I  Review of Probability and Distribution Theory  

1  Probability and Random Variables  
1.1  Introduction  
1.2  Univariate Discrete Distributions  
   1.2.1  The Bernoulli and Binomial Distributions  
   1.2.2  The Poisson Distribution  
   1.2.3  Binomial Distribution: Normal Approximation  
1.3  Univariate Continuous Distributions  
   1.3.1  The Uniform, Beta, Gamma, Normal, and Student-t Distributions  
1.4  Multivariate Probability Distributions  
   1.4.1  The Multinomial Distribution  
   1.4.2  The Dirichlet Distribution  
   1.4.3  The d-Dimensional Uniform Distribution  
   1.4.4  The Multivariate Normal Distribution  
   1.4.5  The Chi-square Distribution  
   1.4.6  The Wishart and Inverse Wishart Distributions  
   1.4.7  The Multivariate-t Distribution  
1.5  Distributions with Constrained Sample Space  
1.6  Iterated Expectations
2 Functions of Random Variables 77
   2.1 Introduction ........................................ 77
   2.2 Functions of a Single Random Variable ............ 78
      2.2.1 Discrete Random Variables ..................... 78
      2.2.2 Continuous Random Variables ................. 79
      2.2.3 Approximating the Mean and Variance ......... 89
      2.2.4 Delta Method .................................. 93
   2.3 Functions of Several Random Variables .......... 95
      2.3.1 Linear Transformations .......................... 111
      2.3.2 Approximating the Mean and Covariance Matrix . 114

II Methods of Inference 117

3 An Introduction to Likelihood Inference 119
   3.1 Introduction .......................................... 119
   3.2 The Likelihood Function ............................. 120
   3.3 The Maximum Likelihood Estimator ................. 122
   3.4 Likelihood Inference in a Gaussian Model ......... 125
   3.5 Fisher’s Information Measure ....................... 128
      3.5.1 Single Parameter Case .......................... 128
      3.5.2 Alternative Representation of Information .... 131
      3.5.3 Mean and Variance of the Score Function .... 134
      3.5.4 Multiparameter Case ............................ 135
      3.5.5 Cramér–Rao Lower Bound ....................... 138
   3.6 Sufficiency .......................................... 142
   3.7 Asymptotic Properties: Single Parameter Models .... 143
      3.7.1 Probability of the Data Given the Parameter .... 144
      3.7.2 Consistency .................................... 146
      3.7.3 Asymptotic Normality and Efficiency .......... 147
   3.8 Asymptotic Properties: Multiparameter Models ..... 152
   3.9 Functional Invariance ............................... 153
      3.9.1 Illustration of Functional Invariance .......... 153
      3.9.2 Invariance in a Single Parameter Model ....... 157
      3.9.3 Invariance in a Multiparameter Model ......... 159

4 Further Topics in Likelihood Inference 161
   4.1 Introduction .......................................... 161
   4.2 Computation of Maximum Likelihood Estimates ..... 162
   4.3 Evaluation of Hypotheses ............................. 166
      4.3.1 Likelihood Ratio Tests .......................... 166
      4.3.2 Confidence Regions ............................... 177
      4.3.3 Wald’s Test ..................................... 179
      4.3.4 Score Test ...................................... 179
   4.4 Nuisance Parameters ................................. 181

### Contents

III Markov Chain Monte Carlo Methods 475

10 An Overview of Discrete Markov Chains 477
10.1 Introduction 477
10.2 Definitions 478
10.3 State of the System after $n$-Steps 479
10.4 Long-Term Behavior of the Markov Chain 481
10.5 Stationary Distribution 481
10.6 Aperiodicity and Irreducibility 483
10.7 Reversible Markov Chains 487
10.8 Limiting Behavior 492

