

Contents

Part I Primary Producers in Marine Environments

1 Primary Producers in the Sea	3
1.1 Phytoplankton	4
1.2 Benthic producers.....	19
2 Production: The Formation of Organic Matter	35
2.1 Photosynthesis	35
2.2 Chemosynthesis	39
2.3 Measurement of producer biomass and primary production.....	43
2.4 Contributions by different marine primary producers.....	55
3 Controls of Primary Production	61
3.1 Light as a control of primary production	61
3.2 Uptake and availability of nutrients.....	75
3.3 Temperature effects on primary producers	110

Part II Consumers in Marine Environments

4 Population Dynamics in Consumers	117
4.1 Elements of mathematical description of growth of populations.....	117
4.2 Survival life tables	119
4.3 Fecundity life tables	123
4.4 Some properties of life table variables	125
4.5 Reproductive tactics.....	137
5 Competition for Resources Among Consumers	143
5.1 Population growth in environments with finite resources	143
5.2 The nature of competition.....	144
5.3 Density-dependent control of abundance	153

- 5.4 Density-dependent versus density-independent effects on abundance..... 155
- 5.5 Resource partitioning..... 162
- 5.6 Niche breadth and species packing 168
- 6 Use and Transfer of Organic Matter in Marine Food Webs..... 171**
 - 6.1 A revolution in understanding marine food webs 171
 - 6.2 Interactions of dissolved organic matter and marine organisms 177
 - 6.3 Interactive exchanges of organic matter among species 186
 - 6.4 Consumption of Particles..... 192
- 7 Consumption of Food Particles: Mechanics of Grazing and Predation 197**
 - 7.1 Functional response to prey density..... 198
 - 7.2 Numerical responses by predators to density of prey 216
 - 7.3 Developmental response to prey density 221
- 8 Food Selection and Capture by Consumers..... 225**
 - 8.1 Finding and capturing particulate food..... 225
 - 8.2 Factors affecting food selection by consumers..... 229
 - 8.3 Optimization in food selection by consumers 245
 - 8.4 Vulnerability and accessibility of food items 249
 - 8.5 The importance of alternate prey..... 254
 - 8.6 Predation and stability of prey populations..... 257
- 9 Processing and Uses of Consumed Energy 259**
 - 9.1 Flow of energy through consumers..... 259
 - 9.2 Assimilation 261
 - 9.3 Respiration 267
 - 9.4 Growth..... 274
 - 9.5 Production..... 289
 - 9.6 Energy budgets for populations..... 300
 - 9.7 Ecosystem energetics 303

Part III Structure and Dynamics of Marine Communities

- 10 Food Web Structure and Its Controls I..... 311**
 - 10.1 Defining food webs..... 311
 - 10.2 Controls of community structure: some history 317
 - 10.3 Top-down controls in food webs..... 320
 - 10.4 Summary of top-down impact of consumers in food webs..... 354
- 11 Food Web Structure and Its Controls II 357**
 - 11.1 Bottom-up controls of food webs..... 357
 - 11.2 Atmospheric and oceanographic forcing..... 357

11.3	Bottom-up trophic cascades.....	376
11.4	Interaction of top-down and bottom-up controls.....	381
11.5	Top-down and bottom-up controls in a changing world	387
12	Taxonomic Structure: Species Composition	395
12.1	Measurement of diversity	395
12.2	Species diversity and community stability.....	400
12.3	Factors affecting diversity.....	401
12.4	Need for new directions	402
13	Spatial Structure: Patchiness	407
13.1	Scales of patchiness	407
13.2	Description of spatial distributions	408
13.3	Sources of patchiness	414
13.4	Ecological consequences of patchiness	427
13.5	Upscaling issues in spatial ecology	430
14	Temporal Structure: Perturbation, Colonization, Succession	437
14.1	Seasonal and multiannual changes in communities.....	437
14.2	Colonization and succession.....	441
Part IV Functioning of Marine Ecosystems		
15	The Carbon Cycle 1: Production and Transformations of Organic Matter Under Aerobic Conditions	469
15.1	Inorganic carbon.....	469
15.2	The organic carbon cycle in aerobic environments	472
16	The Carbon Cycle 2: Reactions Under Reducing Conditions	505
16.1	Occurrence of low-oxygen conditions.....	505
16.2	Sources of organic matter in reducing environments	510
16.3	Consumption of organic matter by microbial meta- bolic processes	510
16.4	Vertical profiles of microbial metabolic processes.....	518
16.5	Interactive effects of plants and animals with micro- bial processes	521
16.6	Sequestration of carbon in anoxic sediments.....	523
17	Nutrient Cycles in Ecosystems	529
17.1	Phosphorus.....	529
17.2	Nitrogen.....	537
17.3	Sulfur.....	568
18	Changing Marine Ecosystems and Processes: Trajectories and Recovery.....	577
18.1	Drivers and effects	577

18.2	Likely time courses of global-scale driving variables.....	580
18.3	Trajectories of ecosystem change and recovery	589
19	Coda	595
