## Contents

1 **Introduction** ................................................................. 1  
1.1 An Overview on Cooperative Communications .......... 1  
1.2 Brief History of Cooperative and Relay Channels .... 5  
1.3 Standardization of Cooperative Communication and Relay Technology ........................................ 6  
1.4 Book Outline ............................................................... 8  
References ................................................................. 10  

2 **Review of Wireless Communications and MIMO Techniques** ................................................. 15  
2.1 Characteristics of Wireless Channels ..................... 15  
2.1.1 Path Loss .......................................................... 15  
2.1.2 Shadowing Effect ............................................ 18  
2.1.3 Multipath Fading ............................................ 19  
2.2 Techniques to Exploit Spatial Diversity ................. 25  
2.2.1 Single-Input Multiple-Output (SIMO) System ....... 26  
2.2.2 Multiple-Input Single-Output (MISO) System ....... 35  
2.2.3 Multiple-Input Multiple-Output (MIMO) System ...... 44  
2.3 Capacity of Wireless Channels ............................... 48  
2.3.1 Capacity of AWGN Channels .............................. 48  
2.3.2 Capacity of Flat Fading Channels .................... 49  
2.3.3 Capacity with Multiple Antennas ...................... 52  
2.4 Diversity-and-Multiplexing Tradeoff .................... 58  
References ................................................................. 63  

3 **Two-User Cooperative Transmission Schemes** .... 67  
3.1 Decode-and-Forward Relaying Schemes .................... 67  
3.1.1 Basic DF Relaying Scheme ................................. 68  
3.1.2 Selection DF Relaying Scheme ......................... 78  
3.1.3 Demodulate-and-Forward Relaying Scheme .......... 81  
3.2 Amplify-and-Forward Relaying Schemes .................. 87  
References ................................................................. 97
3.2.1 Basic AF Relaying Scheme .......................... 88
3.2.2 Incremental AF Relaying Scheme .................... 100
3.3 Coded Cooperation ..................................... 102
  3.3.1 Basic Coded Cooperation Scheme ................. 103
  3.3.2 User Multiplexing for Coded Cooperation ....... 106
3.4 Compress-and-Forward Relaying Schemes .............. 114
3.5 Channel Estimation in Single Relay Systems .......... 115
References ................................................. 120

4 Cooperative Transmission Schemes with Multiple Relays . 125
  4.1 Orthogonal Cooperation .............................. 126
    4.1.1 Orthogonal Cooperation with AF Relays ......... 127
    4.1.2 Orthogonal Cooperation with DF Relays ........ 133
  4.2 Transmit Beamforming ............................... 135
    4.2.1 Transmit Beamforming with AF Relays .......... 135
    4.2.2 Transmit Beamforming with DF Relays .......... 141
  4.3 Selective Relaying .................................. 146
    4.3.1 Selective Relaying with AF Relays ............ 147
    4.3.2 Selective Relaying with DF Relays ............ 150
  4.4 Distributed Space-Time Coding (DSTC) ............... 153
    4.4.1 Distributed Space-Time Coding with DF Relays . 153
    4.4.2 Distributed Space-Time Coding with AF Relays . 161
  4.5 Channel Estimation in Multi-Relay Systems .......... 168
    4.5.1 Training Design for AF Multi-Relay Systems ... 168
    4.5.2 Training Design for DF Multi-Relay Systems ... 173
  4.6 Other Topics on Multi-Relay Cooperative Communications . 178
    4.6.1 Multi-Hop Cooperative Transmissions .......... 178
    4.6.2 Asynchronous Cooperative Transmissions ....... 187
References ................................................. 190