11 Markov Chain Monte Carlo 497
11.1 Introduction 497
11.2 Preliminaries
11.2.1 Notation 498
11.2.2 Transition Kernels 499
11.2.3 Varying Dimensionality 499
11.3 An Overview of Markov Chain Monte Carlo 500
11.4 The Metropolis–Hastings Algorithm
11.4.1 An Informal Derivation 502
11.4.2 A More Formal Derivation 504
11.5 The Gibbs Sampler
11.5.1 Fully Conditional Posterior Distributions 510
11.5.2 The Gibbs Sampling Algorithm 510
11.6 Langevin–Hastings Algorithm 517
11.7 Reversible Jump MCMC
11.7.1 The Invariant Distribution 518
11.7.2 Generating the Proposal 519
11.7.3 Specifying the Reversibility Condition 520
11.7.4 Derivation of the Acceptance Probability 522
11.7.5 Deterministic Proposals 523
11.7.6 Generating Proposals via the Identity Mapping 525
11.8 Data Augmentation 532

12 Implementation and Analysis of MCMC Samples 539
12.1 Introduction 539
12.2 A Single Long Chain or Several Short Chains? 540
12.3 Convergence Issues
12.3.1 Effect of Posterior Correlation on Convergence 541
12.3.2 Monitoring Convergence 547
12.4 Inferences from the MCMC Output
12.4.1 Estimators of Posterior Quantities 550
12.4.2 Monte Carlo Variance 553
12.5 Sensitivity Analysis 556
IV  Applications in Quantitative Genetics  561

13  Gaussian and Thick-Tailed Linear Models  563
   13.1  Introduction .......................... 563
   13.2  The Univariate Linear Additive Genetic Model  564
      13.2.1  A Gibbs Sampling Algorithm ........... 566
   13.3  Additive Genetic Model with Maternal Effects  570
      13.3.1  Fully Conditional Posterior Distributions .... 575
   13.4  The Multivariate Linear Additive Genetic Model  576
      13.4.1  Fully Conditional Posterior Distributions .... 580
   13.5  A Blocked Gibbs Sampler for Gaussian Linear Models . 584
   13.6  Linear Models with Thick-Tailed Distributions .... 588
      13.6.1  Motivation ........................... 588
      13.6.2  A Student-t Mixed Effects Model .......... 595
      13.6.3  Model with Clustered Random Effects .......... 600
   13.7  Parameterizations and the Gibbs Sampler .......... 602

14  Threshold Models for Categorical Responses  605
   14.1  Introduction .......................... 605
   14.2  Analysis of a Single Polychotomous Trait ....... 607
      14.2.1  Sampling Model ....................... 607
      14.2.2  Prior Distribution and Joint Posterior Density .. 608
      14.2.3  Fully Conditional Posterior Distributions .... 611
      14.2.4  The Gibbs Sampler ..................... 615
   14.3  Analysis of a Categorical and a Gaussian Trait .... 615
      14.3.1  Sampling Model ....................... 616
      14.3.2  Prior Distribution and Joint Posterior Density .. 617
      14.3.3  Fully Conditional Posterior Distributions .... 619
      14.3.4  The Gibbs Sampler ..................... 625
      14.3.5  Implementation with Binary Traits .......... 626

15  Bayesian Analysis of Longitudinal Data  627
   15.1  Introduction .......................... 627
   15.2  Hierarchical or Multistage Models ............... 628
      15.2.1  First Stage .......................... 629
      15.2.2  Second Stage .......................... 634
      15.2.3  Third Stage ........................... 639
      15.2.4  Joint Posterior Distribution ............... 641
   15.3  Two-Step Approximate Bayesian Analysis .......... 642
      15.3.1  Estimating Location Parameters ............. 643
      15.3.2  Estimating Dispersion Parameters ............ 650
      15.3.3  Special Case: Linear First Stage ............ 652
   15.4  Computation via Markov Chain Monte Carlo ......... 653
      15.4.1  Fully Conditional Posterior Distributions .... 655
   15.5  Analysis with Thick-Tailed Distributions .......... 664
16 Segregation and Quantitative Trait Loci Analysis 671
16.1 Introduction 671
16.2 Segregation Analysis Models 672
   16.2.1 Notation and Model 672
   16.2.2 Fully Conditional Posterior Distributions 675
   16.2.3 Some Implementation Issues 677
16.3 QTL Models 679
   16.3.1 Models with a Single QTL 680
   16.3.2 Models with an Arbitrary Number of QTL 690
