1	Why Prioritization, Why Ranking	1
1.1	Motivating Issues and Situations	1
1.1.1	Chemicals	1
1.1.2	Child Well-Being	1
1.1.3	Regional Pollution	2
1.1.4	Integrity of Watersheds	2
1.1.5	Surface Water Management Strategies	2
1.2	Composite Indicators	3
1.3	What Does Partial Order Offer with the Composite Indicator Given?	3
1.4	What Does Partial Order Offer More Generally?	5
1.5	Important Questions and Concepts Involving Partial Order	5
1.6	Pertinent Issues and Questions	7
1.6.1	Weights and Indicator Values	7
1.6.2	Problems with Averaging	7
1.6.3	Associations and Implications of Indicators	7
1.6.4	Prioritization and Ranking for a Subset of Objects (“Hot Spots”)	8
1.6.5	How Do We See the Role of Indicators in Terms of Single Objects?	9
1.6.6	Proximity Analysis	9
1.6.7	What to do with supervised classification?	9
1.6.8	Visualization in Multi-indicator Systems	10
1.7	Organization of Our Book	10
	References	11
2	Partial Order and Hasse Diagrams	13
2.1	Data Matrix	13
2.2	Characteristics of Partial Order	14
2.2.1	Axioms	14
2.2.2	Quotient and Object Sets	15
2.3	Product Order	15
2.3.1	Notation	15
2.3.2	Example	17

2.4	Some Basic Concepts	17
2.5	Hasse Diagram	19
2.6	Components	21
2.7	ζ Matrix and Other Representations of Partial Order	22
2.8	Summary and Commentary	23
	References	23
3	Simple Combinatorial Structures	25
3.1	Order Preserving Maps	25
3.2	Linear Extensions	26
3.3	Real-Life Example	30
3.4	Dimension	32
	3.4.1 Motivation	32
	3.4.2 Theoretical Conceptualization	33
3.5	POSAC	34
	3.5.1 Overview	34
	3.5.2 A Perceptive Introduction	34
3.6	Down Sets and Up Sets	36
	3.6.1 Complex Hasse Diagrams	36
	3.6.2 Principal Down Sets and Up Sets, and Successors and Predecessors	38
3.7	Ranking Interval	39
	3.7.1 Index	39
	3.7.2 A Relation Between (X, IB) and $(X, \{\Gamma\})$	39
3.8	Summary and Commentary	41
	References	41
4	Sensitivity and Ambiguity	43
4.1	Tasks	43
4.2	Attribute-Related Sensitivity	43
	4.2.1 Concept	43
	4.2.2 Counting the Mismatches Using Down Sets	44
	4.2.3 Counting the Mismatches Using ζ Matrices	45
	4.2.4 Relation Between $W(q_i)$ and $D^2(q_i)$	45
	4.2.5 Remarks	45
	4.2.6 Illustrative Example	46
4.3	Ambiguity Due to Augmentation of Indicator Sets	48
	4.3.1 Concept	48
	4.3.2 Illustrative Example	49
4.4	Graphs of Characteristic Properties of a Poset	50
	4.4.1 Concept	50
	4.4.2 Remarks	51
	4.4.3 Illustrative Example	51
4.5	Summary and Commentary	54
	References	55

5	Structures of Partial Orders	57
5.1	Motivation	57
5.2	Levels and Shapes of a Hasse Diagram	57
5.2.1	Width and Height	57
5.2.2	Level	58
5.2.3	Shapes of Hasse Diagrams	59
5.2.4	Shapes and Weak or Linear Orders	61
5.3	Down Sets and Up Sets Related to Properties of the Data Matrix	61
5.3.1	Idea	61
5.3.2	Realization	61
5.3.3	Illustrative Example	62
5.4	Separation of Object Subsets	62
5.4.1	Motivation	62
5.4.2	Separated Subsets, an Illustrative Example	63
5.4.3	Articulation Points and Separated Object Subsets	63
5.4.4	Separability	64
5.5	Data Matrix and Separation of Object Subsets in Partial Order	66
5.5.1	Motivation	66
5.5.2	Antagonism	66
5.5.3	If $ AIB > 2$, Then What?	68
5.6	Dominance and Separability	71
5.6.1	Motivation	71
5.6.2	Concept	71
5.6.3	Is the Dominance Relation a Partial Order?	72
5.6.4	Illustrative Example	72
5.7	Summary and Commentary	74
	References	74
6	Hasse Diagrams Based on Transformed Data Matrices	75
6.1	Motivation	75

Ranking and Prioritization for Multi-indicator Systems

Introduction to Partial Order Applications

Brüggemann, R.; Patil, G.P.

2011, XXVI, 338 p., Hardcover

ISBN: 978-1-4419-8476-0
