

Contents

Preface	vii
1 Introduction	1
2 Description of the System with Fixed Moments of Impulses and Its Solutions	7
2.1 Spaces of Piecewise Continuous Functions	7
2.2 Description of the System.....	9
2.3 Description of Solutions	10
2.4 Equivalent Integral Equations	14
2.5 The Gronwall–Bellman Lemma for Piecewise Continuous Functions	16
2.6 Existence and Uniqueness Theorems.....	18
2.7 Continuity	20
Notes.....	23
3 Stability and Periodic Solutions of Systems with Fixed Moments of Impulses	25
3.1 Definitions of Stability	25
3.2 Basics of Periodic Systems	27
Notes.....	30
4 Basics of Linear Systems	31
4.1 Linear Homogeneous Systems.....	31
4.2 Linear Nonhomogeneous Systems	41
4.3 Linear Periodic Systems	47
Notes.....	54
5 Nonautonomous Systems with Variable Moments of Impulses	55
5.1 Description of Systems.....	55
5.2 Existence, Uniqueness, and Extension	56
5.3 Beating Phenomena and Related Properties	59
5.4 The Topology on the Set of Discontinuous Functions	62

5.5	B-Equivalence: General Case	63
5.6	Continuity Properties	68
5.7	Generalities of Stability	70
5.8	B-Equivalence: Quasilinear Systems	73
5.9	Poincaré Criterion and Periodic Solutions of Quasilinear Systems ..	78
	Notes	79
6	Differentiability Properties of Nonautonomous Systems	81
6.1	Differentiability with Respect to Initial Conditions	82
6.2	Differentiability with Respect to Parameters	88
6.3	Higher Order B-Derivatives	90
6.4	B-Analyticity Property	93
6.5	B-Asymptotic Approximation of Solutions	95
	Notes	98
7	Periodic Solutions of Nonlinear Systems	99
7.1	Quasilinear Systems: the Noncritical Case	99
7.2	The Critical Case	106
	Notes	111
8	Discontinuous Dynamical Systems	113
8.1	Generalities	113
8.2	Local Existence and Uniqueness	118
8.3	Extension of Solutions	119
8.4	The Group Property	126
8.5	Continuity Properties	128
8.6	B-Equivalence	130
8.7	Differentiability Properties	133
8.8	Conclusion	135
8.9	Examples	135
	Notes	137
9	Perturbations and Hopf Bifurcation of a Discontinuous	
	Limit Cycle	139
9.1	The Nonperturbed System	139
9.2	The Perturbed System	142
9.3	Foci of the D-System	144
9.4	The Center and Focus Problem	147
9.5	Bifurcation of a Discontinuous Limit Cycle	149
9.6	Examples	153
	Notes	154

- 10 Chaos and Shadowing**155
 - 10.1 Introduction and Preliminaries.....155
 - 10.2 The Devaney’s Chaos157
 - 10.3 Shadowing Property162
 - 10.4 Simulations163
 - Notes.....165

- References**.....167

- Index**.....175
