### Part I What Is Mental Illness? An Epigenetic Model

1 **Genes and Mental Illness** ................................................................. 3
   1.1 The Evolution of the Concept of Mental Illness .......................... 3
   1.2 Gene-Environment Interaction and Brain Morphology and Function ................................................. 4
   1.3 Gene–Environment Interaction: Serotonin Transporter Gene as an Exemplar ...................................... 5
   1.4 Emerging Model of Mental Illness: Gene × Meme Interaction ................................................................. 7
   References ....................................................................................... 8

2 **How Does Stress Work? The Role of Memes in Epigenesis** ............. 11
   2.1 Stress, Aging, and Disease .......................................................... 11
   2.2 Stress, Memes, and the Brain ....................................................... 12
   2.3 Role of Stress and Nurturing in Development: Epigenesis ............... 15
   2.4 Environment Changes Epigenome ................................................. 16
   2.5 Memes and Epigenesis ................................................................. 20
   2.6 Stress Awakens Dormant Memes Resulting in Mental Illness ........... 21
   References ....................................................................................... 22

3 **Culture and Mental Illness** ............................................................. 25
   3.1 Culture and Presenting Symptoms ............................................. 25
   3.2 Culture-Specific Psychiatric Syndromes ....................................... 26
   3.3 Enculturation and Memes ............................................................ 26
   3.4 Memes for Being Ill ................................................................. 26
   References ....................................................................................... 27

4 **Genetic–Memetic Model of Mental Illness – Migration and Natural Disasters as Illustrations** ................ 29
   4.1 Migration ..................................................................................... 29
   4.2 Natural Disasters ........................................................................ 32
   References ....................................................................................... 33
### Part II  Evolution and Mental Health: Genes, Memes, Culture, and the Individual

### 5 What Do We Inherit from Our Parents and Ancestors? 37
   5.1 Like Parent, Like Child 37
   5.2 How Does Culture Affect Behavior? 38
   5.3 Memes and Cultural Change 38
   5.4 Memeplexes 39
   References 39

### 6 Genes 41
   6.1 Human Genes 41
   6.2 Mendelian Genetics 42
   6.3 Genes and Mutation 42
   6.4 Sex-Linked Genes 46
   6.5 Polygenic Inheritance 47
   6.6 How Do Genes Work? 48
   References 49

### 7 Evolution 51
   7.1 In the Beginning 51
   7.2 In a Changing, Hostile World 54
   7.3 The Selfish Gene 54
   7.4 Wonderful Random Errors 56
   7.5 Wonderful Invention of Sex 56
   7.6 Darwin and Natural Selection 58
   7.7 Somatic Evolution 62
   7.8 Universal Darwinism 64
   References 81

### 8 Learning, Imitation, and Memes 83
   8.1 Evolution of Complex Organisms 83
   8.2 Trial and Error 84
   8.3 Learn or Perish 84
   8.4 Imitation, Shortcut to Learning 85
   8.5 Coevolution of the Brain and Memes 86
   8.6 Empathy and Mirror Neuron System 88
   8.7 Meme Generation and Meme Infection 89
   8.8 What Is a Meme? 91
   References 93

### 9 Storage and Evolution of Memes in the Brain 95
   9.1 Storage of Memes as Memory 95
      9.1.1 Implicit Memory 96
      9.1.2 Explicit Memory 99
      9.1.3 Learned Fear 100
      9.1.4 Learning Safety 101

16.1 Blocking the Entrance and Induction of Pathogenic Memes 187
16.2 Treating Memes in the Brain ..................................... 188
16.2.1 Identifying Pathogenic Memes and Memeplex Components 188
16.2.2 Identifying Capsules and Vehicles ........................... 189
16.2.3 Neutralizing Capsules and Vehicles ......................... 190
16.2.4 Deconstructing and Suppressing Memes .................... 191
16.2.5 Augmenting Protective Memes .............................. 191
16.3 Conventional Meme–Directed Therapies ....................... 192
16.4 Need for Novel Therapies ....................................... 192
References .............................................................. 193

17 Broad-Spectrum Memetic Therapies .................................. 195
17.1 What is Broad-Spectrum Meme-Oriented Therapy? ................ 195
17.2 Sleep, Sedation, and Electroconvulsive Therapy ................ 196
17.3 Relaxation and Meditation ...................................... 197
17.4 Hypnosis ......................................................... 197
17.5 Music and Dance Therapy ..................................... 198
17.6 Massage Therapy ............................................... 199
17.7 Exercise ......................................................... 200
17.8 Bibliotherapy ................................................... 200
References .............................................................. 200

18 Specific Memetic Therapies ........................................... 203
18.1 Psychotherapies as Memetic Therapies ......................... 203
18.2 Behavior Therapy, Dialectical Behavior Therapy (DBT), Cognitive–Behavioral Therapy (CBT), Rational Emotive Behavioral Therapy (REBT), Interpersonal Therapy (IPT) ......................... 204
18.3 Psychodynamic Psychotherapy .................................. 206
18.4 Toward a United, Integrated Memetic Concept of Psychotherapy .................................................. 207
18.5 Need for New Meme-Literate Psychotherapies ................ 209
References .............................................................. 210

19 Genetic–Memetic Prevention .......................................... 213
19.1 Epigenesis in Prevention ........................................ 213
19.2 Early Diagnosis and Treatment of Vulnerable Children ......... 214
19.3 Early Protection from Pathogenic Memes ...................... 215
19.4 Vaccination ...................................................... 216
### Part IV Specific Psychiatric Syndromes

