Preface	XVII
William Q. Meeker – Career and Accomplishments	XIX
List of Contributors	XXIX
List of Tables	XXXIII
List of Figures	XXXV

Part I Review, Tutorials, and Perspective

1 Trends in the Statistical Assessment of Reliability

<i>William Q. Meeker</i>	3
1.1 Background and Purpose	3
1.2 Traditional Reliability Data and Data Analysis	4
1.3 Product Design and Reliability Budgeting	5
1.4 Accelerated Testing	6
1.5 Multiple Failure Modes	6
1.6 Field and Warranty Data	8
1.7 Degradation Reliability Data	8
1.8 Recurrence Data	9
1.9 The Next Generation of Reliability Data	10
1.10 Software for Statistical Analysis of Reliability Data	11
1.11 Use of Bayesian Methods in Reliability	12
1.12 Concluding Remarks	14
References	14

2 Degradation Processes: An Overview

<i>Mohamed Abdel-Hameed</i>	17
2.1 Introduction	17
2.2 Lévy and Pure Jump Processes	18
2.2.1 Lévy processes	18
2.2.2 Pure jump Markov processes	20
2.3 Life Distributions and Dependence Between Random Variables	20
2.3.1 Classes of life distributions	20
2.3.2 Dependence between random variables	21

2.4	The Degradation Process and Properties of the Resulting Life Distribution	21
2.4.1	Non-stationary gamma degradation process	21
2.4.2	Increasing Lévy and pure jump degradation processes	22
2.4.3	Brownian motion like degradation processes	22
2.5	Maintenance Policies of Devices Subject to Degradation	23
	References	24

3 Defect Initiation, Growth, and Failure – A General Statistical Model and Data Analyses

	<i>Wayne B. Nelson</i>	27
3.1	Introduction	27
3.2	An Application	28
3.3	A Population Model for Defect Initiation and Growth	30
3.4	Model Fitting by Computer	34
	References	37

4 Properties of Lifetime Estimators Based on Warranty Data Consisting only of Failures

	<i>Kazuyuki Suzuki, Watalu Yamamoto, Takashi Hara, and Md. Mesbahul Alam</i>	39
4.1	Introduction	39
4.2	A Model for Failure Data in Warranty Database	41
4.3	Maximum Likelihood Estimation	42
4.4	Properties of Maximum Likelihood Estimators	44
4.4.1	Fisher information matrix	44
4.4.2	One failure mode case	44
4.4.3	Two failure modes case	44
4.5	Effect of Sales Amount on Precision	46
4.6	Conclusion	48
A	Gradients and Hessians of Log-Likelihood (4.3)	48
A.1	Gradients	49
A.2	Hessians	49
B	Expectation of the Elements of Hessians	51
C	Gauss–Hermite Quadrature	54
	References	55

Part II Shock Models

5 Shock Models

	<i>Allan Gut and Jürg Hüsler</i>	59
5.1	Introduction	59
5.2	Cumulative Shock Models	60
5.3	Extreme Shock Models	60
5.4	Mixed Shock Models	61
5.4.1	An auxiliary result	62
5.4.2	Some examples	63
5.5	More Realistic Model	63
5.5.1	Delayed sums	64

5.5.2 A generalized cumulative shock model 65

5.5.3 A generalized extreme shock model 66

5.5.4 A generalized mixed shock model 68

5.5.5 Extreme shock models with varying threshold 69

5.5.6 The exact distribution of ν 70

5.5.7 The asymptotic distribution 71

5.6 An Extension to Markovian Shock Models 73

5.6.1 Cumulative shock models 74

5.6.2 Extreme shock models 74

5.6.3 Mixed shock models 75

References 75

6 Parametric Shock Models

Waltraud Kahle and Heide Wendt 77

6.1 Introduction 77

6.2 Modeling Degradation by Marked Point Processes 78

6.3 Characteristics of the Degradation Process 82

6.3.1 The counting process $(\Phi(t))$ 82

6.3.2 The sequence (X_n) and the degradation process (Z_t) 83

6.3.3 The cumulative degradation at time t 84

6.3.4 The first passage time Z^h 88

6.4 Maximum Likelihood Estimations 90

6.5 The Large Sample Case 97

6.6 Moment Estimates 99

6.7 Comparison of Maximum Likelihood and Moment Estimates 101

6.8 Conclusion 103

References 103

7 Poisson Approximation of Processes with Locally Independent Increments and Semi-Markov Switching – Toward Application in Reliability

