Part I Methods of 3D Computer Vision

1	Triangulation-Based Approaches to Three-Dimensional Scene Reconstruction	3
1.1	The Pinhole Model	3
1.2	Geometric Aspects of Stereo Image Analysis	6
1.2.1	Euclidean Formulation of Stereo Image Analysis	6
1.2.2	Stereo Image Analysis in Terms of Projective Geometry	8
1.3	The Bundle Adjustment Approach	14
1.4	Geometric Calibration of Single and Multiple Cameras	15
1.4.1	Methods for Intrinsic Camera Calibration	15
1.4.2	The Direct Linear Transform (DLT) Method	16
1.4.3	The Camera Calibration Method by Tsai (1987)	19
1.4.4	The Camera Calibration Method by Zhang (1999a)	20
1.4.5	The Camera Calibration Toolbox by Bouguet (2007)	23
1.4.6	Self-calibration of Camera Systems from Multiple Views of a Static Scene	23
1.4.7	Semi-automatic Calibration of Multiocular Camera Systems	30
1.4.8	Accurate Localisation of Chequerboard Corners	39
1.5	Stereo Image Analysis in Standard Geometry	52
1.5.1	Image Rectification According to Standard Geometry	52
1.5.2	The Determination of Corresponding Points	55
1.6	Resolving Stereo Matching Errors due to Repetitive Structures Using Model Information	74
1.6.1	Plane Model	76
1.6.2	Multiple-plane Hand–Arm Model	79
1.6.3	Decision Feedback	79
1.6.4	Experimental Evaluation	81
1.6.5	Discussion	87

2	Three-Dimensional Pose Estimation and Segmentation Methods . . .	89
2.1	Pose Estimation of Rigid Objects	89
2.1.1	General Overview	90
2.1.2	Template-Based Pose Estimation	94
2.2	Pose Estimation of Non-rigid and Articulated Objects	97
2.2.1	General Overview	97
2.2.2	Three-Dimensional Active Contours	104
2.2.3	Three-Dimensional Spatio-Temporal Curve Fitting	109
2.3	Point Cloud Segmentation Approaches	122
2.3.1	General Overview	123
2.3.2	Mean-Shift Tracking of Human Body Parts	126
2.3.3	Segmentation and Spatio-Temporal Pose Estimation	129
2.3.4	Object Detection and Tracking in Point Clouds	134
3	Intensity-Based and Polarisation-Based Approaches to Three-Dimensional Scene Reconstruction	139
3.1	Shape from Shadow	139
3.1.1	Extraction of Shadows from Image Pairs	140
3.1.2	Shadow-Based Surface Reconstruction from Dense Sets of Images	142
3.2	Shape from Shading	143
3.2.1	The Bidirectional Reflectance Distribution Function (BRDF)	144
3.2.2	Determination of Surface Gradients	148
3.2.3	Reconstruction of Height from Gradients	153
3.2.4	Surface Reconstruction Based on Partial Differential Equations	155
3.3	Photometric Stereo	158
3.3.1	Photometric Stereo: Principle and Extensions	158
3.3.2	Photometric Stereo Approaches Based on Ratio Images	160
3.4	Shape from Polarisation	163
3.4.1	Surface Orientation from Dielectric Polarisation Models	163
3.4.2	Determination of Polarimetric Properties of Rough Metallic Surfaces for Three-Dimensional Reconstruction Purposes	166
4	Point Spread Function-Based Approaches to Three-Dimensional Scene Reconstruction	171
4.1	The Point Spread Function	171
4.2	Reconstruction of Depth from Defocus	172
4.2.1	Basic Principles	172
4.2.2	Determination of Small Depth Differences	176
4.2.3	Determination of Absolute Depth Across Broad Ranges	179
4.3	Reconstruction of Depth from Focus	186

