# Contents

Preface .......................................................... vii

Acknowledgments ................................................ xi

## Part I  Hill Lays the Foundation (1877–1878)

1  George William Hill, Mathematician ............................ 3
2  Lunar Theory from the 1740s to the 1870s – A Sketch .......... 9
3  Hill on the Motion of the Lunar Perigee ........................ 31
4  Hill’s Variation Curve ........................................ 55
5  Early Assessments of Hill’s Lunar Theory ..................... 69

## Part II  Brown Completes the Theory (1892–1908),
and Constructs Tables (1908–1919)

6  E. W. Brown, Celestial Mechanician ............................ 75
7  First Papers and a Book .......................................... 79
8  Initiatives Inspired by John Couch Adams’ Papers .......... 109
9  Further Preliminaries to the Systematic Development ......... 123
10  Brown’s Lunar Treatise: Theory of the Motion of the Moon;
    Containing a New Calculation of the Expressions for the Coordinates
    of the Moon in Terms of the Time ............................ 137
11 A Solution-Procedure Without Approximations .................... 157
12 The “Main Problem” Solved ........................................ 167
13 Correcting for the Idealizations: The Remaining Inequalities .... 171
14 Direct Planetary Perturbations of the Moon
(The Adams Prize Paper) ............................................. 181
15 Indirect Planetary Perturbations of the Moon ...................... 193
16 The Effect of the Figures of the Earth and Moon ................. 201
17 Perturbations of Order $(\delta R)^2$ .................................. 207
18 The Tables ............................................................... 209
19 Determining the Values of the Arbitrary Constants ............... 219
20 Ernest W. Brown as Theorist and Computer ....................... 225

Part III Revolutionary Developments in Time-Measurement, Computing,
and Data-Collection

21 Introduction .................................................................. 237
22 Tidal Acceleration, Fluctuations, and the Earth’s Variable
Rotation, to 1939 ......................................................... 239
23 The Quest for a Uniform Time: From Ephemeris Time
to Atomic Time ............................................................ 285
24 1984: The Hill–Brown Theory is Replaced as the Basis of the Lunar
Ephemerides ............................................................... 305
25 The Mathematical and Philosophical Interest in an Analytic
Solution of the Lunar Problem ........................................ 313

Appendix “Observations on the Desirability of New Tables of the
Moon” (undated typescript of 3 pages, possibly intended for Newcomb;
Naval Observatory Library, file of George William Hill) ............. 319

Index ............................................................................. 321
The Hill-Brown Theory of the Moon's Motion
Its Coming-to-be and Short-lived Ascendancy
(1877-1984)
Wilson, C.
2010, XIV, 323 p. 9 illus., 8 illus. in color., Hardcover
