

TABLE OF CONTENTS

Preface	v
List of Contributors	xxvii
Editors' Biographies	xxxiii
Contributors' Biographies	xxxvii

Unit I: Informatics Infrastructure and Data Sources

Chapter 1: Real-Time Public Health Biosurveillance: Systems and Policy Considerations

HENRY ROLKA AND JEAN O'CONNOR

1. Introduction.....	4
2. Background and Recent History	5
2.1 Public Health Surveillance	5
2.2 Impact of the Fall of 2001 on Biosurveillance	5
2.3 BioSense, BioWatch and the National Biosurveillance Integration System	8
3. Policy Considerations in Biosurveillance	10
3.1 Federalism	11
3.2 Privacy and Data Use	13
3.3 Other Policy Considerations	14
4. Achieving Integrated, Real-Time Biosurveillance	14
4.1 Stakeholder Perspectives and Information Requirements	15
4.2 Analytic Requirements	16
4.3 Policy Requirements.....	18
5. Conclusion and Discussion.....	18
<i>Questions for Discussion</i>	19
<i>References</i>	19
<i>Suggested Reading</i>	21
<i>Online Resources</i>	22

Chapter 2: Designing Ethical Practice in Biosurveillance: The Project Argus Doctrine

JEFF COLLMANN AND ADAM ROBINSON

1. Introduction	24
2. Background.....	24

- 3. Overview: Information Protection..... 25
 - 3.1 Fair Information Practice Principles 26
 - 3.2 Proprietary Information 27
 - 3.3 Individually Identifiable Information..... 28
- 4. Methods 30
 - 4.1 Information Scenarios..... 30
 - 4.2 Laws, Regulations, and Good Practice in Managing Sensitive Information..... 35
 - 4.3 Case Study: The Terrorism Information Awareness Program 36
- 5. Results and Analysis..... 37
 - 5.1 Policies and Procedures 38
 - 5.2 Technical Requirements..... 39
 - 5.3 Doctrine Management Process 40
- 6. Conclusion..... 41
 - Acknowledgments 41
- Questions for Discussion*..... 42
- References* 42
- Suggested Reading*..... 44
- Online Resources*..... 44

Chapter 3: Using Emergency Department Data For Biosurveillance: The North Carolina Experience

ANNA E. WALLER, MATTHEW SCHOLER, AMY I. ISING AND DEBBIE A. TRAVERS

- 1. Introduction 46
- 2. Literature Review/Overview of the Field..... 48
 - 2.1 History of ED Data Use for Biosurveillance 48
 - 2.2 Current Status of ED Data Use for Biosurveillance..... 48
 - 2.3 Infectious Disease Syndrome-Based Surveillance Using ED Data 49
 - 2.4 ISDS Consultative Syndrome Group 50
- 3. Technical Approaches for Grouping ED Data into Syndromes for Biosurveillance 51
 - 3.1 Dealing with Negation..... 52
 - 3.2 Issues with Diagnosis Code Data 52
- 4. Biosurveillance in North Carolina..... 53
 - 4.1 History of Syndrome Definitions in NC 54
 - 4.2 The Importance of Data Quality 55
 - 4.3 NC DETECT Case Studies 55
 - 4.3.1 Public Health Surveillance During and After Hurricanes. 55
 - 4.3.2 Influenza 57
 - 4.3.3 Early Event Detection 58

- 4.3.4 Bioterrorism Agent Report 58
- 4.3.5 Case Finding & Infectious Disease Outbreak Monitoring . 59
- 4.3.6 Infectious Disease Retrospective Analyses 59
- 4.3.7 Injury Surveillance..... 60
- 4.4 Conclusions and Discussion 60
- 4.5 Evaluation of NC DETECT 60
- 5. Conclusion..... 62
 - Acknowledgements 62
 - Questions for Discussion*..... 62
 - References* 63
 - Suggested Reading*..... 66
 - Online Resources*..... 66

