methods 804
25.3 The Line Search Sub-Problem 809
25.4 Practical Considerations 810
25.4.1 Large-Scale Optimization 810
25.4.2 Numerical Stability 813
25.4.3 Nonsmooth Optimization 814
25.5 Constrained Optimization 814
25.5.1 The Lagrangian and Lagrange Multipliers 817
25.5.2 Duality 831
25.6 Global Convergence 835
References 836

26 Standards 841
26.1 Standard Audio Formats 842
26.1.1 Linear PCM (Uniform PCM) 842
26.1.2 μ-Law PCM (PCMU) 843
26.1.3 *A*-Law (PCMA) 843
26.1.4 MP3 843
26.1.5 HE-AAC 844
26.1.6 OGG Vorbis 844
26.1.7 ADPCM (G.726) 845
26.1.8 GSM 845
26.1.9 CELP 847
26.1.10 DTMF 848
26.1.11 Others Audio Formats 848
26.2 Standard Audio Encapsulation Formats 849
26.2.1 WAV 849
26.2.2 SPHERE 850
26.2.3 Standard Audio Format Encapsulation (SAFE) 850
26.3 APIs and Protocols 854
26.3.1 SVAPI 855
26.3.2 BioAPI 855
26.3.3 VoiceXML 856
26.3.4 MRCP 857
26.3.5 Real-time Transport Protocol (RTP) 858
26.3.6 Extensible MultiModal Annotation (EMMA) 858