V.S. Koroliuk, N. Limnios, and I.V. Samoilenko 105

7.1 Introduction 105

7.2 Main Results 107

7.3 Proof of Theorem 1 110

References 115

8 On Some Shock Models of Degradation

Maxim Finkelstein and Ji Hwan Cha 117

8.1 Introduction 117

8.2 Asymptotic Properties for Two Special Shock Models 119

8.3 Terminating and “Accumulating” Shocks 121

8.4 Concluding Remarks 124

References 124

Part III Degradation Models

9 The Wiener Process as a Degradation Model: Modeling and Parameter Estimation

<i>Waltraud Kahle and Axel Lehmann</i>	127
9.1 Introduction.....	127
9.2 Increments of the Degradation Process Are Observed.....	129
9.3 Observation of Failure Times.....	134
9.4 Observation of Both Degradation Increments and Failure Times....	135
9.5 An Example.....	141
9.6 Simulation Study.....	144
References.....	145

10 On the General Degradation Path Model: Review and Simulation

<i>Firoozeh Haghighi, Nazanin Noorae, and Narges Nazeri Rad</i>	147
10.1 Introduction.....	147
10.2 Degradation Model.....	148
10.2.1 Degradation model with noise.....	149
10.2.2 Degradation model without measurement error.....	150
10.3 Simulation.....	151
References.....	154

11 A Closer Look at Degradation Models: Classical and Bayesian Approaches

<i>Marta A. Freitas, Thiago R. dos Santos, Magda C. Pires, and Enrico A. Colosimo</i>	157
11.1 Introduction.....	157
11.1.1 Background and literature.....	157
11.1.2 The problem.....	159
11.2 Train Wheel Degradation Data.....	161
11.3 Statistical Methods for Degradation Data Analysis.....	162
11.3.1 Methods based on “classical” inference.....	162
11.3.2 Bayesian inference.....	166
11.4 The Wheel Degradation Data Revisited.....	167
11.4.1 Estimation of $F_T(t)$ using the approximate method.....	168
11.4.2 Estimation of $F_T(t)$ using the analytical method.....	170
11.4.3 Estimation of $F_T(t)$ using the two-stage method.....	171
11.4.4 Estimation of $F_T(t)$ using the numerical method.....	172
11.4.5 Comparison of the results generated by the methods based on “classical” inference.....	172
11.4.6 Bayesian inference.....	172
11.5 Conclusions.....	177
References.....	178

