Contents

1 Multiple Attribute Decision Making in the Manufacturing Environment ........................................ 1
  1.1 Importance of Multiple Attribute Decision Making in the Manufacturing Environment .................. 1
  1.2 Some Important Decision Making Situations of the Manufacturing Environment ......................... 2
  1.3 Multiple Attribute Decision Making Methods ................................................................. 3
  1.4 Overview of the Book ........................................................................................................ 5
  References ............................................................................................................................ 5

2 Improved Multiple Attribute Decision Making Methods ........ 7
  2.1 Improved Analytic Hierarchy Process Method .............. 7
    2.1.1 Formulating the Decision Table .................. 8
    2.1.2 Deciding Weights of the Attributes ............... 8
    2.1.3 Calculating Composite Performance Scores ....... 10
  2.2 Improved Technique for Order Preference by Similarity to Ideal Solution Method .................. 10
    2.2.1 Formulating the Decision Table .................. 10
    2.2.2 Deciding Weights of the Attributes ............... 11
    2.2.3 Calculating Composite Performance Scores ....... 11
  2.3 Data Envelopment Analysis Method .............................. 12
    2.3.1 The Basic CCR Model ................................. 14
    2.3.2 Strengths and Limitations of Basic CCR Model 15
    2.3.3 Reduced CCR Model ................................. 16
    2.3.4 Improved RCCR/Assurance Region Model ......... 16
  2.4 Improved Preference Ranking Organization Method for Enrichment Evaluations .................... 17
    2.4.1 Formulation of Decision Table .................. 18
    2.4.2 Deciding Weights of the Attributes ............... 18
    2.4.3 Improved PROMETHEE Calculations ........... 18
2.5 Improved ELimination Et Choix Traduisant la REalité Method ................................................................. 21
  2.5.1 Construction of the Decision Table ................................. 22
  2.5.2 Calculating the Weights of the Attributes
      Using AHP ................................................................. 22
  2.5.3 Calculations Using ELECTRE for Final Ranking ............... 22
2.6 Improved COmplex PRoportional ASsessment Method .............. 24
  2.6.1 Construction of the Decision Table ................................. 25
  2.6.2 Calculating the Weights of the Attributes
      Using AHP ................................................................. 25
  2.6.3 COPRAS Calculations for Final Ranking ......................... 25
2.7 Improved Gray Relational Analysis Method ............................ 27
2.8 Improved Utility Additive Method ........................................ 30
2.9 VIKOR Method ............................................................. 33
2.10 Improved Ordered Weighted Averaging Method ......................... 35
References ........................................................................ 38

3 Applications of Improved MADM Methods to the Decision Making
Problems of Manufacturing Environment ........................................ 41
  3.1 Applications of the DEA RCCR/AR Method ............................ 41
      3.1.1 Material Selection for a Given Engineering Application ....... 41
      3.1.2 Metal Stamping Layout Selection ................................ 46
      3.1.3 Modern Machining Method Selection ............................ 49
      3.1.4 Product End-of-Life Scenario Selection ......................... 50
  3.2 Applications of the Improved PROMETHEE Method .................. 52
      3.2.1 Environment Friendly Cutting Fluid Selection
           for a Given Machining Application .............................. 52
      3.2.2 Evaluation of Environmentally Conscious Manufacturing Programs .......................................................... 57
      3.2.3 Product End-of-Life Scenario Selection ......................... 60
      3.2.4 Rapid Prototyping System Selection .............................. 62
      3.2.5 Gear Material Selection ............................................. 64
      3.2.6 Flexible Manufacturing System Selection ....................... 66
      3.2.7 Material Handling Equipment Selection ......................... 67
  3.3 Applications of the Improved ELECTRE Method ......................... 69
      3.3.1 Machine Tool Selection ............................................. 69
      3.3.2 Facility Location Selection ........................................ 73
  3.4 Applications of the Improved COPRAS Method ......................... 74
      3.4.1 Material Selection for Given Engineering Application ........ 74
      3.4.2 Rapid Prototyping System Selection ............................... 76
3.5 Applications of the Improved AHP Method
3.5.1 Environmentally Conscious Manufacturing Program Selection
3.5.2 Selection of Electroplating System
3.6 Applications of the Improved GRA Method
3.6.1 Material Selection for a Given Engineering Application
3.6.2 Rapid Prototyping Process Selection
3.6.3 Plant Layout Design Selection
3.6.4 Product Design Selection of a Power Electronic Device
3.7 Applications of the Improved UTA Method
3.7.1 Machine Group Selection in a Flexible Manufacturing Cell
3.7.2 Vendor Selection
3.8 Applications of the Improved VIKOR Method
3.8.1 Plant Layout Design Selection
3.8.2 Rapid Prototyping System Selection
3.9 Applications of Improved OWA Method
3.9.1 Machine Group Selection in a Flexible Manufacturing Cell
3.9.2 Vendor Selection

References

4 A Novel Subjective and Objective Integrated Multiple Attribute Decision Making Method
4.1 Proposed Novel Multiple Attribute Decision Making Methodology
4.1.1 Preparation of the Decision Table
4.1.2 Determination of Weights of Importance of the Attributes
4.1.3 Computation of Preference Index
4.1.4 Final Selection
4.2 Application of the Novel Subjective and Objective Integrated Method to the Problems of Manufacturing Environment
4.2.1 Material Selection for a High Speed Naval Craft
4.2.2 Material Selection of a Flywheel
4.2.3 Material Selection of a Cryogenic Storage Tank
4.2.4 Industrial Robot Selection
4.2.5 Environment Friendly Cutting Fluid Selection for Given Machining Application
4.2.6 Flexible Manufacturing System Selection
4.3 Discussion
