Preface to the Second Edition	V
--------------------------------------------	---

Preface to the First Edition	VII
-------------------------------------------	-----

Part I Theory of Stochastic Processes

1 Fundamentals of Probability	3
1.1 Probability and Conditional Probability	3
1.2 Random Variables and Distributions	9
1.2.1 Random Vectors	14
1.3 Independence	17
1.4 Expectations	20
1.5 Gaussian Random Vectors	30
1.6 Conditional Expectations	33
1.7 Conditional and Joint Distributions	41
1.8 Convergence of Random Variables	48
1.9 Infinitely Divisible Distributions	57
1.9.1 Examples	64
1.10 Stable Laws	65
1.10.1 Martingales	68
1.11 Exercises and Additions	71
2 Stochastic Processes	77
2.1 Definition	77
2.2 Stopping Times	85
2.3 Canonical Form of a Process	87
2.4 Gaussian Processes	87
2.5 Processes with Independent Increments	88
2.6 Martingales	91
2.7 Markov Processes	101

2.8	Brownian Motion and the Wiener Process	125
2.9	Counting, and Poisson Processes	140
2.10	Marked Point Processes	145
2.10.1	Random Measures	145
2.10.2	Stochastic Intensities	146
2.11	Lévy Processes	154
2.12	Exercises and Additions	163
3	The Itô Integral	173
3.1	Definition and Properties	173
3.2	Stochastic Integrals as Martingales	185
3.3	Itô Integrals of Multidimensional Wiener Processes	190
3.4	The Stochastic Differential	193
3.5	Itô's Formula	197
3.6	Martingale Representation Theorem	198
3.7	Multidimensional Stochastic Differentials	201
3.8	The Itô Integral with Respect to Lévy Processes	204
3.9	The Itô–Lévy Stochastic Differential and the Generalized Itô Formula	207
3.10	Exercises and Additions	208
4	Stochastic Differential Equations	213
4.1	Existence and Uniqueness of Solutions	213
4.2	Markov Property of Solutions	231
4.3	Girsanov Theorem	237
4.4	Kolmogorov Equations	241
4.5	Multidimensional Stochastic Differential Equations	251
4.6	Stability of Stochastic Differential Equations	254
4.7	Itô–Lévy Stochastic Differential Equations	265
4.7.1	Markov Property of Solutions of Itô–Lévy Stochastic Differential Equations	267
4.8	Exercises and Additions	267

Part II Applications of Stochastic Processes

5	Applications to Finance and Insurance	277
5.1	Arbitrage-Free Markets	278
5.2	The Standard Black–Scholes Model	283
5.3	Models of Interest Rates	290
5.4	Extensions and Alternatives to Black–Scholes	296
5.5	Insurance Risk	301
5.6	Exercises and Additions	307

6 Applications to Biology and Medicine	311
6.1 Population Dynamics: Discrete-in-Space–Continuous-in-Time Models	311
6.2 Population Dynamics: Continuous Approximation of Jump Models	322
6.3 Population Dynamics: Individual-Based Models	326
6.3.1 A Mathematical Detour	329
6.3.2 A “Moderate” Repulsion Model	332
6.3.3 Ant Colonies	338
6.3.4 Price Herding	348
6.4 Neurosciences	349
6.5 Exercises and Additions	355
Measure and Integration	359
A.1 Rings and σ -Algebras	359
A.2 Measurable Functions and Measure	361
A.3 Lebesgue Integration	364
A.4 Lebesgue–Stieltjes Measure and Distributions	369
A.5 Radon Measures	373
A.6 Stochastic Stieltjes Integration	374
Convergence of Probability Measures on Metric Spaces	377
B.1 Metric Spaces	377
B.2 Prohorov’s Theorem	388
B.3 Donsker’s Theorem	388
Elliptic and Parabolic Equations	397
C.1 Elliptic Equations	397
C.2 The Cauchy Problem and Fundamental Solutions for Parabolic Equations	398
Semigroups of Linear Operators	403
Stability of Ordinary Differential Equations	407
References	411
Nomenclature	421
Index	425

An Introduction to Continuous-Time Stochastic
Processes

Theory, Models, and Applications to Finance, Biology,
and Medicine

Capasso, V.; Bakstein, D.

2012, XIII, 434 p. 14 illus.,

ISBN: 978-0-8176-8346-7

A product of Birkhäuser Basel