#### 20 Overview of Specific Syndromes
- **20.1 Introduction** .......................................................... 223
- **20.2 Gene–Meme Symbiosis and Mental Illness** .................. 224
- **20.3 Toward a Dimensional Approach in Identifying**
  and Treating Mental Illness .............................................. 225

#### 21 Attention-Cognition Spectrum Syndromes: Delirium,
Dementia, Impulse Control Syndromes, ADHD, Antisocial
Personality, Obsessive-Compulsive Personality Traits,
Obsessive-Compulsive Syndrome ......................................... 229
- **21.1 Gene × Meme Interaction, Evolutionary Adaptation,**
  and Syndromes ............................................................... 229
  - **21.1.1 Global Dysregulation of Meme Processing:**
    Delirium and Dementia .............................................. 230
  - **21.1.2 Dysregulation of Infrastructure for Meme**
    Processing: Attention-Deficit Disorder (ADHD),
    Impulse and Aggression Dyscontrol, Antisocial Personality .... 231
  - **21.1.3 Dysregulation of Meme-Processing Loop:**
    Preoccupations, Obsessions, Compulsions ..................... 232
- **21.2 Treatment** ............................................................ 235
- References ........................................................................... 236

#### 22 Anxiety-Mood Spectrum Syndromes: Anxiety,
Panic, Phobias, ASD, PTSD, Borderline Syndrome,
Dependent and Avoidant Personalities, Social Phobia,
Bipolarity and Mania, Depression – Neurotic and
Syndromic, Adjustment Disorders ........................................ 237
- **22.1 Gene × Meme Interaction, Evolutionary Adaptation,**
  and Syndromes ............................................................... 237
  - **22.1.1 Anxiety** ............................................................. 238
  - **22.1.2 Panic Syndrome and Agoraphobia** ....................... 239
  - **22.1.3 Specific Phobias** ............................................... 239
  - **22.1.4 Acute Stress and Posttraumatic Stress Syndromes** ... 240
  - **22.1.5 Borderline Syndrome and Traits** ...................... 240
  - **22.1.6 Dependent Personality Traits and Syndrome** .......... 241
  - **22.1.7 Avoidant Personality Traits and Syndrome,**
    Social Phobia ............................................................... 241
Contents

22.1.8 Bipolarity and Mania .................................. 242
22.1.9 Depression – Neurotic and Major Depressive Syndrome ......................... 242
22.1.10 Adjustment Disorders .................................. 244

22.2 Treatment .................................................. 244
22.2.1 Prevention .............................................. 244
22.2.2 Mild Symptoms (Problems of Living and Adjustment Reactions) ................. 245
22.2.3 Neurosis ............................................... 245
22.2.4 Major Syndromes ....................................... 245

References ................................................... 247

23 Reality Perception Spectrum Syndromes (Imagination, Dissociation, Conversion, Somatoform, Misattribution Psychosis) ............................................. 249

23.1 Gene × Meme Interaction and Evolutionary Adaptation ......................... 249
23.1.1 Imagination and Dreaming ................................ 250
23.1.2 Dissociation ........................................... 250
23.1.3 Dissociative Identity Disorder (DID, Multiple Personality) ...................... 251
23.1.4 Misattribution Syndromes: Conversion, Somatization, Hypochondriasis, Chronic Pain (Somatoform Disorders) ......................... 252
23.1.5 Psychosis ............................................... 253
23.1.6 Schizophrenia ......................................... 253

23.2 Treatment .................................................. 256
23.2.1 Mild Dissociative Symptoms, Dissociation in Borderline Syndrome, PTSD ........ 256
23.2.2 Dissociative Identity Disorder (DID, Multiple Personality Syndrome) ............... 256
23.2.3 Misattribution Syndromes: Conversion, Somatization, Hypochondriasis, Chronic Pain, Fibromyalgia, etc. ........................................... 257
23.2.4 Psychosis and Schizophrenia ................................ 257

References ................................................... 258

24 Pleasure Spectrum Syndromes (Substance Use/Abuse, Addictions to Substances and Beliefs, Fanaticism) .................. 261

24.1 Gene × Meme Interaction, Evolutionary Adaptation, and Syndromes ................ 261
24.1.1 Substance Use/Abuse ..................................... 263
24.1.2 Addictions to Substances and Beliefs, Fanaticism .................................. 264

24.2 Treatment .................................................. 264

References ................................................... 265
## 25 Primary Memetic Syndromes: Eating Disorders, Factitious Disorders, Malingering, Meme-Directed Destructive Behaviors

25.1 Gene × Meme Interaction, Evolutionary Adaptation, and Syndromes ........................................ 267

25.1.1 Eating Disorders ........................................ 268

25.1.2 Destructive Meme Infections and Epidemics: Mass Hysteria, Factitious Illness, Suicide, Suicide Bombing, Aggression ........................................ 269

25.1.3 Irrational Beliefs and Delusions ...................... 270

25.2 Treatment ............................................... 270

References ..................................................... 272

## 26 Challenges for the Future

26.1 Genes and Memes – How to Achieve a Peaceful Coexistence ........................................ 275

26.2 Need for New Diagnostic and Therapeutic Approaches and Tools ........................................ 276

26.3 Testable Hypotheses of Gene × Meme × Environment Interaction ........................................ 276

26.4 Memes, Social Sciences, and Neuroscience .................. 277

26.5 Ethical Considerations ..................................... 278

26.6 Post-human Evolution of Memes .......................... 278

Index .......................................................... 281
Genes, Memes, Culture, and Mental Illness
Toward an Integrative Model
