Contents

1 Anatomy and Histology of Cartilage
   Andrew Horvai
   ........................................................................................................ 1

2 Clinical Aspects: A Rheumatologist’s Perspective
   David J. Hunter
   ........................................................................................................ 11

3 Clinical Aspects: An Orthopedic Surgeon’s Perspective
   Sunny Cheung and C. Benjamin Ma
   ........................................................................................................ 19

4 Conventional Radiography as an Indirect Measure
   for Cartilage Pathology
   Daichi Hayashi, Jeffrey Duryea, Frank W. Roemer,
   and Ali Guermazi
   ........................................................................................................ 27

5 Value of CT Arthrography in the Assessment of Cartilage Pathology
   Patrick Omoumi, Bruno C. Vande Berg, and Frédéric E. Lecouvet
   ........................................................................................................ 37

6 MRI of Cartilage: Standard Techniques
   Thomas M. Link
   ........................................................................................................ 49

7 MRI of Cartilage: Pathological Findings
   Thomas M. Link
   ........................................................................................................ 67

8 Scoring Systems to Semiquantitatively Grade Cartilage
   Pathology with MRI
   Christoph Stehling
   ........................................................................................................ 93

9 Atlas: Cartilage Abnormalities and Scores
   Hans Liebl and Thomas M. Link
   ........................................................................................................ 103

10 Cartilage Segmentation
    Julio Carballido-Gamio and Thomas M. Link
    ....................................................................................................... 117

11 Quantitative MR Imaging of Cartilage Morphology in Osteoarthritis
    Felix Eckstein, Martin Hudelmaier, and Wolfgang Wirth
    ....................................................................................................... 127

12 MR T2 Relaxation Time Measurements for Cartilage and Menisci
    Thomas Baum, Thomas M. Link, and Bernard J. Dardzinski
    ....................................................................................................... 145

13 MR T1 Relaxation Time Quantification in Cartilage
    Xiaojuan Li
    ....................................................................................................... 159
14 Cartilage Matrix Assessment Using dGEMRIC ................................................... 171 
   Martha L. Gray and Deborah Burstein

15 Imaging of Cartilage Repair ..................................................... 185 
   Goetz H. Welsch, Stephan Domayer, Vladimir Juras, Tallal C. Mamisch, 
   and Siegfried Trattnig

16 Cartilage as a Biomarker ........................................................... 205 
   Thomas M. Link

17 Frontiers in Molecular Imaging of Cartilage: Future Developments ............ 213 
   Ravinder Reddy, Arijitt Borthakur, Walter R.T. Witschey, 
   and J. Bruce Kneeland

18 Future Perspective and Significance of Cartilage Imaging 
   and Quantification ............................................................ 229 
   Thomas M. Link and Sharmila Majumdar

Index .................................................................................. 239
Cartilage Imaging
Significance, Techniques, and New Developments
Link, Th.M. (Ed.)
2011, XI, 245 p., Hardcover
ISBN: 978-1-4419-8437-1
