## Contents

### Part I  Experimental Investigation of the Properties of Oscillating Heteromagnetic Structures at Low, Medium, and High Power Levels

1 Spectra of Regular and Noise Signals .................................................. 3  
   1.1 General Remarks: Generalized Models ........................................ 3  
   1.2 Regimes of Low and Middle Power Levels .............................. 16  
   1.3 Regimes of High Power Level ............................................... 22  
      1.3.1 Control by Magnetic Field and High-Frequency Signals Power .............. 22  
      1.3.2 Multifunctional Properties of Powerful Heteromagnetic Oscillators ........... 29  
   1.4 Signal Spectra of Heteromagnetic Interactions on High Power Levels ............... 45  

2 Properties of Structures with Ferrites of Different Magnetizations .... 61  
   2.1 General Remarks ................................................................. 61  
   2.2 Structures with Ferrite KG-8 ............................................. 62  
      2.2.1 Angle of Orientation of FMCR $\varphi = 45^\circ$ .......................... 67  
      2.2.2 Angle of Orientation of FMCR $\varphi = 90^\circ$ ......................... 71  
   2.3 Structures with Ferrite KG-15 ............................................. 76  
      2.3.1 Angle of Orientation of FMCR $\varphi = 0^\circ$ .......................... 76  
      2.3.2 Angle of Orientation of FMCR $\varphi = 45^\circ$ ......................... 83  
      2.3.3 Angle of Orientation of FMCR $\varphi = 90^\circ$ ......................... 87  
   2.4 Structures with Ferrite KG-50 ............................................. 91  
      2.4.1 Angle of Orientation of FMCR $\varphi = 0^\circ$ .......................... 91  
      2.4.2 Angle of Orientation of FMCR $\varphi = 45^\circ$ ......................... 95  
      2.4.3 Angle of Orientation of FMCR $\varphi = 90^\circ$ ......................... 99  
   2.5 Structures with Ferrites KG-65 and KG-140 .............................. 102  
      2.5.1 Angle of Orientation of FMCR $\varphi = 90^\circ$ ......................... 102  
   2.6 Generalization of Experimental Data ....................................... 105  

### 3 Control Over Energy and Spectral Characteristics

**3.1 Control Over Characteristics of Spectral-Pure Signals** .................................................. 107
3.1.1 Structures with Various Orientations in a Magnetic Field ................................................. 107
3.1.2 Structures with Ferrites of Various Magnetization ..................................................... 114

**3.2 Control Over Characteristics of Pseudonoise and Noise Signals** .................................. 124
3.2.1 Structures with Various Orientations in a Magnetic Field ............................................. 124
3.2.2 Structures with Ferrites of Various Magnetization ..................................................... 131

**3.3 Control Over Characteristics of Evenly Spaced Grids of Signal Frequencies** ...................... 139
3.3.1 Structures with Various Orientations in a Magnetic Field ............................................. 139
3.3.2 Structures with Ferrites of Various Magnetization ..................................................... 142

### 4 Generalization Control Characteristics in Generative Structures

**4.1 Structure Characteristics with Various Orientations** .................................................. 149
4.1.1 Structures with KG-8 FMCR ...................................................................................... 149
4.1.2 Structures with KG-15 FMCR .................................................................................. 150
4.1.3 Structures with KG-50 FMCR .................................................................................. 153

**4.2 Structure Characteristics with Various Magnetizations** ................................................... 155
4.2.1 FMCR Orientation Angle $\varphi = 0^\circ$ ................................................................. 157
4.2.2 FMCR Orientation Angle $\varphi = 45^\circ$ .............................................................. 159
4.2.3 FMCR Orientation Angle $\varphi = 90^\circ$ .............................................................. 159

**4.3 Physical Mechanisms of Heteromagnetic Interactions** ................................................ 172

### Part II Process Modeling in Heteromagnetic Structures

### 5 Heteromagnetic Oscillator

**5.1 Equivalent Circuit of a High-Power Bipolar Transistor** ............................................... 175
5.2 Modeling of Static Characteristics of a Powerful Bipolar Transistor ...................................... 181
5.3 Basic Model Equations .................................................................................................. 182
5.4 Calculation of Characteristics of Powerful Heteromagnetic Microwave Oscillators ............ 185
5.5 Modeling of Complicated Regimes ............................................................................... 191

### 6 Multicircuit Model of a Multifunctional Heteromagnetic Oscillator

**6.1 Equivalent Circuit** ........................................................................................................ 199
6.2 Model Equations ............................................................................................................. 202
6.3 Methods of Finalizing Equivalent Parameters of Transistor ............................................. 205
6.4 Equivalent Circuit of a Multifunctional Heteromagnetic Oscillator .................................. 212
6.5 Oscillating Modes of Subharmonic Constituents ............................................................. 214
6.6 Oscillating Modes of Evenly Spaced Frequencies Spectra ............................................... 223
6.7 Regimes of Pseudonoise Signals .................................................................................... 226
Part III  Calculation of Parameters of Heteromagnetic Structures

7 Calculation of Parameters of Transistors, Coupling Elements, Magnetotransistors in a Frequency Band Below 100 GHz

7.1 Bipolar Transistor in Omnirange, UHF Range

7.1.1 General Data on Programs

7.1.2 Test Task

7.2 FET in Omnirange, UHF Range

7.2.1 Determination of Parameters of a FET Model with Schottky Gate

7.2.2 Method for Determination of Transistor Parameters

7.2.3 Test Task

7.3 Powerful FET in EHF Range

7.3.1 Model of EHF Transistor of HEMT-1

7.3.2 Model of EHF Transistor of HEMT-2

7.4 Magneto-electronic Elements of LPL

7.4.1 Coupling Element in Omnirange, UHF Range

7.4.2 Coupling Element in Microwave Frequency, EHF Range

7.5 Powerful Bipolar Transistor in Microwave Frequency Range

7.6 Powerful Bipolar Heteromagnetic Transistor in Microwave Frequency Range

7.7 Powerful Magneto-FET in a Frequency Band Below 30 GHz

7.8 Powerful Magneto-FET in EHF Range

8 Calculation of Thermal Conditions of Magnetotransistors in Continuous and Pulse Modes

8.1 General Remarks

8.2 Nonstationary and Temperature Field of Powerful Magneto-FET in Pulse Mode

8.3 Stationary Thermal Resistance of Powerful Magneto-FET with Squared Shape

8.4 Stationary Thermal Resistance of Powerful Magneto-FET in the Form of Multilayer Cylinder

Part IV  Applied Aspects

9 Influence of External Factors

9.1 General Remarks

9.2 Estimation of Static Load

9.3 Strength of Beam-Type Bonds

9.4 Strength of Glue Fixation

9.5 Strength of Screw Connection

9.6 Resistivity to Dynamic Forces

9.7 Resistivity to Pressure Changes