Chapter 4: Clinical Laboratory Data for Biosurveillance

EILEEN KOSKI

- 1. Introduction 67
- 2. Types of Surveillance 68
 - 2.1 Laboratory Data for Biosurveillance..... 70
 - 2.2 The Clinical Laboratory..... 71
 - 2.2.1 Development of the Clinical Laboratory 71
 - 2.2.2 Laboratory Types..... 72
 - 2.2.3 Sources of Laboratory Data for Biosurveillance..... 74
 - 2.2.4 Components of Laboratory Data for Biosurveillance 75
 - 2.2.5 Data Standards for Biosurveillance 77
 - 2.2.6 Data Analysis..... 77
 - 2.2.7 Underlying Data Characteristics 78
 - 2.3 Relevant Experience and Case Studies 82
 - 2.3.1 The Emergence of West Nile Virus in New York City 82
 - 2.3.2 Lyme Disease in New Jersey 83
 - 2.3.3 Hepatitis in New York City 83
 - 2.3.4 Projections in Florida..... 83
- 3. Conclusions and Discussion 84
- Questions for Discussion*..... 84
- References* 85
- Suggested Reading*..... 87
- Online Resources* 87

Chapter 5: Biosurveillance Based on Test Orders from Veterinary Diagnostic Labs

LOREN SHAFFER

- 1. Introduction 90
 - 1.1 Wildlife as Sentinels of Disease 90

1.2	Pets as Sentinel Indicators of Disease.....	90
1.3	“One Medicine”	91
2.	Surveillance for Outbreaks of Zoonotic Disease.....	92
2.1	National Animal Health Reporting System	92
2.2	National Animal Health Laboratory Network	93
2.3	Veterinary Services Electronic Surveillance Project	93
2.4	Rapid Syndrome Validation Project for Animals	94
2.5	Other Manual Entry Systems.....	94
3.	Improving Outbreak Detection.....	94
3.1	Syndromic Surveillance	95
3.1.1	Preferred Data	96
3.1.2	Data Criteria.....	96
3.2	Veterinary Diagnostic Laboratories.....	97
3.2.1	Case Evidence to Support Using Data.....	97
3.2.2	Determining Animal Representation	99
3.2.3	Estimating Human Representation.....	99
3.2.4	Availability and Timeliness	101
4.	Conclusion	102
	<i>Questions for Discussion</i>	103
	<i>References</i>	104
	<i>Suggested Reading</i>	107
	<i>Online Resources</i>	107

Unit II: Surveillance Analytics

Chapter 6: Markov Switching Models for Outbreak Detection

HSIN-MIN LU, DANIEL ZENG AND HSINCHUN CHEN

1.	Introduction	112
2.	Markov Switching Models	114
2.1	Time Series Generated By Markov Switching Models: An Illustrative Example	116
2.2	Estimation Methods for Markov Switching Models.....	118
3.	Bayesian Inference: An Overview.....	120
3.1	Maximum Likelihood Estimation and Bayesian Inference: An Illustrative Example	120
3.1.1	Likelihood Maximization.....	120
3.1.2	Bayesian Inference.....	121
3.1.3	A Numerical Example	124
3.2	Markov Chain Monte Carlo and Gibbs Sampler	127
4.	Conditional Posterior Distributions of the Markov Switching Models	128

- 4.1 Conditional Posterior Distributions of Regression Parameters.. 129
- 4.2 Conditional Posterior Distributions of Transition Probability ... 132
- 4.3 Conditional Posterior Distributions of Hidden States..... 132
- 4.4 Estimating Markov Switching Models via the Gibbs Sampler.. 135
- 5. Case Study 137
 - Acknowledgements 142
- Questions for Discussion*..... 142
- References* 142
- Suggested Reading*..... 143
- Online Resources*..... 144

Chapter 7: Detection of Events In Multiple Streams of Surveillance Data: Multivariate, Multi-stream and Multi-dimensional Approaches
 ARTUR DUBRAWSKI

- 1. Introduction 146
- 2. Multivariate Analysis 148
 - 2.1 Modeling and Forecasting of Multivariate Baselines 148
 - 2.2 Detection of Events in Multivariate Time Series..... 150
- 3. Multi-Stream Analysis 154
 - 3.1 Consensus Approach..... 155
 - 3.1.1 Handcrafting Specific Detectors 157
 - 3.1.2 Learning Specific Detectors from Data 158
 - 3.2 Multi-Stream Spatial Scan..... 161
- 4. Multi-Dimensional Analysis 162
- 5. Conclusion..... 166
 - Acknowledgements 167
- Questions for Discussion*..... 167
- References* 168
- Suggested Reading*..... 170
- Online Resources*..... 170

Chapter 8: Algorithm Combination for Improved Performance in Biosurveillance: Univariate Monitoring
 INBAL YAHAV, THOMAS LOTZE AND GALIT SHMUELI

