1 New Drug Development .................................. 1
  1.1 Introduction ....................................... 1
  1.2 Origin and Goals of the Book ...................... 2
  1.3 The Discipline of Statistics ....................... 2
  1.4 A Lifecycle Perspective on Drug Development ...... 3
  1.5 Design, Conduct, and Analysis ..................... 4
    1.5.1 Compelling Evidence .......................... 4
  1.6 Drug Discovery ..................................... 4
  1.7 Nonclinical Development Programs ................. 5
  1.8 Clinical Development Programs .................... 5
    1.8.1 Ethical Conduct ................................ 6
    1.8.2 Different Studies in a Clinical Development Program ............. 7
  1.9 Manufacturing ...................................... 8
  1.10 Definitions of Clinical Research and Clinical Trials .. 9
    1.10.1 Clinical Research ......................... 9
    1.10.2 Clinical Trials ................................ 10
  1.11 Operational Execution ............................ 10
  1.12 The Central Importance of Biological Considerations .... 10

2 The Regulatory Environment .......................... 11
  2.1 Introduction ....................................... 11
    2.1.1 Goals of the ICH .............................. 12
  2.2 The Food and Drug Administration .................. 12
    2.2.1 The Code of Federal Regulations ............... 13
  2.3 cGMP, cGLP, and cGCP .............................. 14
  2.4 Regulatory Aspects of New Drug Development ........ 14
  2.5 Sponsor and Regulatory Agency Responsibilities .... 15
  2.6 The Investigational New Drug Application .......... 15
    2.6.1 Review of the Investigational New Drug Application ............ 17
### 3 Drug Discovery

#### 3.1 Introduction

- **3.1.1 Small Molecule Drug Candidates**
- **3.1.2 Biopharmaceutical Drug Candidates**

#### 3.2 Overview of Pharmaceutics, Pharmacokinetics, and Pharmacodynamics

- **3.2.1 Drug Receptors**
- **3.2.2 The Pharmacodynamic Phase**
- **3.2.3 The Pharmacokinetic Phase**
- **3.2.4 The Pharmaceutical Phase**

#### 3.3 Medicinal Chemistry

- **3.3.1 Drug Molecules**
- **3.3.2 Macromolecules, Receptors, and Drug Targets**
- **3.3.3 Structure–Activity Considerations and Drug–Receptor Interactions**

#### 3.4 Cheminformatics, Bioinformatics, and Computer-Aided Molecular Design

- **3.4.1 Bioinformatics**

#### 3.5 Biologicals

- **3.5.1 Molecular Genetics and Proteins**
- **3.5.2 Protein Structures**
- **3.5.3 Recombinant DNA Technology**
- **3.5.4 Recombinant Proteins As Drugs**
- **3.5.5 Discovery and Development of Biopharmaceuticals**

#### 3.6 Moving to Nonclinical Research

### 4 Nonclinical Research

#### 4.1 Introduction

- **4.1.1 Reduction, Refinement, and Replacement of Laboratory Animal Studies**

#### 4.2 Pharmacokinetics

- **4.2.1 Absorption**
- **4.2.2 Distribution**
- **4.2.3 Metabolism**
- **4.2.4 Elimination**

#### 4.3 Pharmacology

- **4.3.1 Research Pharmacology Studies**
- **4.3.2 Safety Pharmacology Studies**

#### 4.4 Toxicological Studies

- **4.4.1 Toxicodynamics**
### 4.4.2 Exploratory Toxicology Studies

### 4.4.3 Pre-FIH Regulatory Toxicology Studies

### 4.4.4 Post-FIH Regulatory Toxicology Studies

### 4.4.5 Dose Range-Finding Toxicology

### 4.4.6 Genotoxicity

### 4.5 Assessment of QT Interval Prolongation

#### 4.5.1 Long QT Syndrome: Underlying Molecular Biology

#### 4.5.2 Drug-Induced QT Interval Prolongation

#### 4.5.3 Associated Nonclinical Testing

#### 4.5.4 Short QT Syndrome

### Further Readings

### 5 Designing Clinical Trials

#### 5.1 Introduction

#### 5.2 Classification of Clinical Trials

#### 5.3 Human Pharmacology Trials

#### 5.4 Clinical Pharmacokinetics and Pharmacodynamics

##### 5.4.1 Pharmacokinetic Parameters

##### 5.4.2 Fasting and Fed Pharmacokinetics

##### 5.4.3 Absorption and Bioavailability

##### 5.4.4 Distribution

##### 5.4.5 Metabolism

##### 5.4.6 Elimination/Clearance

#### 5.5 Therapeutic Exploratory Trials

#### 5.6 Therapeutic Confirmatory Trials

#### 5.7 Therapeutic-Use Trials

#### 5.8 Study Design

#### 5.9 Ethical Aspects of Design

#### 5.10 Study Design in Drug Clinical Trials

##### 5.10.1 The Parallel Group Design

##### 5.10.2 The Cross-over Design

##### 5.10.3 Respective Advantages of the Parallel Group and Cross-over Designs

##### 5.10.4 Focus on the Parallel Group Design in This Book

#### 5.11 Central Principles of Experimental Design in Clinical Trials

##### 5.11.1 Replication

##### 5.11.2 Randomization

##### 5.11.3 Local Control

##### 5.11.4 Good Design Simplifies and Validates the Accompanying Analyses

##### 5.11.5 Sample Size Estimation
5.12 The Clinical Study Protocol .......................... 65
  5.12.1 Inclusion and Exclusion Criteria ............ 66
  5.12.2 The Primary Objective ...................... 66
Further Readings ........................................ 67

