# Contents

Dedication ................................................................. v
Preface ........................................................................ viii

# 1 Human Aging: Present and Future ......................... 1
  Demographics ................................................................. 1
  Infectious Diseases of the Aging ....................................... 5
  Limits on Life Expectancy and Future Prospects ............... 7
  Theories of Senescence ...................................................... 11
  Chapter Summary ............................................................ 14
  References ........................................................................ 15

# 2 Aging and Altered Resistance to Infection .................. 19
  Relatively Common Bacterial Infections of Aging Humans ... 20
  Selected Examples of Age-Associated Susceptibility to Bacterial Infections ...................................................... 24
  Bacterial Interactions with Mucosal Surfaces ...................... 28
  Antibiotic Resistance and Bacterial Variation .................... 39
  Viral Infections in Aging Humans ...................................... 42
  Protozoan Parasites in Aging Subjects ................................ 47
  Fungal Infections in Aging Subjects .................................... 50
  Chapter Summary ............................................................ 51
  References ........................................................................ 53

# 3 Senescence of Natural/Innate Resistance to Infection .... 61
  Pattern Recognizing Receptors of Innate Immunity ............. 62
  Phagocytic Cells: Monocytes/Macrophages ....................... 72
  Microbial Evasion of Phagocytic Destruction .................... 80
  Age-Related Changes in Macrophages ............................... 81
  Phagocytic Cells: Neutrophils ........................................... 96
  Natural Killer/Lymphokine-Activated Killer Cells ................ 105
  Chapter Summary ............................................................ 115
  References ........................................................................ 117

# 4 Aging of Adaptive/Acquired Immunity ....................... 135
  Aging of the Thymus and Thymus-Derived (T) Cells ............. 136
  The Functions and Diversity of Peripheral T Cells ............... 145
  Summary: Known and Cognizable Effects of Aging T Cells ...... 172
  Differentiation, Functions, and Aging of B Cells ................ 183
Aging, Immunity, and Infection
Albright, J.F.; Albright, J.W.
2003, X, 242 p., Hardcover
ISBN: 978-0-89603-644-4
