Preface ............................................................................................................................ v  
Contributors ................................................................................................................... xi  

## PART I. BASIC CONCEPTS IN ONCOGENE RESEARCH

1 Genetic Basis of Cancer Progression ................................................................. 3  
   **Susan J. Done and Jeremy A. Squire**  
2 The Molecular Basis of Chromosomal Instability in Human Cancer Cells .............. 19  
   **Daniel P. Cahill**  
3 Signal Transduction Networks: Ras as a Paradigm ............................................. 35  
   **Frank McCormick**  
4 Oncogenic Receptor Tyrosine Kinases .............................................................. 47  
   **Mark H. Kirschbaum, Mina D. Marmor, and Yosef Yarden**  
5 Ras-Mediated Deregulation of Gene Expression and Contribution to Oncogenesis ......................................................... 77  
   **Gretchen A. Murphy and Channing J. Der**  
6 The Interplay Between Tumor Suppressor Genes and Oncogenes in Tumorigenesis .......... 101  
   **Eric C. Holland**  
7 Genetic Basis of Altered Responsiveness of Cancer Cells to Their Microenvironment ........ 113  
   **Amato J. Giaccia**  

## PART II. THE FUNCTIONAL IMPACT OF ONCOGENE EXPRESSION ON CANCER CELLS—THERAPEUTIC IMPLICATIONS

8 Deregulation of Cell Cycle Progression by Oncogenic Transformation .................. 133  
   **Marcelo L. Rodriguez-Puebla, Adrian M. Senderowicz, and Claudio J. Conti**  
9 Oncogenes as Regulators of Cell Survival:  
   The Role of Oncogenes and Tumor Suppressor Genes in the Induction of Resistance to Anoikis and Hypoxia .......... 153  
   **Kirill Rosen and Jorge Filmus**  
10 Oncogenes and Tumor Angiogenesis ................................................................. 171  
   **Janusz Rak and Robert S. Kerbel**  
11 Oncogenes as Therapeutic Targets to Prevent Metastasis ............................... 219  
   **Ann F. Chambers and Hemanth J. Varghese**  
12 The Impact of Oncogenes on Tumor Maintenance ........................................... 229  
   **Senji Shirasawa and Takehiko Sasazuki**
13 Primary and Secondary Events
   in Oncogene-Driven Tumor Development:
   Lessons from Transgenic Model Systems ......................... 245
   Michaela Herzig and Gerhard Christofori

PART III. ONCOGENES AS TARGETS FOR ANTICANCER THERAPY IN VIVO

14 Targeting Oncogenes in Hematopoietic Malignancies .......... 297
   Michael E. O’Dwyer and Brian J. Druker

15 Clinical Evaluation of Agents Targeting
   Epidermal Growth Factor Receptor (EGFR) in Cancer ........ 313
   Edward H. Lin and James L. Abbruzzese

16 Inhibition of the HER-2/neu Oncogene:
   A Translational Research Model for the Development
   of Future Targeted Therapies ............................................. 331
   Gottfried E. Konecny, Jane Arboleda, Dennis J. Slamon,
   and Mark Pegram

17 Farnesyltransferase Inhibitors as Anticancer Agents .......... 353
   Adrienne D. Cox

18 Targeting Oncogenic Signaling Pathways
   in Human Astrocytomas ................................................... 363
   Gelareh Zadeh and Abhijit Guha

19 Targeting Oncogenes in Pediatric Malignancies ................. 383
   Giannoula Klement and Robert S. Kerbel

20 Inhibiting Signal Transduction as an Approach
   to Radiosensitizing Tumor Cells ..................................... 409
   Eric J. Bernhard, Anjali K. Gupta,
   Elizabeth Cohen-Jonathan, Ruth J. Muschel,
   Stephen M. Hahn, and W. Gillies McKenna

21 Oncogenes as Targets for Cancer Vaccines ...................... 433
   Samir N. Khleif and Joseph A. Lucci, III

22 Bcl-2 Antisense Oligonucleotides Therapy for Cancer:
   Targeting the Mitochondria .......................................... 453
   Finbarr E. Cotter and Dean A. Fennell

Index ...................................................................................... 469