12 Optimal Prophylaxis Policy Under Non-monotone Degradation
S.S. Rasova and B.P. Harlamov 181

12.1 Setting of the Problem 181

12.2 Optimization Problem 183

12.3 Trajectories of Choice 184

12.4 Degradation Process of Diffusion Type 192

References 194

13 Deterioration Processes with Increasing Thresholds
S. Zacks 195

13.1 Introduction 195

13.2 Preliminaries 196

13.3 The Reliability and Hazard in Case I 197

13.4 The Reliability and Hazard in Case II 199

13.5 Reliability and Hazard in Case III 200

13.6 Reliability and Hazard in Case IV 201

13.7 Exponential Deterioration 202

 13.7.1 Case I with $K = 1$ 202

 13.7.2 Case I with $K = 2$ 203

 13.7.3 Case II with $K = 1$ 204

 13.7.4 Case III, $K = 1$ 206

 13.7.5 Case IV: Linear threshold 207

References 208

14 Failure Time Models Based on Degradation Processes
Axel Lehmann 209

14.1 Introduction 209

 14.1.1 Models for degradation data 210

 14.1.2 Models relating degradation and failure 213

14.2 Degradation–Threshold–Shock Models 214

 14.2.1 The general model 214

 14.2.2 Degradation–threshold models 216

 14.2.3 Degradation–shock models 217

 14.2.4 Likelihood function 218

 14.2.5 Estimation of the survival function and the failure rate of T .. 222

14.3 DTS Models with Covariates 222

 14.3.1 Maximum likelihood estimation 225

 14.3.2 Semiparametric estimation 227

14.4 A DTS Model for Repairable Items 229

14.5 Application of DTS Models 230

References 231

15 Degradation and Fuzzy Information
R. Viertl 235

15.1 Introduction 235

15.2 Material Degradation 236

15.3 Fuzzy Initial Conditions 237

15.4 Fuzzy Distribution of $q(0)$ 238

15.5	Application to Accelerated Life Testing	240
	References	240

16 A New Perspective on Damage Accumulation, Marker Processes, and Weibull’s Distribution

	<i>Nozer D. Singpurwalla</i>	241
16.1	The Hazard Potential	242
16.2	A Stochastic Process Model for Damage and Its Markers	243
16.3	Introduction	244
16.4	The Weibull Distribution in Material Failure: Some History	244
16.5	Preliminaries and Notation	244
16.6	The Weakest Link Principle and an Application	245
16.7	Weibull’s Approximation and Analysis	246
16.8	Critique of Weibull’s Analysis	247
16.9	The Theory of Extreme Values	248
16.10	Comments on Using the Weibull Distribution Motivated via WLP and EVT	248
	References	249

Part IV Reliability Estimation and ALT

17 Reliability Estimation of Mechanical Components Using Accelerated Life Testing Models

	<i>Fabrice Guérin, M. Barreau, A. Charki, A. Todoskoff, S. Cloupet and D. Bigaud</i>	253
17.1	Introduction	253
17.2	Accelerated Life Testing Model	254
17.3	Regression Test Plan	256
	17.3.1 Introduction	256
	17.3.2 Parametric ALT model	257
	17.3.3 Generalized proportional hazard (GPH) model	257
	17.3.4 Semi-parametric ALT model	259
	17.3.5 Application to ball bearings	260
17.4	Reliability Test With Previous Accelerated Damage	266
	17.4.1 Principle	266
	17.4.2 Test plan definition	267
	17.4.3 Parametric model	268
	17.4.4 Nonparametric model	269
	17.4.5 Simulation example	270
17.5	Conclusions	272
	References	273

18 Reliability Estimation from Failure-Degradation Data with Covariates

	<i>V. Bagdonavičius, I. Masiulaitytė, M.S. Nikulin</i>	275
18.1	Introduction	275
18.2	Modelling Simultaneous Traumatic Events and Degradation Data Under Covariates	276

18.3 Estimation of Model Parameters 280
 18.3.1 The data 280
 18.3.2 Likelihood function construction 280
 18.3.3 Example 1: Time-scaled gamma process 281
 18.3.4 Example 2: Shock processes 284
 18.3.5 Example 3: Path models 286
 18.3.6 Modified loglikelihood 288
 18.4 Estimation of Reliability Characteristics 288
 References 289

19 Asymptotic Properties of Redundant Systems Reliability Estimators

V. Bagdonavičius, I. Masiulaitytė, M.S. Nikulin 293
 19.1 Introduction 293
 19.2 Point Estimators of the c.d.f. of Redundant Systems 294
 19.2.1 Nonparametric estimation 294
 19.2.2 Parametric estimation 296
 19.3 Asymptotic Distribution of \hat{K}_j and Confidence Intervals for $K_j(t)$ 296
 19.3.1 Nonparametric case 297
 19.3.2 Parametric case 302
 19.4 Power of Goodness-of-Fit Tests 306
 References 310

