Introduction
Electrolytes
The Interior of an Electrolyte
Interfaces
## Contents

Encountering an Interface .................................................. 35
The Solution/Air Interface .................................................. 36
The Metal/Solution Interface ................................................ 37
Metal Ions in Two Different Chemical Environments .................. 38
The Electrical Double Layer ................................................ 39
  The Gouy—Chapman Model of the Electrical Double Layer .......... 40
  The Electrostatic Potential and Potential Difference .................. 40
  The Stern Model of the Electrical Double Layer ...................... 41
  The Bockris—Devanathan—Müller Model of the Electrical Double Layer 42
Significance of the Electrical Double Layer to Corrosion ............ 43

Electrode Potentials ......................................................... 44
  The Potential Difference Across a Metal/Solution Interface ......... 44
  Relative Electrode Potentials .......................................... 45
  The Electromotive Force Series ....................................... 46
Reference Electrodes for the Laboratory and the Field ............... 48
Measurement of Electrode Potentials .................................... 52
Problems ......................................................................... 53
References ..................................................................... 55

4 A Brief Review of Thermodynamics ......................................... 57
  Introduction .................................................................. 57
  Thermodynamic State Functions ....................................... 57
    Internal Energy ......................................................... 57
    Entropy .................................................................. 58
    Enthalpy .................................................................. 59
    Helmholtz and Gibbs Free Energies ................................. 59
    Free Energy and Spontaneity ....................................... 60
    Relationships Between Thermodynamic Functions ............... 61
  The Chemical Potential and Standard States ......................... 63
  More About the Chemical Potential .................................... 63
  A Note About Units for $\Delta G^\circ$ or $\Delta G$ ......................... 64
  The Free Energy and Electrode Potentials .............................. 65
  The Nernst Equation ....................................................... 66
    Standard Free Energy Change and the Equilibrium Constant .... 67
A Quandary – The Sign of Electrode Potentials ....................... 68
  Factors Affecting Electrode Potentials ................................. 69
Problems ......................................................................... 70
References ..................................................................... 72

5 Thermodynamics of Corrosion: Electrochemical Cells and Galvanic Corrosion ........................................... 73
  Introduction .................................................................. 73
  Electrochemical Cells ..................................................... 73
    Electrochemical Cells on the Same Surface ......................... 75
  Galvanic Corrosion .......................................................... 76
    Galvanic Series .......................................................... 76
    Cathodic Protection ...................................................... 79
  Two Types of Metallic Coatings .......................................... 80
    Titanium Coatings on Steel: A Research Study .................... 82

## 9 Passivity

### Introduction
- Aluminum: An Example
- What is Passivity?
- Early History of Passivity
- Thickness of Passive Oxide Films
- Purpose of This Chapter

### Electrochemical Basis for Passivity

### Theories of Passivity
- Adsorption Theory
- Oxide Film Theory
- Film Sequence Theory

### Surface Analysis Techniques for the Examination of Passive Films
- X-ray Photoelectron Spectroscopy (XPS)
- X-ray Absorption Spectroscopy
- Scanning Tunneling Microscopy

### Models for the Passive Oxide Film on Iron
- Bilayer Model
- Hydrous Oxide Model
- Bipolar-Fixed Charge Model
- Spinel/Defect Model
- What Do These Various Models Mean?

### Passive Oxide Films on Aluminum
- Air-Formed Oxide Films
- Films Formed in Aqueous Solutions

### Properties of Passive Oxide Films
- Thickness
- Electronic and Ionic Conductivity
- Chemical Stability
- Mechanical Properties
- Structure of Passive Films

### Passivity in Binary Alloys
- Electron Configuration Theory
- Oxide Film Properties
- Percolation Theory
- Graph Theory Model

### Passivity in Stainless Steels
- Electrochemical Aspects
- Composition of Passive Films on Stainless Steels

### Passivity by Alloying with Noble Metals
- Anodic Protection

### References
## 10 Crevice Corrosion and Pitting

### Introduction ........................................ 263
**Crevice Corrosion** .................................... 263
  - Initiation of Crevice Corrosion ....................... 264
  - Propagation of Crevice Corrosion ..................... 269
  - Crevice Corrosion Testing ............................. 272
  - Area Effects in Crevice Corrosion .................... 274
  - Protection Against Crevice Corrosion ................. 275
**Pitting** .............................................. 277
  - Critical Pitting Potential ............................ 278
  - Experimental Determination of Pitting Potentials ... 280
  - Effect of Chloride Ions on the Pitting Potential ... 282
  - Effect of Inhibitors on the Pitting Potential ........ 283
  - Mechanism of Pit Initiation ............................ 283
  - Mechanism of Pit Propagation ........................... 286
  - Protection Potential .................................... 288
  - Metastable Pits and Repassivation ..................... 290
  - Experimental Pourbaix Diagrams for Pitting .......... 291
  - Effect of Molybdenum on the Pitting of Stainless Steels .... 293
  - Effect of Sulfide Inclusions on the Pitting of Stainless Steels .... 294
  - Effect of Temperature ................................ 294
  - Protection Against Pitting ............................ 296
**Pitting of Aluminum** .................................. 297
  - Occluded Corrosion Cells .............................. 300
    - Occluded Corrosion Cell (OCC) on Iron .............. 301
    - Occluded Corrosion Cells on Copper and Aluminum ... 303
    - Differences Between Pitting and Crevice Corrosion ... 306
**Detection of Corrosion Pits** ............................ 306
**Problems** .......................................... 308
**References** .......................................... 311

## 11 Mechanically Assisted Corrosion

### Introduction ........................................ 315
**Stress-Corrosion Cracking** ............................ 318
  - Mechanical Metallurgy ................................ 318
  - Characteristics of Stress-Corrosion Cracking ......... 319
  - Stages of Stress-Corrosion Cracking .................. 320
  - Fracture Mechanics and SCC ............................ 323
  - SCC Testing .......................................... 331
  - Interpretation of SCC Test Data ....................... 334
  - Metallurgical Effects in SCC .......................... 335
  - Environmental Effects on SCC .......................... 336
  - Mechanisms of SCC ..................................... 339
  - Protection Against Stress-Corrosion Cracking ......... 345
**Corrosion Fatigue** .................................... 346
  - Corrosion Fatigue Data ................................ 347
  - Protection Against Corrosion Fatigue ................. 348
**Cavitation Corrosion** ................................ 349
## Contents
