Preface to the Second Edition ........................................ ix
Preface to the First Edition ........................................ xi

1 Introduction .......................................................... 1
  1.1 Modeling by Stochastic Differential Equations ................. 1

2 Framework .......................................................... 13
  2.1 White Noise ..................................................... 13
    2.1.1 The 1-Dimensional, \( d \)-Parameter Smoothed White
          Noise ....................................................... 13
    2.1.2 The (Smoothed) White Noise Vector ...................... 20
  2.2 The Wiener–Itô Chaos Expansion ............................. 21
    2.2.1 Chaos Expansion in Terms of Hermite Polynomials ....... 21
    2.2.2 Chaos Expansion in Terms of Multiple Itô Integrals ... 29
  2.3 The Hida Stochastic Test Functions and Stochastic
       Distributions. The Kondratiev Spaces \((\mathcal{S})^m;N\), \((\mathcal{S})^{m;N}_{-\rho}\) ....... 31
    2.3.1 The Hida Test Function Space \((\mathcal{S})\) and the Hida
           Distribution Space \((\mathcal{S})^*\) .......................... 40
    2.3.2 Singular White Noise ..................................... 42
  2.4 The Wick Product .............................................. 43
    2.4.1 Some Examples and Counterexamples ..................... 47
  2.5 Wick Multiplication and Hitsuda/Skorohod Integration ...... 50
  2.6 The Hermite Transform ....................................... 61
  2.7 The \((\mathcal{S})^N_{\rho,r}\) Spaces and the \(S\)-Transform ......... 75
  2.8 The Topology of \((\mathcal{S})^{N}_{-1}\) ............................. 81
  2.9 The \(\mathcal{F}\)-Transform and the Wick Product on \(L^1(\mu)\) ...... 88
  2.10 The Wick Product and Translation .......................... 92
  2.11 Positivity ..................................................... 98
3 Applications to Stochastic Ordinary Differential Equations

3.1 Linear Equations

3.1.1 Linear 1-Dimensional Equations

3.1.2 Some Remarks on Numerical Simulations

3.1.3 Some Linear Multidimensional Equations

3.2 A Model for Population Growth in a Crowded, Stochastic Environment

3.2.1 The General \((S)\) Solution

3.2.2 A Solution in \(L^1(\mu)\)

3.2.3 A Comparison of Model A and Model B

3.3 A General Existence and Uniqueness Theorem

3.4 The Stochastic Volterra Equation

3.5 Wick Products Versus Ordinary Products: a Comparison Experiment

3.5.1 Variance Properties

3.6 Solution and Wick Approximation of Quasilinear SDE

3.7 Using White Noise Analysis to Solve General Nonlinear SDEs

4 Stochastic Partial Differential Equations Driven by Brownian White Noise

4.1 General Remarks

4.2 The Stochastic Poisson Equation

4.2.1 The Functional Process Approach

4.3 The Stochastic Transport Equation

4.3.1 Pollution in a Turbulent Medium

4.3.2 The Heat Equation with a Stochastic Potential

4.4 The Stochastic Schrödinger Equation

4.4.1 \(L^1(\mu)\)-Properties of the Solution

4.5 The Viscous Burgers Equation with a Stochastic Source

4.6 The Stochastic Pressure Equation

4.6.1 The Smoothed Positive Noise Case

4.6.2 An Inductive Approximation Procedure

4.6.3 The 1-Dimensional Case

4.6.4 The Singular Positive Noise Case

4.7 The Heat Equation in a Stochastic, Anisotropic Medium

4.8 A Class of Quasilinear Parabolic SPDEs

4.9 SPDEs Driven by Poissonian Noise

5 Stochastic Partial Differential Equations Driven by Lévy Processes

5.1 Introduction

5.2 The White Noise Probability Space of a Lévy Process \((d = 1)\)

5.3 White Noise Theory for a Lévy Process \((d = 1)\)
Stochastic Partial Differential Equations
A Modeling, White Noise Functional Approach
Holden, H.; Øksendal, B.; Ubøe, J.; Zhang, T.
