Table of Contents

CONTENTS, VOLUME II

Preface to the Third Edition vii
Preface to the First Edition xi

1. Multi-Species Waves and Practical Applications 1
   1.1 Intuitive Expectations ........................................ 1
   1.2 Waves of Pursuit and Evasion in Predator–Prey Systems .... 5
   1.3 Competition Model for the Spatial Spread of the Grey Squirrel in Britain ........................................... 12
   1.4 Spread of Genetically Engineered Organisms ................. 18
   1.5 Travelling Fronts in the Belousov–Zhabotinskii Reaction .... 35
   1.6 Waves in Excitable Media ..................................... 41
   1.7 Travelling Wave Trains in Reaction Diffusion Systems with Oscillatory Kinetics ..................................... 49
   1.8 Spiral Waves .................................................... 54
   1.9 Spiral Wave Solutions of $\lambda-\omega$ Reaction Diffusion Systems ................................................. 61
Exercises ..................................................................... 67

2. Spatial Pattern Formation with Reaction Diffusion Systems 71
   2.1 Role of Pattern in Biology ...................................... 71
   2.2 Reaction Diffusion (Turing) Mechanisms ...................... 75
   2.3 General Conditions for Diffusion-Driven Instability:
       Linear Stability Analysis and Evolution of Spatial Pattern . 82
   2.4 Detailed Analysis of Pattern Initiation in a Reaction Diffusion
       Mechanism ................................................................ 90
   2.5 Dispersion Relation, Turing Space, Scale and Geometry Effects
       in Pattern Formation Models ...................................... 103
   2.6 Mode Selection and the Dispersion Relation .................. 113
   2.7 Pattern Generation with Single-Species Models: Spatial
       Heterogeneity with the Spruce Budworm Model .............. 120

Table of Contents (continued)

CONTENTS, VOLUME I

J.D. Murray: *Mathematical Biology, I: An Introduction*

Preface to the Third Edition vii

Preface to the First Edition xi

1. **Continuous Population Models for Single Species**
   1.1 Continuous Growth Models 1
   1.2 Insect Outbreak Model: Spruce Budworm 7
   1.3 Delay Models 13
   1.4 Linear Analysis of Delay Population Models: Periodic Solutions 17
   1.5 Delay Models in Physiology: Periodic Dynamic Diseases 21
   1.6 Harvesting a Single Natural Population 30
   1.7 Population Model with Age Distribution 36
   Exercises 40

2. **Discrete Population Models for a Single Species**
   2.1 Introduction: Simple Models 44
   2.2 Cobwebbing: A Graphical Procedure of Solution 49
   2.3 Discrete Logistic-Type Model: Chaos 53
   2.4 Stability, Periodic Solutions and Bifurcations 59
   2.5 Discrete Delay Models 62
   2.6 Fishery Management Model 67
   2.7 Ecological Implications and Caveats 69
   2.8 Tumour Cell Growth 72
   Exercises 75

3. **Models for Interacting Populations**
   3.1 Predator–Prey Models: Lotka–Volterra Systems 79
   3.2 Complexity and Stability 83
<table>

## Contents, Volume I

**7.3 Oscillators and Switches with Two or More Species:**
General Qualitative Results ........................................ 226  
**7.4 Simple Two-Species Oscillators: Parameter Domain**
Determination for Oscillations ....................................... 234  
**7.5 Hodgkin–Huxley Theory of Nerve Membranes:**
FitzHugh–Nagumo Model ............................................. 239  
**7.6 Modelling the Control of Testosterone Secretion and**
Chemical Castration ................................................... 244  
Exercises ........................................................................ 253

### 8. BZ Oscillating Reactions 257
**8.1 Belousov Reaction and the Field–Körös–Noyes (FKN) Model** ..... 257  
**8.2 Linear Stability Analysis of the FKN Model and Existence**
of Limit Cycle Solutions ................................................ 261  
**8.3 Nonlocal Stability of the FKN Model** ............................ 265  
**8.4 Relaxation Oscillators: Approximation for the**
Belousov–Zhabotinskii Reaction ...................................... 268  
**8.5 Analysis of a Relaxation Model for Limit Cycle Oscillations**
in the Belousov–Zhabotinskii Reaction ............................ 271  
Exercises ........................................................................ 277