- 1. Introduction 173
- 2. Control Charts and Biosurveillance..... 175
 - 2.1 Control Chart Overview..... 177
 - 2.2 Preprocessing Methods 178
- 3. Data and Outbreaks 179
 - 3.1 Data Description 179
 - 3.2 Outbreak Signatures..... 179

4.	Combination Models	180
4.1	Residual Combination.....	182
4.2	Control Chart Combination.....	182
5.	Empirical Study and Results	183
5.1	Experiment Design	183
5.2	Results.....	184
5.2.1	Residuals Combination	184
5.2.2	Control Chart Combination	185
5.2.3	Combining Residuals and Monitoring	187
6.	Conclusions	188
	Acknowledgements	188
	<i>Questions for Discussion</i>	188
	<i>References</i>	189
	<i>Online Resources</i>	189

Chapter 9: Modeling in Space and Time: A Framework for Visualization and Collaboration

DANIEL A. FORD, JAMES H. KAUFMAN AND YOSHI MESIKA

1.	Introduction	192
2.	Modeling: An Overview	192
3.	About STEM	193
3.1	A Common Collaborative Framework.....	194
3.2	A Common Representational Framework.....	195
3.3	Creating and Configuring Components	198
3.3.1	Labels.....	200
3.3.2	Disease Model Computations	202
4.	Conclusion.....	203
	Acknowledgements	204
	<i>Questions for Discussion</i>	204
	<i>References</i>	205
	<i>Suggested Reading</i>	205
	<i>Online Resources</i>	206

Chapter 10: Surveillance and Epidemiology of Infectious Diseases Using Spatial and Temporal Clustering Methods

TA-CHIEN CHAN AND CHWAN-CHUEN KING

1.	Introduction	208
2.	Current Commonly Used Methods in Spatial, Temporal, and Tempo-Spatial Clustering	209

- 2.1 Temporal Clustering Methods 210
 - 2.1.1 Historical Limit, the Concept of Moving Average, and Scan Statistics 210
 - 2.1.2 Cumulative Sum 212
 - 2.1.3 Time Series 213
- 2.2 Spatial Clustering Methods 213
 - 2.2.1 Global Clustering Test 214
 - 2.2.2 Local Clustering Test 215
 - 2.2.3 Focused Clustering Test 218
- 2.3 Spatial and Temporal Clustering Methods 218
 - 2.3.1 Knox Method 219
 - 2.3.2 Space-Time Scan Statistic 219
- 3. Case Studies Using Spatial Clustering Method in Infectious Disease Epidemiology 220
 - 3.1 Respiratory Spread 220
 - 3.2 GI-Related Transmission 222
 - 3.3 Vector-Borne Transmission: Dengue as an Example 222
 - 3.4 Zoonosis: Rabies as an Example 224
 - 3.5 EID: Avian Influenza as an Example 225
- 4. Conclusions, Limitations and Future Directions 227
 - 4.1 What We Have Learned in the Past 227
 - 4.2 Limitations of GIS Studies and Unsolved Problems 228
 - 4.2.1 Data Collection and Quality of GIS Data 228
 - 4.2.2 Limitations in Statistical Methods and Interpretation of Data 229
 - 4.3 Future Directions 230
 - 4.3.1 Flexibility of the Cluster Method in Detecting Irregular Clusters 230
 - 4.3.2 Adjustment for Personal Risk Factors 230
 - 4.3.3 Bayesian Method for Better Prediction 230
- Acknowledgements 231
- Questions for Discussion* 231
- References* 231
- Suggested Reading* 234
- Online Resources* 234

Chapter 11: Age-Adjustment in National Biosurveillance Systems: A Survey of Issues and Analytical Tools for Age-Adjustment in Biosurveillance