6 Conducting Clinical Trials I: Experimental Methodology ......... 69
  6.1 Introduction ...................................... 69
  6.2 Blood Pressure Measurement in Clinical Trials ......... 70
    6.2.1 Hypertension ............................... 70
    6.2.2 Surrogate Endpoints in Clinical Trials ....... 71
    6.2.3 Arterial Blood Pressure .................... 72
    6.2.4 Assessing Blood Pressure Change over Time ... 73
    6.2.5 A Cautionary Tale: Blood Pressure Measurement at Your Doctor’s Office ........ 74
    6.2.6 A Cautionary Tale for Clinical Trial Blood Pressure Measurements ............ 75
  6.3 Central Labs ..................................... 75
    6.3.1 Operational Considerations ................. 76
  6.4 Core ECG Labs .................................... 77
  6.5 The Case Report Form ............................ 77
Further Readings ........................................ 78

7 Conducting Clinical Trials II: Operational Execution .......... 79
  7.1 Introduction ...................................... 79
  7.2 The Outsourcing Process .......................... 80
  7.3 Feasibility Evaluations ........................... 80
    7.3.1 More Extensive Feasibility Evaluations ...... 81
    7.3.2 Feasibility Reporting ....................... 82
  7.4 Standard Operating Procedures .................... 82
    7.4.1 Balancing the Degree of Flexibility Within an SOP .................................... 83
    7.4.2 The Necessity of Implementing and Maintaining SOPs .................................. 83
  7.5 Project Management ................................ 84
  7.6 Site and Investigator Recruitment .................. 85
    7.6.1 Principal Investigators ....................... 85
    7.6.2 Responsibilities of Principal Investigators .. 86
    7.6.3 Potential Principal Investigators in Private Practice Settings .................... 86
    7.6.4 Potential Principal Investigators at Larger Medical Institutions .................. 86
    7.6.5 Principal Investigator Training ................ 87
  7.7 Subject Recruitment and Retention .................... 88
    7.7.1 Subject Recruitment ........................... 88
    7.7.2 Subject Retention ............................ 89
7.8 Monitoring Clinical Trials .................................. 90
7.9 Data Management .............................................. 91
  7.9.1 Data Management Plans ................................. 91
  7.9.2 Electronic Data Capture .................................. 92
  7.9.3 Database Development ................................. 92
7.10 A New Paradigm: Allying With Sponsors ................. 93
7.11 Underperforming and Non-performing Clinical Trial Sites ............................................ 93
  7.11.1 Limitations of the Current Model .................... 95
7.12 Another New Paradigm: The Site-Specific CRO .......... 95
  7.12.1 Synergies of a Sponsor CRO and a Site-Specific CRO Working Together .......................... 96
Further Readings ................................................. 97

8 Statistical Analysis ............................................. 99
  8.1 Introduction .................................................. 99
  8.2 Types of Clinical Data ...................................... 100
    8.2.1 Numerical Variables .................................. 100
    8.2.2 Categorical Variables .................................. 100
    8.2.3 Parametric Tests and Nonparametric Tests .......... 101
  8.3 Descriptive Statistics: Summarizing Data ............... 101
    8.3.1 Measures of Central Tendency ....................... 101
    8.3.2 Measures of Dispersion Around a Central Value .... 102
  8.4 Inferential Statistics: Hypothesis Testing .............. 103
    8.4.1 The Search for Compelling Evidence ............... 103
    8.4.2 Variation and Systematic Variation ................. 103
    8.4.3 Between-Groups Variation and Within-Groups Variation ........................................... 104
    8.4.4 Comparing Between-Groups Variance and Within-Groups Variance ................................ 104
    8.4.5 The Term Error Does Not Imply a Mistake ........ 105
  8.5 Probability .................................................. 105
    8.5.1 Likely Events Do Not Always Happen ............... 106
    8.5.2 Clinical Decision-Making ............................. 106
    8.5.3 Sampling Theory ........................................ 107
    8.5.4 The Standard Error of the Mean ....................... 107
  8.6 The Normal Distribution ................................... 108
    8.6.1 Area Under the Normal Curve ......................... 110
    8.6.2 Various Areas Under the Normal Curve ............ 111
  8.7 Analysis of Association .................................... 111
    8.7.1 Direction of an Association ......................... 112
    8.7.2 Degree of Closeness of an Association .............. 112
    8.7.3 Correlation Coefficients .............................. 112
    8.7.4 Determining the Significance of a Product Moment Coefficient ................................ 113

