

Contents

1	Introduction	1
1.1	Basic System Elements	1
1.2	Problems in a Queueing System	3
1.3	A Historical Perspective	4
1.4	Modeling Exercises	12
2	System Element Models	15
2.1	Probability Distributions as Models	15
2.2	Identification of Models	20
2.2.1	Collection of Data	20
2.2.2	Tests for Stationarity	20
2.2.3	Tests for Independence	21
2.3	Distribution Selection	21
2.4	Review Exercises	22
3	Basic Concepts in Stochastic Processes	25
3.1	Stochastic Process	25
3.2	Point, Regenerative, and Renewal Processes	26
3.3	Markov Process	26
3.4	Renewal Process	31
4	Simple Markovian Queueing Systems	37
4.1	A General Birth and Death Queueing Model	37
4.2	The Queue $M/M/1$	42
4.2.1	Departure Process	49
4.3	The Queue $M/M/s$	51
4.4	The Finite Queue $M/M/s/K$	60
4.5	The Infinite Server Queue $M/M/\infty$	66
4.6	Finite Source Queues	67
4.7	Other Models	71
4.7.1	The $M/M/1/1$ System	71
4.7.2	Markovian Queues with Balking	73
4.7.3	Markovian Queues with Reneging	75

4.7.4	Phase Type Machine Repair	76
4.8	Remarks	77
4.9	Exercises	77
5	Imbedded Markov Chain Models	85
5.1	Imbedded Markov Chains	85
5.2	The Queue $M/G/1$	86
5.3	The Queue $G/M/1$	108
5.3.1	The Queue $G/M/1/K$	119
5.4	Exercises	123
6	Extended Markov and Renewal Models	127
6.1	The Bulk Queue $M^{(X)}/M/1$	127
6.2	The Bulk Queue $M/M^{(X)}/1$	130
6.3	Imbedded Markov Chain Analysis of Bulk Queues	133
6.4	The Queues $M/E_k/1$ and $E_k/M/1$	135
6.5	The Bulk Queues $M/G^K/1$ and $G^K/M/1$	138
6.6	The Queues $E_k/G/1$ and $G/E_k/1$	140
6.7	The Queue $M/D/s$	141
6.8	The Queue $M/M/1$ with Priority Disciplines	141
6.9	Renewal Process Models	153
6.10	Exercises	155
7	Queueing Networks	159
7.1	Introduction	159
7.2	The Markovian Node Network	160
7.3	Queues in Series	163
7.4	Queues with Blocking	166
7.5	Open Jackson Networks	168
7.6	Closed Jackson Networks	171
7.7	Cyclic Queues	173
7.8	Remarks	174
7.9	Exercises	174
8	Matrix-Analytic Queueing Models	177
8.1	Introduction	177
8.2	Phase Type Distributions	178
8.3	Markovian Arrival Process	181
8.4	Analysis of Queueing Models Using MAM	183
8.5	Numerical Examples	191
8.6	Simulation of MAP	196
8.7	Exercises	197

9	The Queue $G/G/1$ and Approximations	201
9.1	Bounds for Mean Waiting Time	201
9.2	Little's Law $L = \lambda W$	206
9.3	Approximations	207
9.4	Diffusion Approximation	210
9.5	Fluid Approximation	213
9.6	Remarks	214
10	Statistical Inference	215
10.1	Introduction	215
10.2	Birth and Death Process Models	217
10.3	Imbedded Markov Chain Models for $M/G/1$ and $G/M/1$	222
10.4	The Queue $G/G/1$	223
10.5	Other Methods of Estimation	225
10.6	Tests of Hypotheses	227
10.7	Control of Traffic Intensity in $M/G/1$ and $G/M/1$	228
10.8	Remarks	230
11	Decision Problems in Queueing Theory	233
11.1	Introduction	233
11.2	Performance Measures for Decision-Making	234
11.3	Design Problems in Decision-Making	234
11.4	Control Problems in Decision-Making	237
12	Queueing Theory Applications in Manufacturing Systems	239
12.1	Introduction	239
12.2	Modeling a Flexible Manufacturing System	243
12.3	Assembly Lines with Finite Buffers	246
12.4	A Supply Chain with Multiple Suppliers	250
13	Computer and Communication Systems	255
13.1	Modeling Computer Systems	256
13.2	Modeling Communication Systems	259
13.3	Modeling and Analysis using Computational Tools	260
13.4	Remarks	271
13.5	Exercises	272
14	Simulating Queueing Systems	273
14.1	Using MATLAB	276
14.2	Other Tools for Simulating and Analyzing	284
14.3	Remarks	290
14.4	Exercises	291

APPENDIX A

Poisson Process Properties and Related Distributions	295
A.1 Properties of the Poisson Process	295
A.2 Variants of the Poisson Process	297
A.3 Hyperexponential Distribution (HE)	299
A.4 Erlang Distribution (E_k)	300
A.5 Mixed Erlang Distributions	301
A.6 Coxian Distributions; Phase Type Distribution (PH)	302
A.7 A General Distribution	302
A.8 Some Discrete Distributions	303

APPENDIX B

Markov Process	305
B.1 Kolmogorov Equations	305
B.2 The Poisson Process	306
B.3 Classification of States	308

APPENDIX C

Results from Mathematics	311
C.1 Reimann–Stieltjes Integral	311
C.2 Laplace Transforms	312
C.3 Generating Functions	314