5 Fundamental Limits of Cooperative and Relay Networks . 193
  5.1 Gaussian Relay Channels .............................. 193
    5.1.1 Cut-Set Bound of Gaussian Relay Channels .... 194
    5.1.2 Decode-and-Forward and Degraded Relay Channels 197
    5.1.3 Compress-and-Forward ........................... 201
  5.2 Single-Relay Fading Channels ......................... 203
    5.2.1 Ergodic Capacity ............................... 203
    5.2.2 Diversity and Multiplexing Tradeoffs ........... 207
  5.3 Multi-Relay Networks ................................ 213
    5.3.1 Upper Bound of Gaussian Multi-Relay Networks ... 214
    5.3.2 Lower bound of Gaussian Multi-Relay Networks and
        Asymptotic Capacity Results ..................... 216
    5.3.3 Multi-Relay Fading Channels .................... 219
References ................................................. 225
6  Cooperative Communications with Multiple Sources  ....... 227
  6.1 Time/Frequency-Division Multiple Access (TDMA/FDMA)  . 227
    6.1.1 Round-Robin Scheduling .............................. 229
    6.1.2 Opportunistic Scheduling ............................ 234
  6.2 Code-Division Multiple Access (CDMA)  .................. 237
    6.2.1 Uplink CDMA with Designated Relays ................ 238
    6.2.2 Uplink CDMA with Shared Relays  ................... 247
  6.3 Space-Division Multiple Access (SDMA) ................... 254
  6.4 Partner Selection Strategies  ........................... 259
    6.4.1 Centralized Partner Selection Strategy .............. 260
    6.4.2 Decentralized Partner Selection Strategy .......... 267
References .................................................................. 268

7  Cooperation Relaying in OFDM and MIMO Systems ........... 271
  7.1 Brief Review of OFDM Systems  ............................. 271
  7.2 Resource Allocation in Pair-Wise Cooperative OFDM Systems 274
    7.2.1 Power Allocation in Pair-Wise Cooperative OFDM Systems .................................................................. 274
    7.2.2 Subcarrier Matching for Pair-Wise Cooperative OFDM Systems ......................................................... 278
  7.3 Cooperative OFDM Systems with Multiple Relays .......... 282
    7.3.1 Cooperative Beamforming for OFDM Multi-Relay Systems ................................................................. 283
    7.3.2 Selective Relaying for OFDM Multi-Relay Systems ... 288
  7.4 Distributed Space-Frequency Codes  ....................... 292
    7.4.1 Decode-and-Forward Space-Frequency Codes ......... 293
    7.4.2 Amplify-and-Forward Space-Frequency Codes ....... 301
  7.5 Cooperation with MIMO Relays  ............................ 305
References .................................................................. 314

8  Medium Access Control in Cooperative Networks ............ 317
  8.1 Cooperation with Slotted ALOHA  ........................... 317
    8.1.1 Definition of Stability Region ......................... 320
    8.1.2 Stability Region of a Cooperative Pair ............... 322
  8.2 Collision Resolution Mechanisms in Cooperative Networks . 329
    8.2.1 Network-Assisted Diversity Multiple Access (NDMA) . 329
    8.2.2 Enhancements to NDMA with Relaying Users ......... 331
  8.3 Cooperation with CSMA/CA  ................................. 332
    8.3.1 Overview of the IEEE 802.11 MAC Protocol .......... 333
    8.3.2 CoopMAC based on the IEEE 802.11 Protocol ....... 336
    8.3.3 Analysis of CoopMAC  ................................ 341
  8.4 Automatic Retransmission reQuest (ARQ) with Cooperative Relays ...................................................... 344
  8.5 Throughput Optimal Scheduling Protocols for Cooperative Networks ....................................................... 347
8.5.1 Review of Throughput Optimal Control Policy for Non-Cooperative Networks ................. 347
8.5.2 Throughput Optimal Control Policy for Cooperative Networks ........................................ 350
References .......................................................... 357

9 Networking and Cross-Layer Issues in Cooperative Networks ................................................. 361
  9.1 QoS in Cooperative Networks ................................................. 361
    9.1.1 QoS of a Simple Relay Network ........................................ 365
    9.1.2 QoS of a Cooperative Pair ........................................... 371
  9.2 Routing in Cooperative Networks ................................................. 373
    9.2.1 General Formulation of Cooperative Routing ....................... 373
    9.2.2 Heuristic Algorithms for Cooperative Routing ................... 379
  9.3 Security Issues in Cooperative Networks ................................................. 383
    9.3.1 Misbehavior in Relay Networks .................................... 383
    9.3.2 Security in Single-Relay Cooperative Networks ................. 385
    9.3.3 Security in Multi-Relay Cooperative Networks ................ 388
References .......................................................... 394