STEVEN A. COHEN AND ELENA N. NAUMOVA

- 1. Introduction 236
 - 1.1 Disease surveillance 236

1.2	Case Studies of Influenza: Age-specificity Within Population Subgroups	236
1.2.1	Influenza and Respiratory Infection Hospitalizations in Milwaukee, Wisconsin (1996–2006).....	237
1.2.2	Pneumonia and Influenza in the US Elderly (1991–2004).....	238
1.3	Population Dynamics	239
2.	Denominator Data Sources	240
2.1	Decennial Census.....	240
2.2	Intercensal Population Estimates	241
3.	Graphical Tools to Assess Age Patterns of Disease	242
3.1	Population Pyramids	242
3.1.1	Disease Pyramids.....	243
3.2	Lexis Surfaces.....	245
4.	Analytical Tools for Age-Adjustment.....	247
4.1	Age-Period-Cohort Analysis.....	247
4.1.1	Background.....	247
4.1.2	Model Specification.....	248
4.1.3	Graphical Tools.....	248
4.2	Standardization and Decomposition	249
4.2.1	Direct Standardization	250
4.2.2	Indirect Standardization.....	251
4.2.3	Decomposition.....	253
4.3	Summary Disease Measures	254
5.	Conclusions	255
	Acknowledgements	255
	<i>Questions for Discussion</i>	256
	<i>References</i>	256
	<i>Suggested Reading</i>	257
	<i>Online Resources</i>	258

Chapter 12: Modeling in Immunization and Biosurveillance Research

C. RAINA MACINTYRE, JAMES G. WOOD, ROCHELLE WATKINS
AND ZHANHAI GAO

1.	Introduction.....	259
1.1	Role of Modeling for Vaccination Programs	260
1.2	The Interface with Biosurveillance	261
2.	Modeling of Vaccination Programs.....	262
2.1	Key Concepts.....	262
2.1.1	The Basic Reproductive Number (R_0)	262
2.1.2	Force of Infection	262
2.1.3	Disease States	263

- 2.2 The *SIR* Model 263
 - 2.2.1 The Basic Reproduction Number in the *SIR* Model 264
- 2.3 Endemic Dynamics 265
 - 2.3.1 The Endemic *SIR* Model 265
 - 2.3.2 Immunization 266
 - 2.3.3 Waning of immunity 266
 - 2.3.4 Equilibrium 266
- 2.4 More Realistic Models 269
 - 2.4.1 Age-related Risks 269
 - 2.4.2 Vaccine Efficacy 270
 - 2.4.3 Stochasticity 270
- 2.5 Special Issues for Vaccination 270
 - 2.5.1 Data Requirements and Surveillance 271
- 3. Mathematical Models for Biosurveillance of Vaccine-Preventable Disease 272
 - 3.1 Models of the Reproductive Number in Immunization Biosurveillance 273
 - 3.1.1 Surveillance of Disease Elimination 274
 - 3.1.2 Surveillance of Epidemics 274
 - 3.1.3 Parameter-Free Epidemic Surveillance 275
 - 3.2 Summary 275
 - Acknowledgements 276
 - Questions for Discussion* 276
 - References* 277
 - Suggested Reading* 278

Chapter 13: Natural Language Processing for Biosurveillance: Detection and Characterization From Textual Clinical Reports

WENDY W. CHAPMAN, ADI V. GUNDLAPALLI, BRETT R. SOUTH, AND JOHN N. DOWLING

- 1. Introduction 280
- 2. Overview of Data Sources for Biosurveillance 281
 - 2.1 Surveillance from Non-clinical Data Sources 281
 - 2.1.1 Structured Non-clinical Data 281
 - 2.1.2 Textual Non-clinical Data 282
 - 2.2 Surveillance from Clinical Data Sources 283
 - 2.2.1 Structured Clinical Data 283
 - 2.2.2 Textual Clinical Data 283
- 3. Surveillance from Textual Clinical Data Sources 284
 - 3.1 Methodologies for Processing Clinical Textual Data 284
 - 3.1.1 Keyword-Based NLP Techniques 284

3.1.2	Statistical NLP Techniques.....	285
3.1.3	Symbolic NLP Techniques	286
3.1.4	Evaluation of Text Processing Methods in Biosurveillance	287
3.2	Textual Documentation Generated From a Visit to a Healthcare Facility	288
3.2.1	Making Use of Textual Documentation for Detection and Characterization	288
3.3	Overview of Clinical Textual Data Sources and Their Application in Biosurveillance	290
3.3.1	Triage Chief Complaints.....	294
3.3.2	Ambulatory Visit Notes.....	299
3.3.3	Inpatient Reports: Progress and Findings	301
3.3.4	Discharge Reports.....	303
4.	Conclusion and Discussion.....	304
	Acknowledgements	305
	<i>Questions for Discussion</i>	306
	<i>References</i>	306
	<i>Suggested Reading</i>	310
	<i>Online Resources</i>	310