20 An Approach to System Reliability Demonstration Based on Accelerated Test Results on Components

Léo Gerville-Réache and Vincent Couallier 311
 20.1 Introduction 311
 20.2 Global Reliability Demonstration from k “Zero-Failure” Component Testing Procedures 313
 20.2.1 Equal component test times 314
 20.2.2 Equal reliability targets 314
 20.2.3 Integrating failed demonstration procedures 315
 20.3 Designing a Global Demonstration Test for the Reliability of a Series System Under a Success Probability Constraint 316
 20.3.1 Basic principle of the demonstration test planning 316
 20.3.2 “ n/j failures” demonstration test 318
 20.4 Conclusion 319
 References 319

Part V Survival Function Estimation

21 Robust Versus Nonparametric Approaches and Survival Data Analysis

Catherine Huber 323
 21.1 Introduction 324
 21.2 Motivation for Robustness 324
 21.2.1 Instability of usual tests and estimators 324
 21.2.2 Sensitivity of rank test 327

21.3	Robustness Concepts	328
21.3.1	Robust versus nonparametric approach	328
21.3.2	Regularity of the parametric model	329
21.3.3	Extension of the underlying model	330
21.3.4	Measures of robustness	330
21.4	Robustness in Survival Analysis	331
21.4.1	Measure of robustness of Kaplan–Meier estimator	331
21.4.2	Perspectives	336
	References	336

22 Modelling Recurrent Events for Repairable Systems Under Worse Than Old Assumption

	<i>G. Babykina and V. Couallier</i>	339
22.1	Introduction	339
22.2	A New Model of Imperfect Repair: The LEYP Model	342
22.2.1	Some useful properties	344
22.3	Taking Covariates into Account	345
22.4	Statistical Estimation and Data Description	345
22.5	Numerical Example	347
22.5.1	Data description	347
22.5.2	Parameter estimation	350
22.5.3	Predictions	352
22.6	Conclusion	353
	References	353

23 Survival Models for Step-Stress Experiments With Lagged Effects

	<i>N. Kannan, D. Kundu, and N. Balakrishnan</i>	355
23.1	Introduction	355
23.2	Model Description	357
23.2.1	Step-stress models with latency	357
23.3	Maximum Likelihood Estimators for the CRM	358
23.4	Least Squares Estimators	360
23.5	Data Analysis	361
23.6	Simulation Results	362
23.7	Conclusions	367
	References	368

24 Estimation of Density on Censored Data

	<i>V. Solev</i>	371
24.1	Introduction	371
24.2	Approximating of Parametric Set	374
24.3	Hellinger Distance	376
24.4	Main Result	378
	References	379

Part VI Competing Risk and Chaotic Systems

25 Toward a Test for Departure of a Trajectory from a Neighborhood of a Chaotic System

<i>M. Lu Valle</i>	383
25.1 Introduction	383
25.1.1 Terminology and the Lorenz attractor	385
25.1.2 The alternative for the simulation	386
25.2 The Test Statistic and Supporting Theory	387
25.3 Computer Experiments	391
25.3.1 Description of the computer experiments	392
25.4 Directions for Future Work	394
References	394

26 Probability Plotting with Independent Competing Risks

<i>Francis G. Pascual and Christopher Gast</i>	397
26.1 Introduction	397
26.1.1 Competing risks	397
26.1.2 Probability plotting	398
26.1.3 Outline	399
26.2 Notation and Model Assumptions	399
26.2.1 Distributions of individual risks	399
26.2.2 Distribution of subject lifetime	400
26.2.3 The likelihood function	400
26.3 The Kaplan–Meier Estimator And Probability Plotting	401
26.3.1 Kaplan–Meier estimator	401
26.3.2 Linearizing the Cdf under one risk	402
26.3.3 Probability plotting and competing risks	402
26.4 Proposed Method	403
26.5 Applications	404
26.5.1 Breast cancer study	404
26.5.2 Shock absorber failure data	407
26.5.3 Simulated data set	410
26.6 Conclusions	412
References	413