## Contents

### 11 Sample Size Estimation

11.1 Introduction .................................................. 143
11.2 Ethical Issues in Sample Size Estimation .................. 144
11.3 Variables Involved in Sample Size Estimation ............ 145
11.4 Type I and Type II Errors .................................. 146
  11.4.1 The Implications of Type I and Type II Errors .... 146
11.5 Choosing the Variables Needed for Sample Size
  Estimation ..................................................... 147
  11.5.1 Alpha and Beta ........................................ 147
  11.5.2 The Treatment Effect, Its Variance, and the
  Standardized Treatment Effect ......................... 148
11.6 Using the Appropriate Formula to Yield the Sample Size 148
11.7 Influences on the Sponsor’s Choice of These Values ... 149
11.8 Choosing the Objective(s) on Which to Base the
  Sample Size Estimation ................................. 150
11.9 Other Issues to Keep in Mind ................................ 150

### 12 General Safety Assessments

12.1 Introduction .................................................. 153
12.2 Operationalizing the Term Drug Safety .................... 153
  12.2.1 Perspectives of Regulators and Prescribing
  Physicians on Safety Data ............................... 154
12.3 General Safety Assessments ................................. 155
  12.3.1 Extent of Exposure .................................... 156
  12.3.2 Adverse Events .................................... 156
  12.3.3 Common Laboratory Tests .......................... 157
  12.3.4 Vital Signs ......................................... 159
12.4 Acquisition and Management of Safety Data ............... 159
  12.4.1 Adverse Events .................................... 159
  12.4.2 Serious Adverse Event Data ....................... 160
12.5 Analysis Populations ........................................ 161
12.6 Presentation of Safety Data .................................. 161
  12.6.1 Descriptive Approaches to Safety Data ............ 162
  12.6.2 Time-to-Event Analysis ............................ 163
  12.6.3 Differences Between Approaches to Safety
  and Efficacy Data ........................................ 164

Further Readings .................................................. 164

### 13 Efficacy Assessment

13.1 Introduction .................................................. 165
  13.1.1 Superiority, Equivalence, and Noninferiority
  Trials ....................................................... 165
  13.1.2 Group Sequential and Adaptive Study Designs .... 166
13.2 Analysis Populations .......................................... 166
  13.2.1 The Intent-to-Treat Population ...................... 167
  13.2.2 The Per-protocol Population ....................... 167

## 16 Postmarketing Surveillance

16.1 Introduction ........................................... 221
16.2 Limitations of Preapproval Clinical Trials ............. 222
16.3 Individual Differences in Drug Response ............... 223
  16.3.1 Hepatic Impairment ............................... 223
  16.3.2 Renal Insufficiency ............................... 224
  16.3.3 The Elderly ....................................... 224
  16.3.4 Pediatric Populations ............................. 225
16.4 Postmarketing Surveillance ............................. 226
16.5 The 2005 CDER Report to the Nation .................. 227
16.6 The Institute of Medicine’s 2006 Report on Drug Safety . 228
16.7 The Food and Drug Administration Amendments Act of 2007 ........................................... 229
16.8 The FDA’s 2008 Sentinel Initiative .................... 230
  16.8.1 The Science of Safety ............................. 230
  16.8.2 Active Surveillance ............................... 231

Further Readings ........................................... 231

## 17 Main Themes and Concluding Comments

17.1 Introduction ........................................... 233
17.2 Ethical Considerations .................................. 234
17.3 Design, Methodology, Operations, and Analysis ......... 235
  17.3.1 Reducing Bias and Improving Precision ............ 235
  17.3.2 Our Definition of Statistics Revisited ............. 236
  17.3.3 Numerical Representations of Biological Information ........................................... 236
  17.3.4 Some Thoughts on the $p$-Value ........................ 237
17.4 Confidence Intervals and Clinical Significance ......... 238
17.5 Pharmacokinetics and Pharmacodynamics ................. 238
17.6 Decision-Making ........................................ 239
  17.6.1 The Subjective Nature of Many Decisions ............ 239
  17.6.2 Determining Thresholds of Regulatory Concern ...... 241
17.7 Benefit–Risk Considerations ................................ 241
17.8 Biological Considerations Pervade Our Discussions .... 241
  17.8.1 Biological Underpinnings of Precision Medicine .... 242
  17.8.2 Pharmacogenetics ................................... 242
  17.8.3 Pharmacogenomics .................................. 243
  17.8.4 Pharmacoproteomics ................................ 243
17.9 Integrated Pharmaceutical Medicine ..................... 244
17.10 Concluding Comments .................................. 245
