

Contents

Introduction	ix
1 Vector Fields and Integral Curves	1
1.1 First Definitions	1
1.2 Flows	2
1.3 Directional Derivatives	3
1.4 Level Surfaces	4
1.5 Bracket of Two Fields	5
1.6 Cauchy Problem and Method of Characteristics	5
1.7 Stopping Time	8
1.8 Straightening Out of a Field	8
1.9 Propagation of Regularity	9
1.10 Exercises	9
2 Operators and Systems in the Plane	13
2.1 Operators in the Plane: First Definitions	13
2.2 Systems in the Plane: First Definitions	15
2.3 Reducing an Operator to a System	16
2.4 Gronwall Lemma	18
2.5 Domains of Determination I (A priori Estimate)	19

2.6	Domains of Determination II (Existence)	21
2.7	Exercises	22
3	Nonlinear First Order Equations	27
3.1	Quasilinear Scalar Equations	27
3.2	Eikonal Equations	30
3.3	Exercises	35
3.4	Notes	40
4	Conservation Laws in One-Space Dimension	41
4.1	First Definitions and Examples	41
4.2	Examples of Singular Solutions	42
4.3	Simple Waves	44
4.4	Rarefaction Waves	46
4.5	Riemann Invariants	47
4.6	Shock Curves	48
4.7	Lax Conditions and Admissible Shocks	50
4.8	Contact Discontinuities	52
4.9	Riemann Problem	53
4.10	Viscosity and Entropy	54
4.10.1	Entropy	55
4.10.2	Limits of Viscosity Solutions	55
4.10.3	Application to the Case of a Shock	56
4.11	Exercises	58
4.12	Notes	62
5	The Wave Equation	65
5.1	Explicit Solutions	65
5.1.1	Fourier Analysis	66

5.1.2	Solutions as Spherical Means	67
5.1.3	Finite Speed of Propagation, Domains of Determination	68
5.1.4	Strong Huygens Principle	69
5.1.5	Asymptotic Behavior of Solutions	69
5.2	Geometry of The Wave Equation	70
5.2.1	Rotations and Scaling Vector Field	71
5.2.2	Hyperbolic Rotations and Lorentz Fields	74
5.2.3	Light Cones, Null Frames, and Good Derivatives	75
5.2.4	Klainerman's Inequality	77
5.3	Exercises	79
5.4	Notes	82
6	Energy Inequalities for the Wave Equation	83
6.1	Standard Inequality in a Strip	83
6.2	Improved Standard Inequality	86
6.3	Inequalities in a Domain	88
6.4	General Multipliers	90
6.5	Morawetz Inequality	92
6.6	KSS Inequality	94
6.7	Conformal Inequality	98
6.8	Exercises	102
6.9	Notes	110
7	Variable Coefficient Wave Equations and Systems	111
7.1	What is a Wave Equation?	111
7.2	Energy Inequality for the Wave Equation	112
7.3	Symmetric Systems	115
7.3.1	Definitions and Examples	115

7.3.2	Energy Inequality	117
7.4	Finite Speed of Propagation	118
7.5	Klainerman's Method	120
7.6	Existence of Smooth Solutions	123
7.7	Geometrical Optics	126
7.7.1	An Algebraic Computation	126
7.7.2	Formal and Actual Geometrical Optics	127
7.7.3	Parametrics for the Cauchy Problem	128
7.8	Exercises	130
7.9	Notes	135
Appendix		137
A.1	Ordinary Differential Equations	137
A.1.1	Cauchy Problem	137
A.1.2	Flows	140
A.1.3	Lower and Upper Fences	141
A.2	Submanifolds	141
A.2.1	First Definitions	141
A.2.2	Submanifolds Defined by Equations	142
A.2.3	Parametrized Surfaces	143
A.2.4	Graphs	144
A.2.5	Weaving	145
A.2.6	Stokes Formula	145
