Contents

1 Shoot and Collapse of Dry and Liquid Transportation Markets: The Credit Crunch Effect ................................................................. 1
  1.1 Introduction ................................................................................. 1
  1.2 Over Optimistic and Pessimistic Business Life: Boom and Bust Cycle ................................................................. 2
  1.3 Order Backlog of Dry and Liquid Bulk Vessels ......................... 5
  1.4 Development of Dry and Liquid Sea Transportation After Credit Crunch ................................................................. 6
  1.5 Conclusions ................................................................................. 9
  References ....................................................................................... 10

2 The Tanker Shipping Market ............................................................... 13
  2.1 Introduction ................................................................................. 13
  2.2 Tanker Shipping ......................................................................... 14
    2.2.1 Seaborne Trade ....................................................................... 15
    2.2.2 Freight Rate ........................................................................... 15
    2.2.3 New Building Vessel .............................................................. 16
    2.2.4 Second-Hand Vessel .............................................................. 16
    2.2.5 Scrapping Vessel ................................................................. 17
  2.3 Research Design .......................................................................... 18
  2.4 Tests and Results. ........................................................................ 18
    2.4.1 The Four Shipping Markets .................................................. 18
    2.4.2 Trade Volume and Fleet Size ................................................. 18
    2.4.3 Vessel Prices ......................................................................... 21
  2.5 Discussions and Conclusions. ....................................................... 22
  References ....................................................................................... 24
3 Oil Tanker Economics: A Case of Oligopsony or of Perfect Competition? .......................................................... 27
  3.1 Historical Development of Oil Market ..................................................... 27
  3.2 Literature Review ............................................................................. 31
  3.3 The Policy of Oil Majors ................................................................. 35
  3.4 Reduction of Transport Costs (1950–1972) ........................................... 39
    3.4.1 Perfect Competition Among Oligopsonies? ...................... 40
    3.4.2 What is a Market? ............................................................... 40
  3.5 Oil Majors and Independents at Risk (1973–2011) ............................ 41
    3.5.1 Developments in the Tanker Market After 1973 ............... 42
    3.5.2 Increased Market Risk is the Price of Adopting
         ‘Perfect Competition’ in Tanker Markets ....................... 43
    3.5.3 Complete Studies for the Impact of Tanker Size
         and Spot Market on Risk (After 2003) ......................... 44
  3.6 The Structure of Tanker Market, 1973–2009 ..................................... 46
    3.6.1 The Herfindahl Index ......................................................... 46
    3.6.2 Oil Companies as Tanker Owners ...................................... 47
    3.6.3 A Duopoly Cournot Model in Tanker Market? .............. 48
    3.6.4 New Developments During the 1980s and Early 1990s
         in Large Firms ................................................................. 50
    3.6.5 The Concentration Ratio .................................................... 50
  3.7 Conclusions .................................................................................... 52
  Appendix A: Monopsony Model .......................................................... 53
  Appendix B: Recommended Essays .................................................... 55
  Appendix C: Oil Traders (Vitol) .......................................................... 56
References .......................................................................................... 59

4 Oil- and Coal-Based Sea Transportation Needs:
An Integrated Forecasting Approach .................................................. 63
  4.1 Introduction .................................................................................. 63
  4.2 Unbalanced Consumption and Production of Oil and Coal .......... 64
  4.3 Long Term Projections from Oil and Coal Industry Statistics ... 66
  4.4 Using System Dynamics to Forecast Two Decades
      of Sea Transportation Needs ................................................... 70
  4.5 Conclusions ................................................................................ 72
  Appendix A ....................................................................................... 74
References ........................................................................................ 76

5 Railway-Based Oil Transportation Chain Infrastructure Needs:
A System Dynamics Approach .......................................................... 77
  5.1 Introduction ................................................................................ 77
  5.2 Oil Transportation and System Dynamics Modeling ................... 79
  5.3 Research Environment and Introduction
      to the Simulation Model .......................................................... 80
5.4 System Dynamics Simulation Results from Growth Scenario, Where Muuga Harbour Holds Its Share from Intra-Country Alternatives. 84
5.5 Conclusions 88
References 89

6 Transportation Logistics: A Case Study of Bio-Diesel Factory Location Plans 91
6.1 Introduction 91
6.2 Fischer–Tropsch Process in Historical Perspective 92
6.4 Decision-Making Hierarchy for Bio-Diesel Plant Location Problem from Logistics Perspective 96
6.5 Conclusions 102