Chapter 14: Knowledge Mapping for Bioterrorism-Related Literature

YAN DANG, YULEI ZHANG, HSINCHUN CHEN AND CATHERINE A. LARSON

1.	Introduction	311
2.	Literature Review	313
2.1	Online Resources for Knowledge Mapping.....	313
2.2	Units of Analysis for Knowledge Mapping.....	315
2.3	Analysis Techniques for Knowledge Mapping.....	317
2.3.1	Text Mining	317
2.3.2	Network Analysis	318
2.3.3	Information Visualization	319
3.	Research Design	320
3.1	Data Acquisition	321
3.2	Data Parsing and Cleaning.....	321
3.3	Data Analysis.....	321
4.	Research Testbed.....	321
5.	Analysis Results and Discussion	324
5.1	Human Agents/Diseases Related–Bioterrorism Research	325
5.1.1	Productivity Status	325
5.1.2	Collaboration Status.....	326

5.1.3 Emerging Topics.....	328
5.2 Animal Agents/Diseases Related–Bioterrorism Research.....	330
5.2.1 Productivity Status.....	330
5.2.2 Collaboration Status.....	332
5.2.3 Emerging Topics.....	332
6. Conclusion.....	334
Acknowledgements.....	335
<i>Questions for Discussion</i>	335
<i>References</i>	335
<i>Suggested Reading</i>	337
<i>Online Resources</i>	337

Chapter 15: Social Network Analysis for Contact Tracing

YI-DA CHEN, HSINCHUN CHEN AND CHWAN-CHUEN KING

1. Introduction.....	340
2. Network Visualization and Measures in SNA.....	341
3. SNA in Epidemiology.....	343
3.1 Static Analysis of Linkage in a Contact Network for STDs.....	344
3.2 Transmission Dynamics of STDs.....	344
3.3 From STDs to Tuberculosis.....	346
3.4 Summary of SNA Studies in Epidemiology.....	347
4. A Case Study: The SARS Outbreak in Taiwan.....	348
4.1 Taiwan SARS Outbreak and Contact Tracing Dataset.....	348
4.2 Contact Network Construction.....	350
4.3 Connectivity Analysis.....	350
4.4 Topology Analysis.....	351
5. Conclusions.....	354
Acknowledgements.....	355
<i>Questions for Discussion</i>	355
<i>References</i>	356
<i>Suggested Reading</i>	358
<i>Online Resources</i>	358

Unit III: Emergency Response, and Case Studies

Chapter 16: Multi-Agent Modeling of Biological and Chemical Threats

KATHLEEN M. CARLEY, ERIC MALLOY AND NEAL ALTMAN

1. Introduction.....	362
2. Why Multi-Agent Modeling.....	362

3.	Biowar	363
3.1	Agents	364
3.1.1	Agent Characteristics	364
3.1.2	Agent Behavior	365
3.1.3	Daily Agent Cycle	365
3.1.4	Agent Interaction	366
3.2	Diseases	367
3.2.1	Disease Model.....	367
3.2.2	Disease Introduction	368
3.2.3	Disease Progression	368
3.2.4	Medical Diagnosis and Treatment	369
3.3	Cities	371
3.4	Additional Features	372
3.4.1	Climate and Weather	372
3.4.2	Chemical Attacks.....	372
3.4.3	Interventions	372
3.4.4	Scalability and Configurability	373
4.	Illustrative Results	374
5.	Validation Issues	375
6.	Conclusion.....	376
	Acknowledgements	377
	<i>Questions for Discussion</i>	378
	<i>References</i>	378
	<i>Suggested Reading</i>	379
	<i>Online Resources</i>	379

Chapter 17: Integrated Health Alerting And Notification: A Case Study in New York State

LINH H. LE, DEBRA L. SOTTOLANO AND IVAN J. GOTHAM

1.	Introduction	382
2.	An Infrastructure for Health Alert and Notification Systems.....	383
3.	Requirements for a Health Alert and Notification System.....	384
3.1	System Architecture.....	384
3.1.1	System Components	387
3.1.2	Unified Messaging Concept.....	388
3.1.3	NYSDOH Communication Directory.....	389
3.1.4	Data Integration and Communication Using XML Messaging.....	390
3.1.5	Communication Methods.....	391

3.2	Standard Alert Message Distribution Framework for Data Sharing Among Emergency Information Systems	392
4.	Case Study	393
5.	Discussion.....	399
6.	Conclusions	400
	Acknowledgements	401
	<i>Questions for Discussion</i>	402
	<i>References</i>	403
	<i>Suggested Reading</i>	404
	<i>Online Resources</i>	404