### 9. Perturbed and Coupled Oscillators and Black Holes 278
**9.1 Phase Resetting in Oscillators** .................................. 278  
**9.2 Phase Resetting Curves** ........................................... 282  
**9.3 Black Holes** .............................................................. 286  
**9.4 Black Holes in Real Biological Oscillators** .................... 288  
**9.5 Coupled Oscillators: Motivation and Model System** ........... 293  
**9.6 Phase Locking of Oscillations: Synchronisation in Fireflies** ..... 295  
**9.7 Singular Perturbation Analysis: Preliminary Transformation** ... 299  
**9.8 Singular Perturbation Analysis: Transformed System** ......... 302  
**9.9 Singular Perturbation Analysis: Two-Time Expansion** .......... 305  
**9.10 Analysis of the Phase Shift Equation and Application**
to Coupled Belousov–Zhabotinskii Reactions ....................... 310  
Exercises ........................................................................ 313

### 10. Dynamics of Infectious Diseases 315
**10.1 Historical Aside on Epidemics** .................................. 315  
**10.2 Simple Epidemic Models and Practical Applications** .......... 319  
**10.3 Modelling Venera] Diseases** ...................................... 327  
**10.4 Multi-Group Model for Gonorrhea and Its Control** ............ 331  
**10.5 AIDS: Modelling the Transmission Dynamics of the Human**
Immunodeficiency Virus (HIV) .......................................... 333  
**10.6 HIV: Modelling Combination Drug Therapy** .................... 341  
**10.7 Delay Model for HIV Infection with Drug Therapy** .......... 350  
**10.8 Modelling the Population Dynamics of Acquired Immunity to**
Parasite Infection ......................................................... 351
### 10.9 Age-Dependent Epidemic Model and Threshold Criterion

- Page 361

### 10.10 Simple Drug Use Epidemic Model and Threshold Analysis

- Page 365

### 10.11 Bovine Tuberculosis Infection in Badgers and Cattle

- Page 369

### 10.12 Modelling Control Strategies for Bovine Tuberculosis in Badgers and Cattle

- Page 379

### Exercises

- Page 393

---

### 11. Reaction Diffusion, Chemotaxis, and Nonlocal Mechanisms

- Page 395

#### 11.1 Simple Random Walk and Derivation of the Diffusion Equation

- Page 395

#### 11.2 Reaction Diffusion Equations

- Page 399

#### 11.3 Models for Animal Dispersal

- Page 402

#### 11.4 Chemotaxis

- Page 405

#### 11.5 Nonlocal Effects and Long Range Diffusion

- Page 408

#### 11.6 Cell Potential and Energy Approach to Diffusion and Long Range Effects

- Page 413

### Exercises

- Page 416

---

### 12. Oscillator-Generated Wave Phenomena

- Page 418

#### 12.1 Belousov–Zhabotinskii Reaction Kinematic Waves

- Page 418

#### 12.2 Central Pattern Generator: Experimental Facts in the Swimming of Fish

- Page 422

#### 12.3 Mathematical Model for the Central Pattern Generator

- Page 424

#### 12.4 Analysis of the Phase Coupled Model System

- Page 431

### Exercises

- Page 436

---

### 13. Biological Waves: Single-Species Models

- Page 437

#### 13.1 Background and the Travelling Waveform

- Page 437

#### 13.2 Fisher–Kolmogoroff Equation and Propagating Wave Solutions

- Page 439

#### 13.3 Asymptotic Solution and Stability of Wavefront Solutions of the Fisher–Kolmogoroff Equation

- Page 444

#### 13.4 Density-Dependent Diffusion-Reaction Diffusion Models and Some Exact Solutions

- Page 449

#### 13.5 Waves in Models with Multi-Steady State Kinetics: Spread and Control of an Insect Population

- Page 460

#### 13.6 Calcium Waves on Amphibian Eggs: Activation Waves on *Medaka* Eggs

- Page 467

#### 13.7 Invasion Wavespeeds with Dispersive Variability

- Page 471

#### 13.8 Species Invasion and Range Expansion

- Page 478

### Exercises

- Page 482

---

### 14. Use and Abuse of Fractals

- Page 484

#### 14.1 Fractals: Basic Concepts and Biological Relevance

- Page 484

#### 14.2 Examples of Fractals and Their Generation

- Page 487

#### 14.3 Fractal Dimension: Concepts and Methods of Calculation

- Page 490

#### 14.4 Fractals or Space-Filling?

- Page 496
Appendices

A. Phase Plane Analysis

B. Routh-Hurwitz Conditions, Jury Conditions, Descartes’ Rule of Signs, and Exact Solutions of a Cubic
   B.1 Polynomials and Conditions ........................................... 507
   B.2 Descartes’ Rule of Signs .............................................. 509
   B.3 Roots of a General Cubic Polynomial .............................. 510
