	Preface to the 1st edition	v
	Preface to the 2nd edition	vii
	Notation and Symbols	xiii
	Introduction	1
1	Limit Theorems for Stopped Random Walks	9
	1.1 Introduction	9
	1.2 a.s. Convergence and Convergence in Probability	12
	1.3 Anscombe's Theorem	16
	1.4 Moment Convergence in the Strong Law and the Central Limit Theorem	18
	1.5 Moment Inequalities	21
	1.6 Uniform Integrability	30
	1.7 Moment Convergence	39
	1.8 The Stopping Summand	42
	1.9 The Law of the Iterated Logarithm	44
	1.10 Complete Convergence and Convergence Rates	45
	1.11 Problems	47
2	Renewal Processes and Random Walks	49
	2.1 Introduction	49
	2.2 Renewal Processes; Introductory Examples	50
	2.3 Renewal Processes; Definition and General Facts	51
	2.4 Renewal Theorems	54
	2.5 Limit Theorems	57
	2.6 The Residual Lifetime	61
	2.7 Further Results	64
	2.7.1	64

2.7.2	65
2.7.3	65
2.7.4	66
2.7.5	66
2.7.6	66
2.8	Random Walks; Introduction and Classifications.....	66
2.9	Ladder Variables.....	69
2.10	The Maximum and the Minimum of a Random Walk.....	71
2.11	Representation Formulas for the Maximum.....	72
2.12	Limit Theorems for the Maximum.....	74
3	Renewal Theory for Random Walks with Positive Drift.....	79
3.1	Introduction.....	79
3.2	Ladder Variables.....	82
3.3	Finiteness of Moments.....	83
3.4	The Strong Law of Large Numbers.....	88
3.5	The Central Limit Theorem.....	91
3.6	Renewal Theorems.....	93
3.7	Uniform Integrability.....	96
3.8	Moment Convergence.....	98
3.9	Further Results on $E\nu(t)$ and $\text{Var}\nu(t)$	100
3.10	The Overshoot.....	103
3.11	The Law of the Iterated Logarithm.....	108
3.12	Complete Convergence and Convergence Rates.....	109
3.13	Applications to the Simple Random Walk.....	109
3.14	Extensions to the Non-I.I.D. Case.....	112
3.15	Problems.....	112
4	Generalizations and Extensions.....	115
4.1	Introduction.....	115
4.2	A Stopped Two-Dimensional Random Walk.....	116
4.3	Some Applications.....	126
4.3.1	Chromatographic Methods.....	126
4.3.2	Motion of Water in a River.....	129
4.3.3	The Alternating Renewal Process.....	129
4.3.4	Cryptomachines.....	130
4.3.5	Age Replacement Policies.....	130
4.3.6	Age Replacement Policies; Cost Considerations.....	132
4.3.7	Random Replacement Policies.....	132
4.3.8	Counter Models.....	132
4.3.9	Insurance Risk Theory.....	133
4.3.10	The Queueing System M/G/1.....	134
4.3.11	The Waiting Time in a Roulette Game.....	134
4.3.12	A Curious (?) Problem.....	136
4.4	The Maximum of a Random Walk with Positive Drift.....	136

4.5	First Passage Times Across General Boundaries	141
5	Functional Limit Theorems	157
5.1	Introduction	157
5.2	An Anscombe–Donsker Invariance Principle	157
5.3	First Passage Times for Random Walks with Positive Drift . . .	162
5.4	A Stopped Two-Dimensional Random Walk	167
5.5	The Maximum of a Random Walk with Positive Drift	169
5.6	First Passage Times Across General Boundaries	170
5.7	The Law of the Iterated Logarithm	172
5.8	Further Results	174
6	Perturbed Random Walks	175
6.1	Introduction	175
6.2	Limit Theorems; the General Case	178
6.3	Limit Theorems; the Case $Z_n = n \cdot g(\bar{Y}_n)$	183
6.4	Convergence Rates	190
6.5	Finiteness of Moments; the General Case	190
6.6	Finiteness of Moments; the Case $Z_n = n \cdot g(\bar{Y}_n)$	194
6.7	Moment Convergence; the General Case	198
6.8	Moment Convergence; the Case $Z_n = n \cdot g(\bar{Y}_n)$	200
6.9	Examples	202
6.10	Stopped Two-Dimensional Perturbed Random Walks	205
6.11	The Case $Z_n = n \cdot g(\bar{Y}_n)$	209
6.12	An Application	211
6.13	Remarks on Further Results and Extensions	214
6.14	Problems	221
A	Some Facts from Probability Theory	223
A.1	Convergence of Moments. Uniform Integrability	223
A.2	Moment Inequalities for Martingales	225
A.3	Convergence of Probability Measures	229
A.4	Strong Invariance Principles	234
A.5	Problems	235
B	Some Facts about Regularly Varying Functions	237
B.1	Introduction and Definitions	237
B.2	Some Results	238
	References	241
	Index	257

Stopped Random Walks
Limit Theorems and Applications

Gut, A.

2009, XIV, 263 p., Hardcover

ISBN: 978-0-387-87834-8
