Contents

Preface ............................................................................................................. v
Contributors ..................................................................................................... x

1 The Pathogenesis of Disease Due to Nontypeable Haemophilus influenzae
Gail G. Hardy, Simone M. Tudor, and Joseph W. St. Geme, III ........ 1

2 The Pathogenesis of Disease Due to Type b Haemophilus influenzae
Ruth Aubrey and Christoph Tang ...................................................... 29

3 General Methods for Culturing Haemophilus influenzae
Grant Poje and Rosemary J. Redfield ............................................... 51

4 Transformation of Haemophilus influenzae
Grant Poje and Rosemary J. Redfield ............................................. 57

5 Diagnosis of Infection
Alex van Belkum and Loek van Alphen ........................................... 71

6 Characterization of Plasmids
Ioanna D. Dimopoulou, Mohd-Zain Zaini, and Derrick W. Crook ...................................................................... 93

7 Protein Characterization by Two-Dimensional Gel Electrophoresis
Phillip Cash and J. Simon Kroll ....................................................... 101

8 Monitoring Gene Expression Using DNA Arrays
Tahir R. Ali, Ming-Shi Li, and Paul R. Langford ............................. 119

9 Gene Expression Technology
Xavier de Bolle and Christopher D. Bayliss ................................... 135

10 The Genome Sequence of Haemophilus influenzae
Derek W. Hood ................................................................................... 147

11 Structural Profiling of Short-Chain Lipopolysaccharides
from Haemophilus influenzae
Elke K. H. Schweda and James C. Richards .................................. 161

12 Mutagenesis of H. influenzae
Mark A. Herbert .................................................................................. 185
