# Contents

1 Introduction to Design Science Research ............................................. 1
  1.1 What Is Design? – Different Perspectives ...................................... 1
  1.2 What Is Research? ................................................................. 2
  1.3 Is Design a Science? .............................................................. 3
  1.4 What Is Design Science Research? ............................................. 5
  1.5 Placing DSR in Context .......................................................... 5
  1.6 The Spectrum of IS DSR .......................................................... 6
  1.7 Difference Between Routine Design Practice and DSR ...................... 7
  1.8 Conclusions ............................................................................ 8
References ....................................................................................... 8

2 Design Science Research in Information Systems ................................... 9
  2.1 Information Systems Research .................................................... 9
  2.2 Summary of Hevner, March, Park, and Ram 2004 MISQ Paper .......... 10
  2.3 Impacts of 2004 MISQ Paper on Design Science Research ............. 13
  2.4 Extending the Reach of Design Science Research in IS .................. 14
    2.4.1 Design Science Research vs. Professional Design .................. 15
    2.4.2 Design as Research vs. Researching Design .......................... 15
    2.4.3 Design Science Research Cycles ........................................ 16
    2.4.4 A Checklist for Design Science Research ............................... 19
    2.4.5 Publication of Design Science Research ............................... 19
References ....................................................................................... 21

3 Design Science Research Frameworks ............................................... 23
  3.1 Understanding the Natural and Artificial Worlds ............................ 23
  3.2 Toward a Theory of Complex Systems ........................................ 24
  3.3 Systems Development in Information Systems Research ................ 25
  3.4 The General Design Cycle ....................................................... 26
  3.5 Action Research Framework ..................................................... 27
  3.6 The Design Science Research Methodology (DSRM) ...................... 28
  3.7 Concluding Thoughts ............................................................. 31
References ....................................................................................... 31
4 On Design Theory
4.1 What Is Theory? .................................. 33
4.2 Cycle of Theory Building ......................... 34
  4.2.1 Observation .................................. 34
  4.2.2 Classification ................................. 35
  4.2.3 Defining Relationships ......................... 35
  4.2.4 Anomaly – Improving Descriptive Theory ........ 36
4.3 Transition to Normative Theory ................... 36
4.4 Taxonomy of Theory Types in Information Systems .. 37
4.5 Is Design Theory Possible? ......................... 38
  4.5.1 Information Systems Design Theory ............. 39
  4.5.2 Hooker’s View on Design Theory ............... 40
  4.5.3 Toward the Anatomy of an IS Design Theory .... 41
4.6 Conclusions .................................. 42
References .................................. 42

5 Twelve Theses on Design Science Research in Information Systems
5.1 Introduction .................................. 43
5.2 Thesis 1: IS Is an Applied or Practical Discipline .. 44
5.3 Thesis 2: Prescriptive Research Is an Essential Part of IS as an Applied or Practical Discipline .......... 45
5.4 Thesis 3: The Design Science Activity of Building IT Artifacts Is an Important Part of Prescriptive Research in Information Systems ...................... 47
5.5 Thesis 4: The Primary Interest of IS Lies in IT Applications, and Therefore IS as a Design Science Should Be Based on a Sound Ontology of IT Artifacts and Especially of IT Applications ........... 48
5.6 Thesis 5: IS as a Design Science Builds IT Meta-artifacts That Support the Development of Concrete IT Applications .................................. 49
5.7 Thesis 6: Prescriptive Knowledge of IT Artifacts Forms a Knowledge Area of Its Own and Cannot Be Reduced to the Descriptive Knowledge of Theories and Empirical Regularities ............. 50
5.8 Thesis 7: The Resulting IT Meta-artifacts Essentially Entail Design Product and Design Process Knowledge ........... 51
5.9 Thesis 8: The Term “Design Theory” Should Be Used Only When It Is Based on a Sound Kernel Theory ........ 52
5.11 Thesis 10: Explication of the Practical Problems to Be Solved, the Existing Artifacts to Be Improved, the Analogies and Metaphors to Be Used, and/or the Kernel Theories to Be Applied Is Significant in Making the Building Process Disciplined, Rigorous, and Transparent 55

5.12 Thesis 11: IS as a Design Science Cannot Be Value-Free, but It May Reflect Means-End, Interpretive, or Critical Orientation 57

5.13 Thesis 12: The Values of Design Science Research Should Be Made as Explicit as Possible 58

5.14 Conclusions and Final Comments 58