5 Integrated Frameworks for Three-Dimensional Scene Reconstruction 189

5.1 Monocular Three-Dimensional Scene Reconstruction at Absolute Scale 190

5.1.1 Combining Motion, Structure, and Defocus 191

5.1.2 Online Version of the Algorithm 192

5.1.3 Experimental Evaluation Based on Tabletop Scenes 192

5.1.4 Discussion 201

5.2 Self-consistent Combination of Shadow and Shading Features 202

5.2.1 Selection of a Shape from Shading Solution Based on Shadow Analysis 203

5.2.2 Accounting for the Detailed Shadow Structure in the Shape from Shading Formalism 206

5.2.3 Initialisation of the Shape from Shading Algorithm Based on Shadow Analysis 207

5.2.4 Experimental Evaluation Based on Synthetic Data 209

5.2.5 Discussion 210

5.3 Shape from Photopolarimetric Reflectance and Depth 211

5.3.1 Shape from Photopolarimetric Reflectance 213

5.3.2 Estimation of the Surface Albedo 217

5.3.3 Integration of Depth Information 218

5.3.4 Experimental Evaluation Based on Synthetic Data 222

5.3.5 Discussion 227

5.4 Stereo Image Analysis of Non-Lambertian Surfaces 228

5.4.1 Iterative Scheme for Disparity Estimation 231

5.4.2 Qualitative Behaviour of the Specular Stereo Algorithm 234

5.5 Combination of Shape from Shading and Active Range Scanning Data 235

5.6 Three-Dimensional Pose Estimation Based on Combinations of Monocular Cues 238

5.6.1 Photometric and Polarimetric Information 239

5.6.2 Edge Information 240

5.6.3 Defocus Information 241

5.6.4 Total Error Optimisation 241

5.6.5 Experimental Evaluation Based on a Simple Real-World Object 242

5.6.6 Discussion 244

Part II Application Scenarios

6 Applications to Industrial Quality Inspection 247

6.1 Inspection of Rigid Parts 248

6.1.1 Object Detection by Pose Estimation 248

6.1.2 Pose Refinement 252

6.2 Inspection of Non-rigid Parts 257

6.3 Inspection of Metallic Surfaces 260

- 6.3.1 Inspection Based on Integration of Shadow and Shading
Features 261
- 6.3.2 Inspection of Surfaces with Non-uniform Albedo 261
- 6.3.3 Inspection Based on SfPR and SfPRD 263
- 6.3.4 Inspection Based on Specular Stereo 270
- 6.3.5 Inspection Based on Integration of Photometric Image
Information and Active Range Scanning Data 277
- 6.3.6 Discussion 279
- 7 Applications to Safe Human–Robot Interaction 281**
 - 7.1 Vision-Based Human–Robot Interaction 281
 - 7.1.1 Vision-Based Safe Human–Robot Interaction 282
 - 7.1.2 Pose Estimation of Articulated Objects in the Context
of Human–Robot Interaction 285
 - 7.2 Object Detection and Tracking in Three-Dimensional Point
Clouds 289
 - 7.3 Detection and Spatio-Temporal Pose Estimation of Human Body
Parts 291
 - 7.4 Three-Dimensional Tracking of Human Body Parts 294
 - 7.4.1 Image Acquisition 294
 - 7.4.2 Data Set Used for Evaluation 295
 - 7.4.3 Fusion of the ICP and MOCCD Poses 297
 - 7.4.4 System Configurations Regarded for Evaluation 299
 - 7.4.5 Evaluation Results 300
 - 7.4.6 Comparison with Other Methods 304
 - 7.4.7 Evaluation of the Three-Dimensional Mean-Shift Tracking
Stage 306
 - 7.4.8 Discussion 308
 - 7.5 Recognition of Working Actions in an Industrial Environment . . . 308
- 8 Applications to Lunar Remote Sensing 311**
 - 8.1 Three-Dimensional Surface Reconstruction Methods
for Planetary Remote Sensing 311
 - 8.1.1 Topographic Mapping of the Terrestrial Planets 311
 - 8.1.2 Reflectance Behaviour of Planetary Regolith Surfaces . . . 315
 - 8.2 Three-Dimensional Reconstruction of Lunar Impact Craters 318
 - 8.2.1 Shadow-Based Measurement of Crater Depth 318
 - 8.2.2 Three-Dimensional Reconstruction of Lunar Impact
Craters at High Resolution 319
 - 8.2.3 Discussion 329
 - 8.3 Three-Dimensional Reconstruction
of Lunar Wrinkle Ridges and Faults 330
 - 8.4 Three-Dimensional Reconstruction of Lunar Domes 333
 - 8.4.1 General Overview of Lunar Domes 333
 - 8.4.2 Observations of Lunar Domes 334

8.4.3	Image-Based Determination of Morphometric Data	339
8.4.4	Discussion	353
9	Conclusion	357
