

Contents

1	What This Book Is and Is Not	1
2	Brief Introduction	5
3	Overview of Proofs	7
3.1	A Few Preliminary Definitions	7
3.2	Elliptic Equations and Boundary Value Problems.....	8
3.3	The Simplest Subelliptic Case	9
3.4	Subelliptic Estimates	11
3.5	Local C^∞ Regularity	13
3.6	Proving C^∞ Regularity.....	14
3.7	Gevrey Regularity.....	15
3.8	Elliptic Operators	16
	3.8.1 Symmetrization of the Estimates	16
	3.8.2 Proof via the Norm Estimate	19
3.9	Nonelliptic Operators	20
	3.9.1 The Baouendi–Goulaouic Example; Sharpness.....	20
3.10	The Analyticity Problem and Its Solution	21
	3.10.1 Obstructions to Proving Analyticity	21
	3.10.2 Why the Most Naive Approach Fails.....	21
	3.10.3 The Flavor of Our Methods	23
	3.10.4 The Construction of $(T^p)_\varphi$	25
3.11	The Role of Strictness	28
3.12	Treves’ Conjecture	28
	3.12.1 A Particular Case	29
3.13	Counterexamples in the Complex Domain	30
3.14	AHE for $D_{x_1}^2 + x_1^{2k} D_{x_2}^2$ (No $(T^p)_\varphi$ Needed!)	31

4	Full Proof for the Heisenberg Group	33
4.1	The Model Operator	33
4.1.1	T Derivatives	34
4.1.2	Z Derivatives	35
4.2	The End of the Proof for the Heisenberg Group	37
5	Coefficients	41
5.1	How Special Is the Heisenberg Model?	41
5.2	Rigid Coefficients: T Derivatives	42
5.3	Our Estimates and How We Use Them	44
5.4	Pure Z and Mixed Derivatives	46
5.5	Formal Observations	49
5.6	Nonrigid Coefficients	57
6	Pseudodifferential Problems	65
6.1	Generalization to Pseudodifferential Operators	65
6.2	The Microlocal $(T^p)_{\varphi\psi\lambda}$	67
6.3	Brackets with Coefficients	68
7	General Sums of Squares of Real Vector Fields	71
7.1	A Little History	71
7.2	Proof for a Sum of Monomials	72
7.3	Partial Regularity	73
7.4	Other Special Cases, Leading to a General Conjecture	78
7.5	The General Conjecture and Result	79
8	The $\bar{\partial}$-Neumann Problem and the Boundary Laplacian on Strictly Pseudoconvex Domains	81
8.1	Statement of the Theorems	82
8.2	Notation and a Priori Estimates	83
8.2.1	Maximal Estimate	84
8.3	The Heat Equation for \square_b	88
8.4	Weakly Pseudoconvex Domains	89
8.5	Global Regularity	89
9	Symmetric Degeneracies	91
9.1	Weakly Pseudoconvex Domains	91
10	Details of the Previous Chapter	99
10.1	Statement of the Theorems	99
10.2	The Vector Field M and the Localization	100
10.3	Behavior of the Localized Operators	108

10.4	Proof of Theorem 10.1	114
10.5	Proof of Theorem 10.2	118
10.6	End of the Proof of Theorem 10.2	122
11	Nonsymplectic Strata and Germ Analytic Hypoellipticity	131
11.1	Proof for Hanges' Operator (11.1)	132
11.2	A More Complicated Example	134
11.3	The General Scheme	135
11.4	The Vector Field M and the Localization	136
11.5	The Commutation Relations for R_φ^p	137
11.6	The Bracket $[X_2, R_\varphi^p]$	137
11.7	The Bracket $[X_1, R_\varphi^p]$	138
11.8	Proof of Theorem 11.1	144
11.9	Nonclosed Bicharacteristics with Nontrivial Limit Set	150
12	Operators of Kohn Type That Lose Derivatives	153
12.1	Observations and Simplifications	154
12.2	The Localization of High Powers of T	154
12.3	The Recurrence	155
12.4	Conclusion of the Proof	156
12.5	Gevrey Regularity for Kohn–Oleinik Operators	157
13	Nonlinear Problems	159
13.1	Global Regularity	159
13.2	Some Notation and Definitions	160
13.3	Maximal Estimates	162
13.4	High Powers of the Vector Field T	165
13.5	Mixed Derivatives: The Case of Global X	171
13.6	Locally Defined X_j	172
13.7	High Powers of X ; New Localizing Functions	174
13.8	The Localizing Functions	175
13.9	Taking a Localizing Function out of the Norm	176
13.10	Local Regularity	179
13.11	Results	179
13.12	Proof	180
13.13	Passing to Another Localizing Function	184
13.14	Reducing the Order by Half; the End of the Proof	186
13.15	The Width of the Critical Band	187
13.16	The Faà di Bruno Formula	188
14	Treves' Approach	191
15	Appendix	195
15.1	A Discussion of the Localizing Functions	195

15.2	The Analytical Material Used	197
15.2.1	Some Fourier Analysis and Sobolev Spaces	197
15.2.2	The Heisenberg Group	197
15.2.3	Pseudodifferential Operators	197
References	199
