

Contents

Contents of Volumes II and III	xi
Preface	xiii
1 Basic Theory of ODE and Vector Fields	1
1 The derivative	3
2 Fundamental local existence theorem for ODE.....	9
3 Inverse function and implicit function theorems.....	12
4 Constant-coefficient linear systems; exponentiation of matrices	16
5 Variable-coefficient linear systems of ODE: Duhamel’s principle...	26
6 Dependence of solutions on initial data and on other parameters....	31
7 Flows and vector fields.....	35
8 Lie brackets.....	40
9 Commuting flows; Frobenius’s theorem	43
10 Hamiltonian systems	47
11 Geodesics	51
12 Variational problems and the stationary action principle.....	59
13 Differential forms	70
14 The symplectic form and canonical transformations	83
15 First-order, scalar, nonlinear PDE.....	89
16 Completely integrable hamiltonian systems	96
17 Examples of integrable systems; central force problems.....	101
18 Relativistic motion	105
19 Topological applications of differential forms.....	110
20 Critical points and index of a vector field.....	118
A Nonsmooth vector fields	122
References	125
2 The Laplace Equation and Wave Equation	127
1 Vibrating strings and membranes.....	129
2 The divergence of a vector field	140
3 The covariant derivative and divergence of tensor fields	145
4 The Laplace operator on a Riemannian manifold	153
5 The wave equation on a product manifold and energy conservation	156
6 Uniqueness and finite propagation speed	162
7 Lorentz manifolds and stress-energy tensors	166
8 More general hyperbolic equations; energy estimates.....	172

9	The symbol of a differential operator and a general Green–Stokes formula	176
10	The Hodge Laplacian on k -forms	180
11	Maxwell’s equations	184
	References	194
3	Fourier Analysis, Distributions, and Constant-Coefficient Linear PDE	197
1	Fourier series	198
2	Harmonic functions and holomorphic functions in the plane	209
3	The Fourier transform	222
4	Distributions and tempered distributions	230
5	The classical evolution equations	244
6	Radial distributions, polar coordinates, and Bessel functions	263
7	The method of images and Poisson’s summation formula	273
8	Homogeneous distributions and principal value distributions	278
9	Elliptic operators	286
10	Local solvability of constant-coefficient PDE	289
11	The discrete Fourier transform	292
12	The fast Fourier transform	301
A	The mighty Gaussian and the sublime gamma function	306
	References	312
4	Sobolev Spaces	315
1	Sobolev spaces on \mathbb{R}^n	315
2	The complex interpolation method	321
3	Sobolev spaces on compact manifolds	328
4	Sobolev spaces on bounded domains	331
5	The Sobolev spaces $H_0^s(\Omega)$	338
6	The Schwartz kernel theorem	345
7	Sobolev spaces on rough domains	349
	References	351
5	Linear Elliptic Equations	353
1	Existence and regularity of solutions to the Dirichlet problem	354
2	The weak and strong maximum principles	364
3	The Dirichlet problem on the ball in \mathbb{R}^n	373
4	The Riemann mapping theorem (smooth boundary)	379
5	The Dirichlet problem on a domain with a rough boundary	383
6	The Riemann mapping theorem (rough boundary)	398
7	The Neumann boundary problem	402
8	The Hodge decomposition and harmonic forms	410
9	Natural boundary problems for the Hodge Laplacian	421
10	Isothermal coordinates and conformal structures on surfaces	438
11	General elliptic boundary problems	441
12	Operator properties of regular boundary problems	462

A	Spaces of generalized functions on manifolds with boundary	471
B	The Mayer–Vietoris sequence in deRham cohomology	475
	References	478
6	Linear Evolution Equations	481
1	The heat equation and the wave equation on bounded domains	482
2	The heat equation and wave equation on unbounded domains	490
3	Maxwell’s equations	496
4	The Cauchy–Kowalewsky theorem	499
5	Hyperbolic systems	504
6	Geometrical optics	510
7	The formation of caustics	518
8	Boundary layer phenomena for the heat semigroup	535
A	Some Banach spaces of harmonic functions	541
B	The stationary phase method	543
	References	545
A	Outline of Functional Analysis	549
1	Banach spaces	549
2	Hilbert spaces	556
3	Fréchet spaces; locally convex spaces	561
4	Duality	564
5	Linear operators	571
6	Compact operators	579
7	Fredholm operators	593
8	Unbounded operators	596
9	Semigroups	603
	References	615
B	Manifolds, Vector Bundles, and Lie Groups	617
1	Metric spaces and topological spaces	617
2	Manifolds	622
3	Vector bundles	624
4	Sard’s theorem	626
5	Lie groups	627
6	The Campbell–Hausdorff formula	630
7	Representations of Lie groups and Lie algebras	632
8	Representations of compact Lie groups	636
9	Representations of $SU(2)$ and related groups	641
	References	647
	Index	649

Contents of Volumes II and III

Volume II: Qualitative Studies of Linear Equations

- 7 Pseudodifferential Operators**
- 8 Spectral Theory**
- 9 Scattering by Obstacles**
- 10 Dirac Operators and Index Theory**
- 11 Brownian Motion and Potential Theory**
- 12 The $\bar{\partial}$ -Neumann Problem**
- C Connections and Curvature**

Volume III: Nonlinear Equations

- 13 Function Space and Operator Theory for Nonlinear Analysis**
- 14 Nonlinear Elliptic Equations**
- 15 Nonlinear Parabolic Equations**
- 16 Nonlinear Hyperbolic Equations**
- 17 Euler and Navier–Stokes Equations for Incompressible Fluids**
- 18 Einstein's Equations**