Chapter 18: Design and Performance of A Public Health Preparedness Informatics Framework: Evidence from an Exercise Simulating an Influenza Outbreak

IVAN J. GOTHAM, DEBRA L. SOTTOLANO, LINH H. LE, MICHAEL J. PRIMEAU, LORETTA A. SANTILLI, GERALDINE S. JOHNSON, STEPHANIE E. OSTROWSKI AND MARY E. HENNESSEY

1.	Introduction	406
2.	Model Informatics Framework for Health Information Exchange	410
3.	New York State’s Informatics Framework for Health Information Exchange and Integral Support of Public Health Preparedness	411
4.	Evaluation of Framework Response During A Full-Scale Exercise	415
	4.1 Exercise Scenario, Scope, and Extent.....	415
	4.2 Preparedness Functions Used in the Exercise.....	415
	4.3 Exercise Injects and Data Pushed to Exercise Participants.....	417
	4.4 Methodology Used in Measuring Preparedness Function Responses.....	419
	4.5 Responses to Informational and PHEP Action-Request Injects.....	420
	4.6 Responses to Operational Data Injects.....	422
	4.7 Accessing Health Alert Postings by Key Roles at Local Health Departments and Hospitals.....	424
	4.8 Usage of CDEX Event-Specific Web Site for Situational Awareness.....	424
	4.9 Executive DashBoard Usage for Situational Awareness by Key Decision Makers	428
5.	Discussion and Lessons Learned.....	430
	5.1 How Well Did the Observed Exercise Responses Meet Expectations?	430

- 5.2 How Does the HCS Informatics Framework Enable a State of PHEP “Readiness”? 431
- 6. Conclusions 433
- Acknowledgements 433
- Questions for Discussion* 434
- References* 434
- Suggested Reading*..... 437
- Online Resources*..... 437

Chapter 19: System Evaluation and User Technology Adoption: A Case Study of BioPortal

PAUL JEN-HWA HU, DANIEL ZENG AND HSINCHUN CHEN

- 1. Introduction 440
- 2. An Overview of Bioportal 442
- 3. An Experiment-Based Evaluation Study and Key Results 443
 - 3.1 Hypotheses 444
 - 3.2 Experimental Design 445
 - 3.3 Measurements 445
 - 3.4 Subjects 446
 - 3.5 Experimental Tasks 446
 - 3.6 Data Collection 446
 - 3.7 Evaluation Results 447
- 4. A Field User Study and Key Results 448
 - 4.1 Research Questions 448
 - 4.2 Measurements 448
 - 4.3 Subjects 449
 - 4.4 Tasks 449
 - 4.5 Evaluation Results 449
- 5. Conclusion 450
- Questions for Discussion* 451
- Appendix 1: Listing of Question Items Used in the Evaluation Studies (Illustrated Using BioPortal)* 451
- Appendix 2: Listing of Analysis Scenarios and Tasks Used in the Experiment-based Evaluation Study* 453
- Appendix 3: Listing of Analysis Scenarios and Tasks Used in the Field Evaluation Study* 454
- References* 455
- Suggested Reading*..... 456
- Online Resources*..... 457

Chapter 20: Syndromic Surveillance for the G8 Hokkaido Toyako Summit Meeting

YASUSHI OHKUSA, TAMIE SUGAWARA, HIROAKI SUGIURA,
KAZUO KODAMA, TAKUSHI HORIE, KIYOSHI KIKUCHI, KIYOSU
TANIGUCHI AND NOBUHIKO OKABE

1. Introduction	460
2. Background.....	461
3. Methods	462
3.1 Syndromic Surveillance for Prescriptions.....	462
3.2 Syndromic Surveillance for Ambulance Transfer	465
3.3 Syndromic Surveillance for OTC Drug Sales.....	467
3.4 Joint Conference for Evaluation of Aberration Signals from the Syndromic Surveillance System.....	468
4. Results	468
5. Conclusions and Discussion	470
6. Other Syndromic Surveillance Systems at the Experimental Level in Japan.....	471
6.1 Syndromic Surveillance from EMRs	471
6.2 Syndromic Surveillance from Orders for Medical Examinations.....	475
6.3 Syndromic Surveillance from Absenteeism at School.....	475
6.4 Syndromic Surveillance for Nosocomial Outbreak	476
Acknowledgement.....	476
<i>Questions for Discussion</i>	476
<i>References</i>	477
<i>Suggested Reading</i>	477
Index.....	479
